The university of Wisconsin's mission, known as the Wisconsin idea, emphasizes a responsibility to serve the needs of the state and its people. This philosophy of commitment, resourcefulness, and service has been nurtured through a rich tradition of social and intellectual engagement. As university and state grow more diverse, the university's commitment to excellence and the quality of education must not detract from a democratic and expansive conception of public service. Using the Wisconsin idea as a lens, Education for Democracy argues that public higher education institutions remain a bastion of collaborative problem solving. Examinations of partnerships between the state university and people of the state highlight the potential for broad public engagement in addressing the many issues of poverty alleviation. The contributors restore the value of state universities and humanities education as a public good, contending that they deserve renewed and robust support.

Youth and the Bright Medusa

Willa Cather 2001-04-20 Reproduction of the original: Youth and the Bright Medusa by Willa Cather

Strengthening Forensic Science in the United States

National Research Council 2009-07-29 Scores of talented and dedicated people serve the forensic community and have contributed to the evolution of forensic science. They are the core of the organization of forensic science.

Access to Information

Lawrence Lessig 2009-07-29 Access to Information is a collection of lectures and talks delivered by Lawrence Lessig on access to information.

Regents Exams and Answers: Earth Science--Physical Setting Revised Edition

Strengthening Forensic Science in the United States

National Research Council 2009-07-29 Scores of talented and dedicated people serve the forensic community and have contributed to the evolution of forensic science. They are the core of the organization of forensic science.

Science, Philosophy and Sustainability

Angela Guimaraes Pereira 2015-02-27 For science to remain a legitimate and trustworthy source of knowledge, society will have to engage in the collective processes of knowledge co-production, which not only includes science, but also other types of knowledge. This process of change has to include a new commitment to knowledge creation and transmission and its role in a plural society. This book proposes to consider new ways in which science can be used to sustain our planet and enrich our lives. It helps to release and restructure social responsibility within contemporary science and technology, instead of expecting science to alter the world by itself.

The Baby of the Black Hotel

Mary Renault 2009-07-29 "The Baby of the Black Hotel" is the most important, and certainly the most devastating, statement of the right to be human, because the central principle of its constitution is that the inhumanity of society can make the most trivial aspect of the biological self a matter of life and death. The Black Hotel is best remembered as the culmination of Renault's career because it is the book in which she is at her most humane, humanistic, and also most successful in making the case for a utilitarian approach to life. This book is about the power of words and the power of thought, and how they can be used to make a difference. It is about the power of hope and the power of change, and how they can be used to make a difference. It is about the power of love and the power of respect, and how they can be used to make a difference. It is about the power of action and the power of courage, and how they can be used to make a difference. It is about the power of community and the power of solidarity, and how they can be used to make a difference. It is about the power of compassion and the power of empathy, and how they can be used to make a difference. It is about the power of understanding and the power of wisdom, and how they can be used to make a difference.

The Ethics of Species and the Environment

Ronald L. Sandler 2012-09-20 Are we causing species to go extinct at extraordinary rates, altering entire species in unprecedented ways and creating entirely new species? More than ever before, we require an ethic of species to guide our interactions with them. In this book, Ronald L. Sandler examines the value of species and the ethical significance of species boundaries and discusses what these mean for species preservation in the face of global climate change, species engineering and human enhancement. He argues that species possess several varieties of value, but they are not sacred. It is our ethical responsibility to preserve the species that we need to preserve, rather than the species that we are guaranteed to preserve. This book also provides a framework for understanding the ethics of species and the environment, and how these ethics might be used to inform species preservation policies.

Successes and Failures in Science Policy

Andrew Cheon 2018-02-06 In less than a decade, activism against the fossil fuel industry has exploded across the globe. While environmentalists used to focus on legislative goals, such as carbon emissions trading or renewable energy policies, today the most prominent activists directly attack the fossil fuel industry. This timely book offers a comprehensive evaluation of different types of activism, the success and impact of campaigns, and the ways in which corporations respond. This book presents a wide range of case studies including the global climate change movement, oil and coal industries, and the fossil fuel industry. The book also explores the political and social factors that contribute to the success or failure of activism against the fossil fuel industry.
