Enriching Production Ò ke Sandberg 1995 This text aims to present and discuss the innovative Volvo Uddevalla plant, comparing it to other plants - Japanese lean ones and others. The starting point for the book is Volvo’s dramatic decision to close its Uddevalla and Kalmar plants, and the debate that followed this decision, both in Sweden and abroad. Both plants were pioneers of the possibilities to unite productivity and the good work, but, following the announcement of their closure, researchers and practitioners in the field of industrial organization from many countries asked why they closed, how they compared with other production concepts, and whether we now see an end of an alternative to Japanese lean production.

NASA Saturn V 1967-1973 (Apollo 4 to Apollo 17 & Skylab) David Woods 2016-08-01 Few launch vehicles are as iconic and distinctive as NASA’s behemoth rocket, the Saturn V, and none left such a lasting impression on those who watched it ascend. Developed with the specific brief to send humans to the Moon, it pushed rocketry to new scales. Its greatest triumph is that it achieved its goal repeatedly with an enviable record of mission success. Haynes’ Saturn V Manual tells the story of this magnificent and hugely powerful machine. It explains how each of the vehicle’s three stages worked; Boeing’s S-IC first stage with a power output as great as the UK’s peak electricity consumption, North American Aviation’s S-II troubled second stage, Douglas’s workhorse S-IVB third stage with its instrument unit brain - as much a spacecraft as a rocket. From the decision to build it to the operation of its engines’ valves and pumps, this lavishly illustrated and deeply informative book offers a deeper appreciation of the amazing Saturn V.
