Jan 21, 2020 · Calculus is a branch of mathematics that involves the study of rates of change. Before calculus was invented, all math was static: It could only help calculate objects that were perfectly still. But the universe is constantly moving and changing. No objects—from the stars in space to subatomic particles or cells in the body—are always at rest.

In calculus, the quotient rule is a method of finding the derivative of a function that is the ratio of two differentiable functions. Let $h(x) = f(x)/g(x)$, where both f and g are

differentiable and $g(x) \neq 0$. The
quotient rule states that the

derivative of $h(x) = \frac{f(x)}{g(x)}$ is $h'(x) = \frac{f'(x)g(x) - f(x)g'(x)}{g(x)^2}$.
