Cuckoo's Nest Revisited Heidi Mayer 2005-04 A young Registered Nurse, not long out of her training years in a large, busy county hospital serving a major U.S. city, begins her day in the acute locked psychiatric ward of a smaller county hospital nearby. While she knows, in general, what to expect, the details that will emerge over the next eight hours are as yet not revealed. What follows, taken from the notes in her journal concerning that day, reflect the vast array of tragedies, great and small, the triumphs, the hopes, and the disappointments of a representative sample of the 20% of American citizens who will, during their lives, experience similar events that will cause them to spend time in such a setting. Events like suicide attempts, incest, murder, profound unhappiness, entrapment by mind-wrenching drugs, failed loves, and bizarre behavior, not confined to the patients alone, that set people apart from their fellows, along with hope and the earnest wish for a better life. This book, all of it true - though the names of the actors have been disguised - describes a burgeoning problem: what is, sometimes loosely and inaccurately, termed "mental illness" and modern attempts to deal with it. Many of them challenge our best efforts to define what is, and what is not, "normal." Their numbers are growing; the cost of their care takes a huge portion of health expenditures. Solutions are far from being at hand, yet those solutions are a measure of our humanity. Some of the people you will meet here are your friends and neighbors, your family and, just possibly, you yourself.

Fatwa Jacky Trevane 2013-09-12 Jacky was twenty-three when she arrived in Egypt for a holiday with her boyfriend, Dave. Little did she know that an innocent holiday would result in a horror beyond her imagination. Separated from Dave in a bustling street, Jacky fell and twisted her ankle, only to be swept up by a handsome, chivalrous Egyptian called Omar. It was love at first sight. Jacky spent those ten days living with the family - sharing a bed with Omar's sister - irresistibly attracted to Omar. Swept away by her infatuation she married him and converted to Islam before returning to England to her parents. Returning to Cairo against her parents' advice but full of hopes and plans, Jacky's dream turned into a nightmare. As a blue-eyed blonde she was never going to fit in with life in a poor suburb where the women walked at all times with their heads bowed. During the next eight years she suffered non-stop physical and emotional abuse. She had to escape with her two little girls but how? This tense story never quite ends. Even now, Jacky is living in the shadow of a death threat. A fatwa is issued legitimately under Islamic law to a Muslim woman who leaves her husband. Jacky to protect herself and her daughters minute by minute, day by day, never quite sure what may be around the corner...

Post-Hindu India Kancha Ilaiah 2009-11-17 Kancha Ilaiah, the author of the best selling book Why I am Not a Hindu, pens a thought-provoking critique of Brahmanism and the caste system in India, while anticipating the death of Hinduism as a direct consequence of, what he says is, its anti-scientific and anti-nationalistic stand. This work challenges Hinduism's interpretation of history, with a virulent attack on caste politics, and also takes a refreshing look at the necessity of encouraging indigenous scientific thought for the sake of national progress. It establishes Hinduism as a "backward" religion that suppresses the latent scientific and productive potential of the Dalit-Bahujan communities. The author says this oppressive system of spiritual fascism is detrimental to both the future of religion and the nation-state. He thus criticizes the idea of spiritual justice or varnadharma, used to justify the caste system, as rooted in spiritual inequality. On a micro-analytical level, it is based on a thorough study of the productive knowledge systems of the Dalit-Bahujan communities of Andhra Pradesh, and provides a detailed day-to-day analysis of the scientific technological processes and events at work in the life of a member of these communities. On a macro level, it shows how Hinduism fails to negotiate between faith and reason, unlike other major religions of the world. Kancha Ilaiah critiques the intellectual imagination of the dominant communities and inspires the marginalized. In the process of doing so he crafts a work of immense socio-political interest which appeals to academics, and also to all those who are concerned about contemporary India's polity and social fabric.

Statistics Frederick L. Coolidge 2020-01-10 The Fourth Edition of *Statistics: A Gentle Introduction* shows students that an introductory statistics class doesn't need to be difficult or dull. This text minimizes students' anxieties about math by explaining the concepts of statistics in plain language first, before addressing the math. Each formula within the text has a step-by-step example to demonstrate the calculation so students can follow along. Only those formulas that are important for final calculations are included in the text so students can focus on the concepts, not the numbers. A wealth of real-world examples and applications gives a context for statistics in the real world and how it helps us solve problems and make informed choices. New to the Fourth Edition are sections on working with big data, new coverage of alternative non-parametric tests, beta coefficients, and the "nocebo effect," discussions of p values in the context of research, an expanded discussion of confidence intervals, and more exercises and homework options under the new feature "Test Yourself." Included with this title: The password-protected Instructor Resource Site (formally known as SAGE Edge) offers access to all text-specific resources, including a test bank and editable, chapter-specific PowerPoint® slides.

Delving into more technical topics, this book equips readers with advanced data mining methods that are needed to successfully translate raw data into smart decisions across various fields of research including business, engineering, finance, and the social sciences. Following a comprehensive introduction that details how to define a problem, perform an analysis, and deploy the results, *Making Sense of Data II* addresses the following key techniques for advanced data analysis: Data Visualization reviews principles and methods for understanding and communicating data through the use of visualization including single variables, the relationship between two or more variables, groupings in data, and dynamic approaches to interacting with data through graphical user interfaces. Clustering outlines common approaches to clustering data sets and provides detailed explanations of methods for determining the distance between observations and procedures for clustering observations. Agglomerative hierarchical clustering, partitioned-based clustering, and fuzzy clustering are also discussed. Predictive Analytics presents a discussion on how to build and assess models, along with a series of predictive analytics that can be used in a variety of situations including principal component analysis, multiple linear regression, discriminate analysis, logistic regression, and Naïve Bayes. Applications demonstrates the current uses of data mining across a wide range of industries and features case studies that illustrate the related applications in real-world scenarios. Each method is discussed within the context of a data mining process including defining the problem and deploying the results, and readers are provided with guidance on when and how each method should be used. The related Web site for the series (www.makingsenseofdata.com) provides a hands-on data analysis and data mining experience. Readers wishing to gain more practical experience will benefit from the tutorial section of the book in conjunction with the Traceis™ software, which is freely available online. With its comprehensive collection of advanced data mining methods coupled with tutorials for applications in a range of fields, *Making Sense of Data II* is an indispensable book for courses on data analysis and data mining at the upper-undergraduate and graduate levels. It also serves as a valuable reference for researchers and professionals who are interested in learning how to accomplish effective decision making from data and understanding if data analysis and data mining methods could help their organization.

Microprocessor 3 Philippe Darche 2020-12-15 Calculation is the main function of a computer. The central unit is responsible for executing the programs. The microprocessor is its integrated form. This component, since the announcement of its marketing in 1971, has not stopped breaking records in terms of computing power, price reduction and integration of functions (calculation of basic functions, storage with integrated controllers). It is present today in most electronic devices. Knowing its internal mechanisms and programming is essential for the electronics engineer and computer scientist to understand and master the operation of a computer and advanced concepts of programming. This first volume focuses more particularly on the first generations of microprocessors, that is to say those that handle integers in 4 and 8-bit formats. The first chapter presents the calculation function and reminds the memory function. The following is devoted to notions of calculation model and architecture. The concept of bus is then presented. Chapters 4 and 5 can then address the internal organization and operation of the microprocessor first in hardware and then software. The mechanism of the function call, conventional and interrupted, is more particularly detailed in a separate chapter. The book ends with a presentation of architectures of the first microcomputers for a historical perspective. The knowledge is presented in the most exhaustive way possible with examples drawn from current and old technologies that illustrate and make accessible the theoretical concepts. Each chapter ends if necessary with corrected exercises and a bibliography. The list of acronyms used and an index are at the end of the book.
