definitive work that demystifies the ever-VERSATILE metaphor. Whether you are a novice or an expert clinician, you will find a treasure chest of story interventions along with the 'inside scoop' on how each was created and applied to bring success in nineteen unforgettable case chapters. Better yet, you'll be able to create your own healing metaphors thanks to the expert guidance of a wide range of talented storytellers. Don't miss out on this one! --Maggie Phillips, PhD, author of Finding the Energy to Heal and coauthor of Healing the Divided Self. 'If you want to be inspired, entertained, and enlightened, Healing with Stories is the book to read, George Burns, a master storyteller, has assembled a creative, diverse group of clinicians to share their ideas about how metaphor can be used with a variety of problems and clients. The result is a fascinating array of insights into metaphor's role in the healing process.' —Richard G. Whiteside, MD, author of Becoming Dragon.

National Library of Medicine Current Catalog National Library of Medicine (U.S.) 1988 Final Solutions Richard M. Lerner 2010-11 The nature-nurture debate continues to stir controversy in the social and behavioral sciences. How much of human behavior and development can be attributed to biology and how much to the environment? Can either be said to “determine” human development? What are the implications of each view for society? In this important study, a noted developmental psychologist makes a contribution to this debate by confronting the difficult issue of “determinism” of human development and the consequences for society of the question of whether or not the environment is in any way causal in the development of human beings.

Richard M. Lerner was awarded a Nobel Prize in 1973, was a critical figure in the development of the most recent manifestation of biological determinism-sociobiology. Lerner examines the work of Lorenz and current sociobiologists and the implications of their claims for modern society. He fears that biological determinism may even be co-opted to serve the political agenda of today's reactionary politicians. In fact, Lerner notes, sociobiologists have had to face the fact that organizations such as the fascist National Front party in Britain and its counterparts in France and the United States have selectively seized upon sociobiology to fuel their notions of genetically superior and inferior races.

The Psychology of Environmental Problems Susan M. Koger 2011-01-07 This textbook demonstrates how eight major approaches in psychology can be applied to create a more sustainable society facing environmental threats. It can be used as test in Ecological Psychology, Environmental Science/Education, and Sustainability Sciences. It is also a valuable resource for policymakers, legislators, and those working on sustainable communities.

Bergin and Garfield's Handbook of Psychotherapy and Behavior Change Michael B. Fish 2011-10-15 The new 50th anniversary edition of this renowned Handbook offers state-of-the-art updates to the key areas in psychotherapy research and practice. Over 400 authors, experts in their fields, from over 100 countries have contributed to this anniversary edition, providing in-depth, measured and insightful summaries of the current field.

Encyclopedia of Creativity Mark A. Runco 1999 This encyclopedia provides specific information and guidance for everyone who is searching for a greater understanding. The text includes theories of creativity, techniques for enhancing creativity and individuals who have contributed to creativity.

Handbook of Self-determination Research Edward L. Deci 2004 Papers addressing the role which human motivation plays in a wide range of specialties including clinical psychology, internal medicine, sports psychology, social psychology, and educational psychology.

Directory of Corporate Affiliations 2004 Described as “Who owns whom, the family tree of every major corporation in America,” the directory is indexed by name (parent and subsidiary), geographic location, Standard Industrial Classification (SIC) Code, and corporate responsibilities.

Consumer Behaviour Analysis: The behavioural economics of consumption G. R. Foxall 2002 Marketing Psychology G. R. Foxall 1999-09-11 Marketing Psychology portrays the behaviour of consumers as influenced by its environmental consequences and extends this analysis to marketing management by proposing a novel understanding of the marketing firm. The book undertakes a behaviour analysis of consumer choice, based on a critical extension of radical behaviourism to the interpretation of human economic behaviour. This suggests that consumer behaviour is explained by locating it among the environmental contingencies that shape and maintain it. This is a result of viewing consumer choice and marketing response as being currently understood with profound managerial and policy implications.

Energy And Material Resources K. David Conn 2013-03-04 Knowledge of public attitudes and values is essential to the formulation and implementation of government policies affecting energy and other natural resources, but it is difficult to obtain and use this knowledge, for the pertinent issues are complex and involve such difficult-to-find concepts as degree of acceptable risk for both present and future generations. Recently, survey researchers have attempted to measure and explain public attitudes related to energy and resource conservation. This volume examines which policymakers may need to or would like to know about these attitudes, what kinds of results the researchers have been able to obtain, and the extent to which their results currently influence the policymaking process.

Interpreting Consumer Choice Gordon Foxall 2009-09-10 Interpretive consumer research usually proceeds with a minimum of structure and preconceptions. This book presents a more structured approach than is usual, showing how a single framework that embodies the rewards and costs associated with consumer choice can be used to interpret a wide range of consumer behaviours from everyday purchasing and saving, innovative choice, imitation, 'green' consumer behavior, to compulsive behaviors such as addictions (to shopping, to gambling, to alcohol and other drugs, etc.). Foxall takes a qualitative approach to interpreting behavior, focusing on the epistemological problems that arise in such research and emphasizing the emotional as well as cognitive aspects of consumption. The author argues that consumer behaviour can be understood with the aid of a very simple model that proposes how the consequences of consumption impact consumers' subsequent choices. The objective is to show that a basic model can be used to interpret consumer behaviour in general, not in isolation from the marketing influences that shape it, but as a course of human choice that is dynamically linked with managerial concerns.
