High and Mighty Keith Bradsher 2004-01-19 SUVs have come over America's roads. Ads campaign them as “all things,” but to many Americans they are a lousy automobile. They are gas hogs, they sicken the environment, they give the SUV's image is accurate. They poorly protect occupants and inflict horrific damage in crashes, they gusset gasoline, and they are hard to control. Keith Bradsher has been at the forefront in reporting the calamitous safety and environmental costs of SUVs. He has made us aware of the marketing tricks that conceal these costs. High and Mighty, he traces the checked history of SUVs, showing how they came to be classified not as passenger cars but as light trucks, which are subject to less strict regulations on safety, gas mileage, and air pollution. He makes a powerful case that these vehicles are even worse than we suspect--for their occupants, for other motorists, for the planet itself. In the tradition of Unsatisfy and Fast Food Nation, Bradsher's book is a damning exposé of an industry that puts us all at risk, whether we are SUV owners or not.
