Sports Law Patrick K. Thornton 2010-02-04 Sports Law looks at major court cases, statutes, and regulations that explore a variety of legal issues in the sports industry. The early chapters provide an overview of sports law in general terms and explore its impact on race, politics, religion, and everyday affairs. Later chapters address hot button issues such as gender equity, drug testing, and discrimination. Written from a sport management perspective, rather than from a lawyer's, this text covers all the major areas presented in sports law today including: cases relating to torts, contracts, intellectual property, and agents. Factual scenarios throughout the text allow students to critically examine and apply sport management principles to legal issues facing the sports executive. Bodyfever Amy Lane 2013-03-27 Ten years ago Sheriff's Deputy Aaron George lost his wife and moved to Colton, hoping growing up in a small town would be better for his children. He's gotten to know his community, including Mr. Larkin, the bouncy, funny science teacher. But when Lark is dragged unwillingly into administration, he steps coaching the track team and starts running alone. Aaron—who thought life began and ended with his kids—is distracted by a glinting chest and a principal running on a dangerous road. Lark has been living for his kids too—and for his students at Colton High. He's not ready to be charmed by Aaron, but when they start running together, he comes to appreciate the deputy's steadiness, humor, and complete understanding of Lark's priorities. Parenthood Dalton Conley 2014-03-18 An award-winning scientist offers his unorthodox approach to child-rearing: "Parenthood is brilliant, jaw-droppingly funny, and full of wisdom—bound to change your thinking about parenting and its consequences" (Amy Chua, author of Battle Hymn of the Tiger Mother). If you like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed child-rearing advice, he turned to scientific research to make the big decisions. In Parenthood, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). He also unearths surprising connections between child-rearing and adult responsibilities: • Globe and Mail Her name was Henrietta Lacks, but scientists know her as HeLa.
