The Africana Bible Hugh R. Page 2010 A landmark volume, The Africana Bible gathers multicultural and interdisciplinary perspectives on every book in the Hebrew Bible. It opens a critical window onto the world of interpretation on the African continent and in the multiple diasporas of African peoples, including the African-American experience, with attention to Africana histories, literatures, cultures, and backgrounds for understanding biblical literature. The Africana Bible features a critical commentary on every book of the Hebrew Bible, the Apocrypha, and Pesepigrapha that are authoritative for many in African and African-diasporan communities worldwide. It highlights issues of concern to the global Black community (such as globalization and the colonial legacy) and the distinctive norms of interpretation in African and African Diaspora settings.

Teranesia Greg Egan 1999-07-12 Welcome to Teranesia, the island of butterflies, where evolution has stopped making sense. Phrah Suresh lives in paradise, a nine-year-old boy with an island all his own: to name, to explore, and to populate with imaginary creatures stranger than any exotic tropical wildlife. Teranesia is his kingdom, shared only with his biologist parents and baby sister Madhusree. The evolutionary puzzle of the island’s butterflies that brought his family to the remote South Molucases barely touches Phrah; his own life revolves around the beaches, the jungle, and the schooling and friendships made possible by the net. When civil war breaks out across Indonesia, this paradise comes to a violent end.

The mystery of the butterflies remains unsolved, but nearly twenty years later reports begin to appear of strange new species of plants and animals being found throughout the region — species separated from their known cousins by recent, dramatic mutations that seem too useful to have arisen by chance from pollution, disease, or any other random catastrophes. Madhusree is now a biology student, proud of her parents’ unacknowledged work, and with no memories of the trauma of the war to discourage her, she decides to join a multinational expedition being mounted to investigate the new phenomena. Unable to cast off his fears for her safety, Phrah reluctantly follows her. But travel between the scattered islands is difficult, and Madhusree has covered her tracks. In the hope of finding her, Phrah joins up with an independent scientist, Martha Grant, who has come to search for both clues to the mystery and whatever commercial benefits it might bring to her sponsor. As Phrah and Martha begin to untangle the secret of Teranesia, Phrah is forced to confront his past, and to face the painful realities that have shaped his life.

The Locker Reader John W. Volts 1977-03-01 John Volton seeks to allow readers of Locke to have accessible in one volume sections from a wide range of Locke’s books, structured so that some of the interconnections of his thought can be seen and traced. Although Locke did not write from a system of philosophy, he did have in mind an overall division of human knowledge. The readings begin with Locke’s essay on Hermeneutics and the portions of his Essay Concerning Human Understanding on how to read a text. The rest of the selections are organized around Locke’s division of human knowledge into natural science, ethics, and the theory of signs. Volton’s introduction and commentary explicate Locke’s doctrines and provide the reader with the general background knowledge of other seventeenth-century writers and their works necessary to an understanding of Locke and his time.

Differential Forms and Applications Manfredo P. De Carmo 2012-12-06 An application of differential forms for the study of some local and global aspects of the differential geometry of surfaces. Differential forms are introduced in a simple way that will make them attractive to “users” of mathematics. A brief and elementary introduction to differentiable manifolds is given so that the main theorem, namely Stokes’ theorem, can be presented in its natural setting. The applications consist in developing the method of moving frames expounded by E. Cartan to study the local differential geometry of immersed surfaces in R3 as well as the intrinsic geometry of surfaces. This is then collated in the last chapter to present Chern’s proof of the Gauss-Bonnet theorem for compact surfaces.
