POVERTY Bent Greve 2019-10-11 Poverty has dire consequences on the ability to fulfil one’s aspirations for life. Poverty has strong implications for social cohesion and societies’ abilities to function in harmonious ways. This book presents the readers with the core concepts, latest development and knowledge about policies that work to eliminate absolute poverty. This volume shows what the consequences are for the quality of life of those living in poverty. It describes life for people in poverty in general, but also deals more specifically with children, in-work poverty and the elderly, thus providing a life, generational and global perspective on poverty, including the impact on people’s happiness levels. The book also discusses policies aimed at poverty reduction, such as changes to the labour market – including the risk of working poor – and shows that there is a variety of possible instruments available to reduce poverty. These range from direct provision of social security to ensuring education and a better functioning labour market. Written in an engaging and accessible style, the book provides a succinct insight into the concept of poverty, how to measure it, the situation of poverty around the globe as well as different types of possible interventions to cope with poverty. Supporting theory with examples and case studies from a variety of contexts, suggestions for further reading, and a detailed glossary, this text is an essential read for anyone approaching the study of poverty for the first time. CORPORATE VERSUS NATIONAL INTEREST IN US TRADE POLICY Richard L. Bernal 2020-10-31 This book provides a history of the WTO US-EU banana dispute through the lens of a major actor: the US-owned multinational firm, Chiquita Brands International. It documents and explains how Chiquita succeeded in having the Clinton administration pursue a trade policy of forcing the European Union to dismantle its preferential banana import regime for exports from the small English-speaking Caribbean (ESC) countries. The export of bananas was critically important to the social stability and economic viability of these countries and that was in the national security interest of the United States. The experience indicates that succeeding in this goal was detrimental to U.S. national security interest in the Caribbean.

ACT OF GOD Garnet Hall 2016-09-02 Alan Livingston thought he had everything figured out. Graduate from college, got into law and eventually into politics. Until financial reality set in and he had to drop out after only two years. His goals were out of reach and options were few and far between. He hopped from job to job for a while, and tried everything from tree cutting to being a bouncer. Nothing stuck. Finally, he lands something both interesting and challenging. Alan has skills which help him as a private investigator. Respect for people, an unassuming manner, resourcefulness and a knack for finding the truth. Things might work out after all. Then he got a call in the middle of the night. At the airport in Lexington, Kentucky, Alan grabs his suitcase and rushes to get a car to investigate - a plane crash? What he finds will stay with him a long time.

WEAPON SYSTEMS HANDBOOK 2020-05-03 July 2019 Printed in BLACK AND WHITE The Army’s Weapon Systems Handbook was updated in July 2019, but is still titled “Weapon Systems Handbook 2018.” We are printing this in black and white to keep the price low. It presents many of the acquisition programs currently fielded or in development. The U.S. Army Acquisition Corps, with its 36,000 professionals, bears a unique responsibility for the oversight and systems management of the Army’s acquisition lifecycle. With responsibility for hundreds of acquisition programs, civilian and military professionals collectively oversee research, development and acquisition activities totaling more than \$20 billion in fiscal year 2016 alone. Why buy a book you can download for free? We print this so you don’t have to. We at 4th Watch Publishing are former government employees, so we know how government employees actually use the standards. When a new standard is released, somebody has to print it, punch holes and put it in a 3-ring binder. While this is not a big deal for a 5 or 10-page document, many DoD documents are over 400 pages and printing a large document is a time-consuming effort. So, a person that’s paid \$25 an hour is spending hours simply printing out the tools needed to do the job. That’s time that could be better spent doing mission. We publish these documents so you can focus on what you are there for. It’s much more cost-effective to just order the latest version from Amazon.com. PERFECT DIGITAL PHOTOGRAPHY Jay Dickman 2005-11-04 Written by photography experts—including a Pulitzer-Prize winning National Geographic photographer—this full-color book is a must-have for amateur photographers serious about improving both the quality of their photographs and their proficiency in the digital darkroom. The book is the perfect combination of a technical treatise on digital imaging and an artistic exploration of light, composition, and form, allowing you to glean the essential techniques needed for digital photography without losing sight of the artistic and aesthetic aspects of the craft. Using an easy-to-follow approach, the authors explain the image conceptualization process through shooting, editing, and image correction to finished print. In addition, top photographers from a variety of disciplines offer real-world advice on how they use digital photography to create compelling images for high-profile magazine articles, advertising campaigns, and fine art prints.

How to Survive the End of the World as We Know It James Wesley, Rawles 2009-09-30 Read James Wesley, Rawles’s posts on the Penguin Blog in the vein of Sam Sheridan’s The Disaster Diaries, a comprehensive guide to preparing for the apocalypse! With the recent economic crisis, formerly unimaginable scenarios have become terrifyingly real possibilities—learn how to prepare for the worst! Global financial collapse, a terrorist attack, a natural catastrophe—all it takes is one event to disrupt our way of life. We could find ourselves facing myriad serious problems from massive unemployment to a food shortage to an infrastructure failure that cuts off our power or water supply. If something terrible happens, we won’t be able to rely on the government or our communities. We’ll have to take care of ourselves. In How to Survive the End of the World as We Know It, James Rawles, founder of SurvivalBlog.com, clearly explains everything you need to know to protect yourself and your family in the event of a disaster—from radical currency devaluation to a nuclear threat to a hurricane. Rawles shares essential tactics and techniques for surviving completely on your own, including how much food is enough, how to filter rainwater, how to protect your money, which seeds to buy for your garden, why goats are a smart choice for livestock, and how to secure your home. It’s the ultimate guide to total preparedness and self-reliance in a time of need.

Hillis Miller has traveled to China to lecture on literary theory, especially the role of globalization in literary theory. Over time, he has assisted in the development of distinctly Chinese forms of literary theory, comparative literature, and World Literature. The fifteen lectures gathered in An Innocent Abroad span both time and geographic location, reflecting his work at universities across China for more than twenty-five years. More important, they reflect the evolution of Miller’s thinking and of the lectures’ contexts in China as these have markedly changed over the years, especially on either side of Tiananmen Square and in light of China’s economic growth and technological change. A foreword by the leading theorist Fredric Jameson provides additional context. **NADCA Product Specification Standards for Die Castings** Diecasting Development Council (North American Die Casting Association) 1994-01-01

Tissue Engineering Raj K. Keservani 2022 “This new volume on applications and advances in tissue engineering presents significant, state-of-the-art developments in this exciting area of research. It highlights some of the most important applied research on the applications of tissue engineering along with its different components, specifically different types of biomaterials. It looks at the various issues involved in tissue engineering, including smart polymeric biomaterials, gene therapy, tissue engineering in reconstruction and regeneration of visceral organs, skin tissue engineering, bone and muscle regeneration, and applications in tropical medicines. Covering a wide range of issues in tissue engineering, the volume provides an overview of the efficacy of the different biomaterials employed in tissue engineering (such as skin regeneration, nerve regeneration, artificial blood vessels, bone regeneration). Looks at smart polymeric biomaterials in tissue engineering Discusses the hybrid approach of tissue engineering in conjunction with gene therapy Explores using tissue engineering in the management of tropical diseases Considers various skin tissue engineering applications, including wound healing methods, skin substitutes and other materials Reports on the use of various biomaterials in bone and muscle regeneration Describes the use of tissue engineering in reconstruction and regeneration of visceral organs Covers polysaccharides and proteins-based hydrogels for tissue engineering applications Provides an abundance of advanced research and information, Tissue Engineering: Applications and Advancements will be a valuable resource for medical researchers, pharmaceutical manufacturers, healthcare personnel, and academicians”--

Modern Electric, Hybrid Electric, and Fuel Cell Vehicles Mehrdad Ehsani 2018-02-02 “This book is an introduction to automotive technology, with specific reference to battery electric, hybrid electric, and fuel cell electric vehicles. It could serve electrical engineers who need to know more about automobiles or automotive engineers who need to know about electrical propulsion systems. For example, this reviewer, who is a specialist in electric machinery, could use this book to better understand the automobiles for which the reviewer is designing electric drive motors. An automotive engineer, on the other hand, might use it to better understand the nature of motors and electric storage systems for application in automobiles, trucks or motorcycles. The early chapters of the book are accessible to technically literate people who need to know something about cars. While the rest of the book is historical in nature, the second chapter is a good introduction to automobiles, including dynamics of propulsion and braking. The third chapter discusses, in some detail, spark ignition and compression ignition (diesel) engines. The fourth chapter discusses the nature of transmission systems.” —James Kirtley, Massachusetts Institute of Technology, USA “The third edition covers extensive topics in modern electric, hybrid electric, and fuel cell vehicles, in which the profound knowledge, mathematical modeling, simulations, and control are clearly presented. Featured with design of various vehicle drivetrains, as well as a multi-objective optimization software, it is an estimable work to meet the needs of automotive industry.” —Haiyan Henry Zhang, Purdue University, USA “The extensive combined experience of the authors have produced an extensive volume covering a broad range but detailed topics on the principles, design and architectures of Modern Electric, Hybrid Electric, and Fuel Cell Vehicles in a well-structured, clear and concise manner. The volume offers a complete overview of technologies, their selection, integration and control, as well as an interesting technical overview of the Toyota Prius. The technical chapters are complemented with example problems and user guides to assist the reader in practical calculations through the use of common scientific computing packages. It will be of interest mainly to research postgraduates working in this field as well as established academic researchers, industrial R&D engineers and allied professionals.” —Christopher Donaghy-Spang, Durham University, United Kingdom The book deals with the fundamentals, theoretical bases, and design methodologies of conventional internal combustion engine (ICE) vehicles, electric vehicles (EVs), hybrid electric vehicles (HEVs), and fuel cell vehicles (FCVs). The design methodology is described in mathematical terms, step-by-step, and the topics are approached from the overall drive train system, not just individual components. Furthermore, in explaining the design methodology of each drive train, design examples are presented with simulation results. All the

Republic of Latvia International Monetary Fund. European Dept. 2019-08-07 This Selected Issues paper analyses the implications of global value chains (GVC) participation for Latvia’s competitiveness and exposure to risks. Using a structural model, it assesses Latvia’s competitiveness through different real effective exchange rate (REER) measures and examines the main factors behind differences in the measures. Based on this analysis, the paper suggests policy options to strengthen Latvia’s competitiveness. The paper also estimates the impact of an appreciation of the GVC related REER measure on value added export growth and real GDP growth, and finds sizable effects, suggesting that a rapid labor market tightening could lead to erosion in competitiveness and reduction in growth. Finally, trade tension induced tariff hikes may have significant cost for Latvia, especially in terms of value added produced in the country. Trade tension induced tariff hikes are likely to have moderate costs for Latvia in terms of value added produced in the country. In this regard, policies aimed at enhancing product sophistication or quality and export market diversification could mitigate Latvia’s exposure to trade shocks in GVCs.

Mahabali Denvor Fernandez 2020-08-04 When Mahabali, the Asura king who conquered the three worlds, reigned there was no crime or inequality. People enjoyed their fraternity and liberty to the fullest. The unhappy gods of the Sky World decide to take the help of Lord Vishnu to overthrow Mahabali. Millions of years later, a 21st-century narrator is chosen by God to tell the untold story of Mahabali’s life. Secrets soon begin to uncover. How did Mahabali create a Utopia on earth? Did Guru Sukracharya cheat him? Did he find true love? Is Mahabali still alive? Will he come again to regain his throne as the Emperor of the three worlds? Marine Biotoxins Hans P. Edmond 2004 This paper provides an extensive review of different aspects of five shellfish-poisoning syndromes (paralytic, diarrhetic, amnesic, neurologic and azapiracid), as well as one fish-poisoning syndrome (ciguatera fish poisoning), and discusses in detail the causative toxins produced by marine organisms, chemical structures and analytical methods of the toxins, habitat and occurrence of the toxin-producing organisms, case studies and existing regulations. Based on this analysis, risk assessments are carried out for each of the toxins, and recommendations are elaborated to improve the management of these risks in order to reduce the harmful effect of these toxins on public health.

Towards the Elimination of Rabies in Eurasia Betty Dodet 2008 This volume presents the proceedings of the second conference on rabies organized by the World Organisation for Animal Health in collaboration with the World Health Organization and the European Union in May 2007. Up-to-date information on rabies epidemiology in humans and animals throughout Europe, the Middle East and Asia, and the most recent data on rabies virus and its structure, as well as the basic mechanisms of rabies infection are included here. Experts in the field present their experience and opinions on the prevention and control of rabies in dogs, wildlife including bats, and the most recent developments in rabies prevention and management in humans. Further presentations address advances in technology, diagnosis and vaccine development. To conclude, resolutions and recommendations are given in English, French and Russian for the elimination of rabies not only in Europe and Asia, but also the rest of the world. This book is highly valuable to regulatory veterinary services, public health services, medical and veterinary practitioners, scientists and researchers interested in combating this neglected disease, which kills more than 50,000 persons annually, mainly children. Rabies elimination is at hand, through a ‘One Health’ strategic collaboration between veterinary and human health authorities, political will and community involvement, and application of the knowledge gained from this volume.
