President Lincoln’s Spy Steven Wilson 2012-03-01 1861. As the Civil War rages on, one man is determined to prove himself on the front lines of battle. But destiny has far greater plans for him. . . . On the battlefield, Captain Fitz Dunaway is a man of action with a keen, intellectual prowess. But when he humiliates his commanding officer, he finds himself facing a court martial for his maverick behavior. Now his only chance to redeem himself is by working as a spy to uncover a plot to assassinate President Lincoln. Searching through gas-lit alleyways for traitors who will embrace him as one of their own, Fitz discovers just how fine the line is between allegiance to your cause—and allegiance to your country. . . . In President Lincoln’s Spy, Wilson has given us a time machine.” --John Lutz “Steven Wilson writes a story as vivid and engrossing as the Civil War itself.” --Troy Soos “If Robert Ludlum had written a Civil War novel filled with spies, double-crosses, murders, romances, and battlefield mayhem, it would read like President Lincoln’s Spy.” --Clint Johnson, author of Pursuit: The Chase, Capture, Persecution and Surprising Release of Confederate President Jefferson Davis Motor Auto Repair Manual. Parentology Dalton Conley 2014-03-18 An award-winning scientist offers his unorthodox approach to childrearing: “Parentology is brilliant, jaw-droppingly funny, and full of wisdom…bound to change your thinking about parenting and its conventions” (Amy Chua, author of Battle Hymn of the Tiger Mother). If you’re like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In Parentology, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very
Wes Moore, a local student who had just received a Rhodes Scholarship. The story could have been mine. The tragedy is that my story could have been his. In December 2000, the Baltimore Sun ran a small piece about the manhunt, and the trial to its conclusion, he wrote a letter to the other Wes, now a convicted murderer serving a life sentence without the possibility of parole. His letter tentatively asked the questions that had been haunting him: Who are you? How did this happen? That letter led to a correspondence and relationship that have lasted for several years. Over dozens of letters and prison visits, Wes discovered that the other Wes had had a life not unlike his own: Both had had difficult childhoods, both were fatherless; they’d hung out on similar corners with similar crews, and both had run into trouble with the police. At each stage of their young lives they had come across similar moments of decision, yet their choices would lead them to astonishingly different destinies. Told in alternating dramatic narratives that take readers from heart-wrenching losses to moments of surprising redemption, The Other Wes Moore tells the story of a generation of boys trying to find their way in a hostile world. BONUS: This edition contains a new afterword and a discussion guide.

Chilton’s Auto Service Manual 2002 How People Learn National Research Council 2000-08-11 First released in the Spring of 1999, How People Learn has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do—curricula, classroom settings, and teaching methods—to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people notice and how they learn. How People Learn examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.
