WebJan 27, 2023 · An algorithm is a step-wise representation of a solution to a given problem. In Algorithm the problem is broken down into smaller pieces or steps hence, it is easier for the programmer to convert it into an actual program. Disadvantages of Algorithms: Writing an algorithm takes a long time so it is time-consuming.

What Is An Algorithm? Characteristics, Types and How to write it

WebNov 18, 2022 · An algorithm is a step-by-step procedure that defines a set of instructions that must be carried out in a specific order to produce the desired result. Algorithms are generally developed independently of underlying languages, which means that an algorithm can be implemented in more than one programming language.

What is Algorithm - Definition, Types and Application

WebDec 10, 2022 · In basic terms, an algorithm is a set of well-defined steps or rules that you need to follow to obtain a pre-determined result. For instance, when we talk about algorithms in computer programming, we already have our input and we know the expected output. Now, an algorithm would be all the defined steps to follow on the input to get the desired ...
