Acid: Definition and Examples in Chemistry - ThoughtCo

WebJan 13, 2020 · An acid is a chemical species that donates protons or hydrogen ions and/or accepts electrons. Most acids contain a hydrogen atom bonded that can release (dissociate) to yield a cation and an anion in water. The higher the concentration of hydrogen ions produced by an acid, the higher its acidity and the lower the pH of the solution.

LSD (Acid): Effects, Hazards & Extent of Use - Drugs.com

WebLSD (lysergic acid diethylamide), first synthesized in 1938, is an extremely potent hallucinogen. Hallucinations are when you see, hear, feel,

taste, or smell something that seems real but is not. It is commonly called Acid. LSD is synthetically made from lysergic acid, which is found in ergot, a fungus that grows on rye and other grains.

Acid Definition & Meaning | Dictionary.com

Webnoun. Chemistry. a compound usually having a sour taste and capable of neutralizing alkalis and reddening blue litmus paper, containing hydrogen that can be replaced by a metal or an electropositive group to form a salt, or containing an atom that can accept a pair of electrons from a base. Acids are proton donors that yield hydronium ions in water solution, or ...
