What’s My Name, Fool? Dave Zirin 2011-02 In What’s My Name, Fool? sports writer Dave Zirin shows how sports express the worst - and at times the most creative, exciting, and political - features of our society. Zirin’s sharp and insightful commentary on the personalities, politics, and history of American sports is unlike any sports writing being done today. Zirin explores how NBA brawls highlight tensions beyond the arena, how the bold stances taken by sports unions can chart a path for the entire labor movement, and the unexplored political stirrings of a new generation of athletes who are no longer content to just “play one game at a time.” What’s My Name, Fool? draws on original interviews with former heavyweight champ George Foreman, Olympic athlete John Carlos, NBA player and anti-death penalty activist Etan Thomas, anti-war moms college hopster Toni Smith, Olympic Project for Human Rights leader Lee Evans and many others. It also unveils a history of athletes ranging from Jackie Robinson to Muhammad Ali to Billie Jean King, who charted a new course through their athletic ability and their outspoken views. Winner Take All Dambisa Moyo 2012-06-05 Commodities permeate virtually every aspect of modern daily living, but for all their importance -- their breadth, their depth, their intricacies, and their central role in daily life -- few people who are not economists or traders know how commodity markets work. Almost every day, newspaper headlines and media commentators scream warnings of impending doom -- shortages of arable land, clashes over water, and political conflict as global demand for fossil fuels outstrips supply. The picture is bleak, but our grasp of the details and the macro shifts in commodities markets remain blurry. Winner Take All is about the commodity dynamics that the world will face over the next several decades. In particular, it is about the implications of China’s rush for resources across all regions of the world. The scale of China’s resource campaign for hard commodities (metals and minerals) and soft commodities (timber and food) is among the largest in history. To be sure, China is not the first country to launch a global crusade to secure resources. From Britain’s transcontinental operations dating back to the end of the 16th century, to the rise of modern European and American transnational corporations between the mid 1860’s and 1870’s, the industrial revolution that powered these economies created a voracious demand for raw materials and created the need to go far beyond their native countries. So too is China’s resource rush today. Although still in its early stages, already the breadth of China’s operation is awesome, and seemingly unstoppable. China’s global charge for commodities is a story of China’s quest to secure its claims on resource assets, and to guarantee the flow of inputs needed to continue to drive economic development. Moyo, an expert in global commodities markets, explains the implications of China’s resource grab in a world of diminishing resources. Dead Aid Dambisa Moyo 2009-03-17 Describes the state of postwar development policy in Africa that has channeled billions of dollars in aid but failed to either reduce poverty or increase growth, offering a hopeful vision of how to address the problem. The Life and Times of Raul Prebisch, 1901-1986 Edgar Dosman 2008 A wunderkind, Prebisch occupied key positions at the Argentine Ministry of Finance in his twenties and was the General Manager of the Argentine Central Bank before forty. Exiled by Juan Peron after World War II, he became arguably the most influential Latin American official at the UN, heading such international organizations as the Economic Commission for Latin America and the United
Nations Conference on Trade and Development. The Future of Foreign Aid, Sumner 2012-12-18

Sumner and Mallett review the literature on aid in light of shifts in the aid system and the increasing concentration of the world’s poor in middle-income countries. As a consequence, they propose a series of practical, policy-relevant options for future development cooperation, with the aim of provoking discussion and informing policy.

How the West Was Lost Dambisa Moyo 2011-02-15 In How the West Was Lost, the New York Times bestselling author Dambisa Moyo offers a bold account of the decline of the West’s economic supremacy. She examines how the West’s flawed financial decisions have resulted in an economic and geopolitical seesaw that is now poised to tip in favor of the emerging world, especially China. Amid the hype of China’s rise, however, the most important story of our generation is being pushed aside: America is not just in economic decline, but on course to become the biggest welfare state in the history of the West. The real danger is at home, Moyo claims. While some countries – such as Germany and Sweden – have deliberately engineered and financed welfare states, the United States risks turning itself into a bloated welfare state not because of ideology or a larger vision of economic justice, but out of economic desperation and short-sighted policymaking. How the West Was Lost reveals not only the economic myopia of the West but also the radical solutions that it needs to adopt in order to assert itself as a global economic power once again.

The Second Media Age Mark Poster 2018-03-08 This book examines the implications of new communication technologies in the light of the most recent work in social and cultural theory and argues that new developments in electronic media, such as the Internet and Virtual Reality, justify the designation of a “second media age”.

World Social Report 2020 Department of Economic and Social Affairs 2020-02-14 This report examines the links between inequality and other major global trends (or megatrends), with a focus on technological change, climate change, urbanization and international migration. The analysis pays particular attention to poverty and labour market trends, as they mediate the distributional impacts of the major trends selected. It also provides policy recommendations to manage these megatrends in an equitable manner and considers the policy implications, so as to reduce inequalities and support their implementation.

Rethinking Sexuality Dr. Juli Slattery 2018-07-24 This groundbreaking resource challenges and equips Christians to think and act biblically and compassionately in matters of sexuality. Sexual abuse, sex addiction, gender confusion, brokenness, and shame plague today’s world, and people are seeking clarity and hope. By contesting long-held cultural paradigms, this book equips you to see how sexuality is rooted in the broader context of God’s heart and His work for us on earth. It provides a framework from which to understand the big picture of sexual challenges and wholeness, and helps you recognize that every sexual question is ultimately a spiritual one. It shifts the paradigm from combating sexual problems to confidently proclaiming and modeling the road to sacred sexuality. Instead of arguing with the world about what’s right and wrong about sexual choices, this practical resource equips you to share the love and grace of Jesus as you encounter the pain of sexual brokenness—your own or someone else’s.

Global Modernization Alberto Martinelli 2005-07-12 This text provides a new approach to examining questions of modernization and modernity. It overhauls existing theories and concepts and applies them to the new social and economic conditions that define our age.

Images of Organization Gareth Morgan 2006-04-15 Since its first publication over twenty years ago, Images of Organization has become a classic in the canon of management literature. The book is based on a very simple premise—that all theories of organization and management are based on implicit images or metaphors that stretch our imagination in a way that can create powerful insights, but at the risk of distortion. Gareth Morgan provides a rich and comprehensive resource for exploring the complexity of modern organizations internationally, translating leading-edge theory into leading-edge practice.

Making Climate Policy Work Danny Cullenward 2020-10-07 For decades, the world's governments have struggled to move from talk to action on climate. Many now hope that growing public concern will lead to greater policy ambition, but the most widely promoted strategy to address the climate crisis -- the use of market-based programs -- hasn't been working and isn't ready to scale. Danny Cullenward and David Victor show how the politics of creating and maintaining market-based policies render them ineffective nearly everywhere they have been applied. Reforms can help around the margins, but markets' problems are structural and won't disappear with increasing demand for climate solutions. Facing that reality requires rethinking more heavily on smart regulation and industrial policy -- government-led strategies -- to catalyze the transformation that markets promise, but rarely deliver.

Rethinking Urban Risk and Resettlement in the Global South Cassidy Johnson 2021-06-10 Environmental changes have significant impacts on people's lives and livelihoods, particularly the urban poor and those living in informal settlements. In an effort to reduce urban residents' exposure to climate change and hazards such as natural disasters, resettlement programs are becoming widespread across the Global South. While resettlement may reduce a region's future climate-related disaster risk, it often increases poverty and vulnerability, and can be used as a reason to evict people from areas undergoing redevelopment. A collaboration between the Bartlett Development Planning Unit at UCL, the Indian Institute for Human Settlements and the Latin American Social Science Faculty, Rethinking Urban Risk and Resettlement in the Global South collates the findings from 'Reducing Relocation Risks', a research project that studied urban areas across India, Uganda, Peru, Colombia and Mexico. The findings are augmented with chapters by researchers with many years of insight into resettlement, property rights and evictions, who offer cases from Monserrat, Cambodia, Philippines and elsewhere. The contributors collectively argue that the processes for making and implementing decisions play a large part in determining whether outcomes are socially just, and examine various value systems and strategies adopted by individuals versus authorities. Considering perceptions of risk, the volume offers a unique way to think about economic assessments in the context of resettlement and draws parallels between different country contexts to compare fully urbanised areas with those experiencing urban growth. It also provides an opportunity to re-think how disaster risk management can better address the accumulation of urban risks through urban planning.

Rethinking Public Administration United Nations. Division of Public Administration and Development Management 1998 Machine Habitus Massimo Airoldi 2021-12-13 We commonly think of society as made of and by humans, but with the proliferation of machine learning and AI technologies, this is clearly no longer the case. Billions of automated systems tacitly contribute to the social construction of reality by drawing algorithmic distinctions between the visible and the invisible, the relevant and the irrelevant, the likely and the unlikely – on and beyond platforms. Drawing on the work of Pierre Bourdieu, this book develops an original sociology of algorithms as social agents, actively participating in social life. Through a wide range of examples, Massimo Airoldi shows how society shapes algorithmic code, and how this culture in the code guides the practical behaviour of the code in the culture, shaping society in turn. The "machine habitus" is the generative mechanism at work throughout myriad feedback loops linking humans with artificial social agents, in the context of digital infrastructures and pre-digital social structures. Machine Habitus will be of great interest to students and scholars in sociology, media and cultural studies, science and technology studies and information technology, and to anyone interested in the growing role of algorithms and AI in our social and cultural life.

The Future of Aid Jonathan Glennie 2020-11-30 International cooperation has never been more needed, but the current system of “aid” is outdated and...
ineffective. The Future of Aid calls for a wholesale restructuring of the aid project, a totally new approach fit for the challenges of the 21st century: Global Public Investment. Across the world, billions of people are struggling to get by in unequal and unsustainable societies, and international public finance, which should be part of the answer, is woefully deficient. Engagingly written by a well-known expert in the field, The Future of Aid calls for a series of paradigm shifts. From a narrow focus on poverty to a broader attack on inequality and sustainability. From seeing international public money as a temporary last resort, to valuing it as a permanent force for good. From North-South transfers to a collective effort, with all paying in and all benefiting. From outdated post-colonial institutions to representative decision-making. From the othering and patronising language of “foreign aid”, to the empowering concept of Global Public Investment. Ten years ago, in The Trouble with Aid, Jonathan Glennie highlighted the dangers of aid dependency and the importance of looking beyond aid. Now he calls for a revolution in the way that we think about the role of public money to back up our ambitious global objectives. In the wake of the COVID-19 crisis, it is time for a new era of internationalism.

Rethinking Education Philip S. Gang 1989-12-01 Plan B Lester Russell Brown 2003 Provides alternative solutions to such global problems as population control, emerging water shortages, eroding soil, and global warming.

Structures of Protection? Tom Scott-Smith 2020-05-01 Questioning what shelter is and how we can define it, this volume brings together essays on different forms of refugee shelter, with a view to widening public understanding about the lives of forced migrants and developing theoretical understanding of this oft-neglected facet of the refugee experience. Drawing on a range of disciplines, including sociology, anthropology, law, architecture, and history, each of the chapters describes a particular shelter and uses this to open up theoretical reflections on the relationship between architecture, place, politics, design and displacement.

The Return of the Policy That Shall Not Be Named: Principles of Industrial Policy Reda Cherif 2019-03-26 Industrial policy is tainted with bad reputation among policymakers and academics and is often viewed as the road to perdition for developing economies. Yet the success of the Asian Miracles with industrial policy stands as an uncomfortable story that many ignore or claim it cannot be replicated. Using a theory and empirical evidence, we argue that one can learn more from miracles than failures. We suggest three key principles behind their success: (i) the support of domestic producers in sophisticated industries, beyond the initial comparative advantage; (ii) export orientation; and (iii) the pursuit of fierce competition with strict accountability.

Rethinking Social Action through Music Geoffrey Baker 2021-04-12 How can we better understand the past, present and future of Social Action through Music (SATM)? This ground-breaking book examines the development of the Red de Escuelas de Música de Medellín (the Network of Music Schools of Medellín), a network of 27 schools founded in Colombia’s second city in 1996 as a response to its reputation as the most dangerous city on Earth. Inspired by El Sistema, the foundational Venezuelan music education program, the Red is nonetheless markedly different: its history is one of multiple reinventions and a continual search to improve its educational offering and better realise its social goals. Its internal reflections and attempts at transformation shed valuable light on the past, present, and future of SATM. Based on a year of intensive fieldwork in Colombia and written by Geoffrey Baker, the author of El Sistema: Orchestrating Venezuela’s Youth (2014), this important volume offers fresh insights on SATM and its evolution both in scholarship and in practice. It will be of interest to a very varied readership: employees and leaders of SATM programs; music educators; funders and policy-makers; and students and scholars of SATM, music education, ethnomusicology, and other related fields.

Upshift Ben Ramalingam 2023-02-16 From a leading crisis management expert, a breakthrough book about performance under pressure that will change the way you think about stress.

A Paradise Built in Hell Rebecca Solnit 2010-08-31 The author of Men Explain Things to Me explores the moments of altruism and generosity that arise in the aftermath of disaster Why is it that in the aftermath of a disaster? whether manmade or natural? people suddenly become altruistic, resourceful, and brave? What makes the newfound communities and purpose many find in the ruins and crises after disaster so joyous? And what does this joy reveal about ordinarily unmet social desires and possibilities? In A Paradise Built in Hell, award-winning author Rebecca Solnit explores these phenomena, looking at major calamities from the 1906 earthquake in San Francisco through the 1917 explosion that tore up Halifax, Nova Scotia, the 1985 Mexico City earthquake, 9/11, and Hurricane Katrina in New Orleans. She examines how disaster throws people into a temporary utopia of changed states of mind and social possibilities, as well as looking at the cost of the widespread myths and rarer real cases of social deterioration during crisis. This is a timely and important book from an acclaimed author whose work consistently locates unseen patterns and meanings in broad cultural histories.

Liberal democracy, history’s greatest engine of growth, now struggles to overcome unprecedented economic headwinds—from aging populations to scarce resources to unsustainable debt burdens. Hobbled by short-term thinking and ideological dogma, democracies risk falling prey to nationalism and protectionism that will deliver declining living standards. In Edge of Chaos, Dambisa Moyo shows economic growth is essential to global stability, and why liberal democracies are failing to produce it today. Rather than turning away from democracy, she argues, we must fundamentally reform it. Edge of Chaos presents a radical blueprint for change in order to galvanize growth and ensure the survival of democracy in the twenty-first century.

Knowledge and the Wealth of Nations: A Story of Economic Discovery David Warsh 2007-05-17 

"What The Double Helix did for biology, David Warsh’s Knowledge and the Wealth of Nations does for economics." —Boston Globe A stimulating and inviting tour of modern economics centered on the story of one of its most important breakthroughs. In 1980, the twenty-four-year-old graduate student Paul Romer tackled one of the oldest puzzles in economics. Eight years later he solved it. This book tells the story of what has come to be called the new growth theory: the paradox identified by Adam Smith more than two hundred years earlier, its disappearance and occasional resurfacing in the nineteenth century, the development of new technical tools in the twentieth century, and finally the student who could see further than his teachers. Fascinating in its own right, new growth theory helps to explain dominant first-mover firms like IBM or Microsoft, underscores the value of intellectual property, and provides essential advice to those concerned with the expansion of the economy. Like James Gleick’s Chaos or Brian Greene’s The Elegant Universe, this revealing book takes us to the frontlines of scientific research; not since Robert Heilbroner’s classic work The Worldly Philosophers have we had as attractive a glimpse of the essential science of economics. The Paradoxes of Aid Work Silke Roth 2015-03-24 This book explores what attracts people to aidwork and to what extent the promises of aidwork are fulfilled. ‘Aidland’ is a highly complex and heterogeneous context which includes many different occupations, forms of employment and organizations. Analyzing the processes that lead to the involvement in development cooperation, emergency relief and human rights work and tracing the pathways into and through Aidland, the book addresses working and living conditions in Aidland, gender relations and inequality among aid personnel and what impact aidwork has on the life-courses of aidworkers. In order to capture the trajectories that lead to Aidland a biographical perspective is employed which reveals that boundary crossing between development cooperation, emergency relief and human rights is not unusual and that considering these fields as separate spheres might overlook important connections. Rich reflexive data is used to theorize about the often contradictory experiences of people working in aid whose careers are shaped by geo-politics, changing priorities of donors and a changing composition of the aid sector. Exploring the life worlds of people working in aid, this book contributes to the emerging sociology and anthropology of aidwork and will be of interest to professionals and researchers in humanitarian and development studies, sociology, anthropology, political science and international relations, international social work and social psychology.

From Poverty to Power Duncan Green 2008 Offers a look at the causes and effects of poverty and inequality, as well as the possible solutions. This title features research, human stories, statistics, and compelling arguments. It discusses about the world we live in and how we can make it a better place. The Image of the City Kevin Lynch 1964-06-15 The classic work on the evaluation of city form. What does the city’s form actually mean to the people who live there? What can the city planner do to make the city’s image more vivid and memorable to the city
dwellers? To answer these questions, Mr. Lynch, supported by studies of Los Angeles, Boston, and Jersey City, formulates a new criterion—imageability—and shows its potential value as a guide for the building and rebuilding of cities. The wide scope of this study leads to an original and vital method for the evaluation of city form. The architect, the planner, and certainly the city dweller will all want to read this book.

**Disaster Research and the Second Environmental Crisis**

James Kendra 2019-04-04 The 50th anniversary of the Disaster Research Center of the University of Delaware provoked a discussion of the field’s background, its accomplishments, and its future directions. Participants representing many disciplines brought new methods to bear on perennial problems relevant to effective disaster management and policy formation. However, new concerns were raised, stemming from the fact that we live today in a globally unfolding environmental crisis every bit as pressing and worrisome as that of the 1960s when the Disaster Research Center was founded. This volume brings together ideas of participants from that workshop as well as other contributors. Topics include: the history and evolution of disaster research, innovations in disaster management, disaster policy, and ethical considerations of disaster research. Readers interested in science and technology, public policy, community action, and the evolution of the social sciences will find much of interest in this collection.

**Statistical Rethinking**

Richard McElreath 2018-01-03 Statistical Rethinking: A Bayesian Course with Examples in R and Stan builds readers’ knowledge of and confidence in statistical modeling. Reflecting the need for even minor programming in today’s model-based statistics, the book pushes readers to perform step-by-step calculations that are usually automated. This unique computational approach ensures that readers understand enough of the details to make reasonable choices and interpretations in their own modeling work. The text presents generalized linear multilevel models from a Bayesian perspective, relying on a simple logical interpretation of Bayesian probability and maximum entropy. It covers from the basics of regression to multilevel models. The author also discusses measurement error, missing data, and Gaussian process models for spatial and network autocorrelation. By using complete R code examples throughout, this book provides a practical foundation for performing statistical inference. Designed for both PhD students and seasoned professionals in the natural and social sciences, it prepares them for more advanced or specialized statistical modeling.

Web Resource The book is accompanied by an R package (rethinking) that is available on the author’s website and GitHub. The two core functions (map and map2stan) of this package allow a variety of statistical models to be constructed from standard model formulas.

**Aid on the Edge of Chaos**

Ben Ramalingam 2013-10-24 Aid has become a tangle of donors and recipients, so unwieldy that it is in danger of collapse. This ground-breaking book presents fresh thinking that transcends the ‘more’ versus ‘less’ arguments. Drawing on complexity theory it shows how aid could be transformed into a truly dynamic form of global cooperation fit for the twenty-first century.

**How Learning Works**

Susan A. Ambrose 2010-04-16 Praise for How Learning Works “How Learning Works is the perfect title for this excellent book. Drawing upon new research in psychology, education, and cognitive science, the authors have demystified a complex topic into clear explanations of seven powerful learning principles. Full of great ideas and practical suggestions, all based on solid research evidence, this book is essential reading for instructors at all levels who wish to improve their students’ learning.” —Barbara Gross Davis, assistant vice chancellor for educational development, University of California, Berkeley, and author, Tools for Teaching “This book is a must-read for every instructor, new or experienced. Although I have been teaching for almost thirty years, as I read this book I found myself resonating with many of its ideas, and I discovered new ways of thinking about teaching.” —Eugenia T. Paulus, professor of chemistry, North Hennepin Community College, and 2008 U.S. Community Colleges Professor of the Year from The Carnegie Foundation for the Advancement of Teaching and the Council for Advancement and Support of Education “Thank you Carnegie Mellon for making accessible what has previously been inaccessible to those of us who are not learning scientists. Your focus on the essence of learning combined with concrete examples of the daily challenges of teaching and clear tactical strategies for faculty to consider is a welcome work. I will recommend this book to all my colleagues.” —Catherine M. Casserly, senior partner, The Carnegie Foundation for the Advancement of Teaching “As you read about each of the seven basic learning principles in this book, you will find advice that is grounded in learning theory, based on research evidence, relevant to college teaching, and easy to understand. The authors have extensive knowledge and experience in applying the science of learning to college teaching, and they graciously share it with you in this organized and readable book.” —From the Foreword by Richard E. Mayer, professor of psychology, University of California, Santa Barbara; coauthor, e-Learning and the Science of Instruction; and author, Multimedia Learning

Growing progress has led to a resurgence of populism
throughout the region, exemplified by the economic
policies of Venezuela's Hugo Chávez. But such
measures, Edwards warns, are a recipe for disaster;
instead, he argues, the way forward for Latin
America lies in further market reforms, more honestly
pursued and fairly implemented. As an example of the
promise of that approach, Edwards points to Latin
America's giant, Brazil, which under the successful
administration of President Luiz Inácio Lula da Silva
(Lula) has finally begun to show signs of reaching its
true economic potential. As the global financial crisis
has reminded us, the risks posed by failing economies
extend far beyond their national borders. Putting
Latin America back on a path toward sustained
growth is crucial not just for the region but for the
world, and Left Behind offers a clear, concise
blueprint for the way forward.

Change Forces Michael Fullan 2012-11-12
Knowledge of the processes of educational change is
said to be the missing ingredient in attempts to bring
about educational innovation and reform. Whether
these efforts involve grass roots innovation or
large-scale societal reform, failure to understand
and act on existing knowledge of the change process
has accounted for the widespread lack of success in
making educational improvements. This volume
analyzes what is known about successful or
productive change processes, and identifies
corresponding action strategies at the individual,
school, local and state levels. Included in this book
is a major treatment of the topic of the 'ethics of
planned change', a neglected topic in recent literature,
especially since strategies for intervening in the
change process are receiving more attention. This book
is intended to be used by teachers in training and in
service, teacher trainers, educational researchers,
education historians and administrators.

Transforming Performance Measurement Dean Spitzer
2007-02-09 It’s no secret that you can’t improve your
organization’s performance without measuring it. In fact, every function, unit, process, and the
organization as a whole, is built and run according to the parameters and expectations of its
measurement system. So you’d better make sure you’re doing it right. All too often, performance measurement creates dysfunction, whether among individuals,
teams, or across entire divisions and companies. Most traditional measurement systems actually encourage unhealthy competition for personal gain, creating
internal conflict and breeding distrust of performance measurement. Transforming Performance Measurement presents a breakthrough approach that will not only
significantly reduce those dysfunctions, but also
promote alignment with business strategy, maximize
cross-enterprise integration, and help everyone to
work collaboratively to drive value throughout
your organization. Performance improvement thought
leader Dean Spitzer explains why performance measurement should be less about calculations and
analysis and more about the crucial social factors
that determine how well the measurements get used.

should we be measuring and not measuring? Are the

Performance measurement is a dynamic process that
calls for an awareness of the balance necessary
between seemingly disparate ideas: the technical and the
social aspects of performance measurement. For
example, you need technology to manage the flood of
data, but you must make sure that it supports the

people who will be making decisions and taking action crucial to your organization’s success. This book shows you how to design that technical-social balance into your measurement system. While it is urgent to start taking action now, transforming your organization’s performance measurement system will take time. Transforming Performance Measurement gives you assessment tools to gauge where you are now and a roadmap for moving, with little or no disruption, to a more “transformational” and mature measurement system. The book also provides 34 TMAPs, Transformational Measurement Action Plans, which suggest both well-accepted and “emergent” measures (in areas such as marketing, human resources, customer service, knowledge management, productivity, information technology, research and development, costing, and more) that you can use right away. In the end, you get what you measure. If you measure the wrong things, you will take your company farther and farther away from its mission and strategic goals. Transforming Performance Measurement tells you not only what to measure, but how to do it -- and in what context -- to make a truly transformational difference in your enterprise.

Global Transformations David Held 1999 In this book, the authors set forth a new model of globalization that lays claims to supersede existing models, and then use this model to assess the way the processes of globalization have operated in different historic periods in respect to political organization, military globalization, trade, finance, corporate productivity, migration, culture, and the environment. Each of these topics is covered in a chapter which contrasts the contemporary nature of globalization with that of earlier epochs. In mapping the shape and political consequences of globalization, the authors concentrate on six states in advanced capitalist societies (SIACS): the United States, the United Kingdom, Sweden, France, Germany, and Japan. For comparative purposes, other states—particularly those with developing economics—are referred to and discussed where relevant. The book concludes by systematically describing and assessing contemporary globalization, and appraising the implications of globalization for the sovereignty and autonomy of SIACS. It also confronts directly the political fatalism that surrounds much discussion of globalization with a normative agenda that elaborates the possibilities for democratizing and civilizing the unfolding global transformation.
