In calculus, the quotient rule is a method of finding the derivative of a function that is the ratio of two differentiable functions. Let $h(x) = f(x)/g(x)$, where both f and g are differentiable and $g(x) \neq 0$. The quotient rule states that the derivative of $h(x)$ is $h'(x) = (f'(x)g(x) - f(x)g'(x))/g(x)^2$.

Calculus (Differential and Integral Calculus with Examples) - BYJUS

Calculus is the branch of mathematics that deals with continuous change. Calculus is also called infinitesimal calculus or "the calculus of infinitesimals". The meaning of classical calculus is the study of continuous change of functions. Most of these quantities are the functions of time such as velocity is equal to change in distance with respect to time.
