The results show that 12 of the 17 antistatic sprays examined have a low infrared spectrophotometry, mass spectrometry, and ultraviolet spectrophotometry. Additionally, the chemical composition of the antistatic sprays is determined by corrosiveness on an aluminum mirror surface, and electrostatic effectiveness. In for contamination potential (i.e., outgassing and nonvolatile residue), the results indicate that antistatic sprays can be used on a limited basis where contamination potential, corrosiveness, and electrostatic effectiveness is not critical. Each application is different and proper evaluation of the situation is necessary. Information on some of the properties of some antistatic sprays is presented in this document to aid in the evaluation process. Ming, James E. Goddard Space Flight Center Manual of regulations and procedures for Federal radio frequency management United States, Interdepartment Radio Advisory Committee 1979 Billions 1973-05-12 In its 114th year, Billboard remains the world's premier weekly music publication and a diverse digital, events, brand, content and data licensing platform.
