1999 Mustang By Design

Mustang By Design was written by Gale Halderman, who designed the classic Mustang muscle car.

The book follows the process of taking a car from sketch to clay model to prototype to preproduction and finally, the finished model is revealed to the public for the first time. The involvement of Henry Ford II is revealed as well as the story of the design and development of the Mustang, which was a car that was ahead of its time.

The book also covers the various models of the Mustang, from the original Shelby Mustangs to the fourth generation Mustangs.

Nonlinear Differential Equations in Abstract Spaces V. Lakshmikantham 1981 Many problems in partial differential equations which arise from physical models can be considered as ordinary differential equations in appropriate infinite dimensional spaces, for which elegant theories and powerful techniques have recently been developed. This book gives a detailed account of the current state of the theory of nonlinear differential equations in a Banach space, and discusses existence theory for differential equations with continuous and discontinuous right-hand sides. Of special importance is the first systematic presentation of the very important and complex theory of multivalued discontinuous differential equations.

High and Mighty Keith Bradsher 2004-01-19 SUVs have taken over America’s roads. Ad campaigns promote them as safer and “greener” than ordinary cars and easy to handle in bad weather. But very little about the SUV’s image is accurate. They poorly protect occupants and inflict horrific damage in crashes, they guzzle gasoline, and they are hard to control. Keith Bradsher has been at the forefront in reporting the calamitous safety and environmental record of SUVs, including the notorious Ford-Firestone rollover controversy. In High and Mighty, he traces the checkered history of SUVs, showing how they came to be classified not as passenger cars but as light trucks, which are subject to less strict regulations on safety, gas mileage, and air pollution. He makes a powerful case that these vehicles are even worse than we suspect—-for their occupants, for other motorists, for pedestrians and for the planet itself. In the tradition of Unsafe at Any Speed and Fast Food Nation, Bradsher’s book is a damning exposé of an industry that puts us all at risk, whether we recognize it or not.

Glossary of Automotive Terms Society of Automotive Engineers 1988 This comprehensive glossary brings together in one handy volume over 10,500 current automotive terms. From “A-pillar” to “Zones of Reach,” the Glossary provides you with over 500 pages of alphabetically listed definitions collected from the SAE Handbook. For further research each definition references the SAE standard or specification from which it was taken. The new Glossary of Automotive Terms is an essential reference for anyone in the industry.

The Name is Familiar-- Robert A. Howlan 1993 Which actor played Will Rogers on file? What was the name of Marilyn Monroe’s character in “Gentlemen Prefer Blondes”? The Name Is Familiar documents over 9,000 files whose titles refer to particular characters. Part One lists film titles alphabetically with the name of the title character and the release, studio/production company, director, and leading performers. Performers who have played title role characters are listed in Part Two with the title roles in which they have appeared. Part Three is an alphabetical directory of characters with the performers who played the role; a capsule description of the role is also included.

Tall Life Dr Sam Lochner Phd 2016-05-24 This is a book for tall people, those who relate to them, and anyone interested in height in general. Being tall coincides with considerable professional, athletic, and social benefits. Yet there are also some problems, and these raise some questions. For instance, if longer levers and more cells really are behind increased risk of injuries and cancer, then how is it that giraffes get by? And why is it that society reveres tall stature but then compromises our safety with cramped cars and other things? And, as tall women might be pondering, where have all the tall, dark, and handsome men gone? Lastly, what can be done about all this? These questions and more will all be answered by a tall protagonist over eight chapters: Evolution, Scaling, Spine, Manufactured, Ergonomics, Growth, Longevity, and Society.
