Czech and Slovak Railways Ketih Fender 2022-07-31 The Czech Republic and Slovakia emerged as independent countries in 1993, as joint successors of the former Czechoslovakia. Having once been a single country, with a single national railway operator, the change was significant, although both countries, and their railways, still have a lot in common. Loco types have changed through modernization and rebuilding, and both countries have retained very different narrow-gauge systems that are still in daily operation. Both countries have invested in modern fleets, and rail freight has boomed thanks to globalization and EU membership, resulting in a wide variety of trains. Spanning three decades, this book explores the history of both countries and their railways, and features over 140 pictures, most of which have never been published before. The book concludes by looking at the ambitious plans for new high-speed networks, connecting both countries, and most of their neighbors by the late 2030s.

Computational Partial Differential Equations Using MATLAB® Jichun Li 2019-09-26 In this popular text for an Numerical Analysis course, the authors introduce several major methods of solving various partial differential equations (PDEs) including elliptic, parabolic, and hyperbolic equations. It covers traditional techniques including the classic finite difference method, finite element method, and state-of-the-art numerical methods. The text uniquely emphasizes both theoretical numerical analysis and practical implementation of the algorithms in MATLAB. This new edition includes a new chapter, Finite Value Method, the presentation has been tightened, new exercises and applications are included, and the text refers now to the latest release of MATLAB. Key Selling Points: A successful textbook for an undergraduate text on numerical analysis or methods taught in mathematics and computer engineering. This course is taught in every university throughout the world with an engineering department or school. Competitive advantage broader numerical methods (including finite difference, finite element, meshless method, and finite volume method), provides the MATLAB source code for most popular PDEs with detailed explanation about the implementation and theoretical analysis. No other existing textbook in the market offers a good combination of theoretical depth and practical source codes.

The Use of the Eyes in Movement Jack Heggie 2011-11-15 The eyes initiate and control most motor behavior. Working with the

relationship of the eyes to the rest of the body can be a powerful means to improve physical organization and functioning. Jack Heggie combines the theory and practice of "Awareness Through Movement"(r) with the vision improvement of Dr. William Bates and has developed 13 "Awareness Through Movement" vision exercises which reduce eye strain and improve posture, flexibility and visual acuity.

The Hidden Art of Interviewing People Neil McPhee 2007-06-13 There is growing interest in the use of Neuro Linguistic Programming (NLP) as a Qualitative Market Research

technique. NLP was previously used in psychology to understand how people think and react, and as a tool in self-development, interpersonal skills and business, looking at how our brains think and experience the world. Qualitative Market research experts now see that using NLP can help the researchers understand the human brain and, armed with this power, they can find out the truth from interviewees. The Hidden Art of Interviewing People shows how, by using NLP and related techniques in interviews, the market researcher can see beyond the obvious to the truth.

The Australian Locomotive Guide Peter Clark 2012-11

Describes the Diesel and Electric locomotives used on the main line and export mineral railways in Australia and the operating preserved steam locomotives used both on preserved lines and on main lines. Diesel locomotives are listed according to the type of Diesel engine and arranged to show the development of a particular type of locomotive. Entries progressing from lower power to higher power units. This layout shows the similarity of types used on different systems, particularly in the area of State government railways. The Electric locomotives are grouped by system in chronological order Steam locomotives are organised by wheel arrangement since this brings together similar locomotives from different systems. Covers all the diesel and electric locomotives used by the Australian main line railways whether still in service or not. Many diesel locomotives are now being used for secondary duties by smaller operators or leased by larger operators as required.

Home of the Ashfall : a Memoir John Jack G. Wigley 2014

Rail Transport—Systems Approach Aleksander Sładkowski 2017-03-08 This book shows how the systems approach is employed by scientists in various countries to solve specific problems concerning railway transport. In particular, the book describes the experiences of scientists from Romania, Germany, the Czech Republic, the UK, Russia, Ukraine, Lithuania and Poland. For many of these countries there is a problem with the historical differences between the railways. In particular, there are railways with different rail gauges, with different signaling and communication systems, with different energy supplies and, finally, with different political systems, which are reflected in the different approaches to the management of railway economies. The book's content is divided into two main parts, the first of which provides a systematic analysis of individual means of providing and maintaining rail transport. In turn, the second part addresses infrastructure and management development, with particular attention to security issues. Though primarily written for professionals involved in various problems concerning railway transport, the book will also benefit manufacturers, railway technical staff, managers, and students with transport specialties, as well as a wide range of readers interested in learning more about the current state of transport in different countries.

Earthmovers in Scotland: Mining, Quarries, Roads & Forestry

David Wylie 2016-11-04 As Scottish Correspondent for Earthmovers Magazine, David Wylie has enjoyed privileged access to the mines, quarries, road projects and forestry sites across Scotland. On his visits he has seen some of the biggest and arguably the best, earthmoving machinery in the world, in action. Earthmovers in Scotland brings together 32 of David's reports from these visits to tell the story of the highly skilled, experienced owners, drivers and managers that work with earthmoving

equipment and explains why they select, maintain and operate these machines. The book features some of the largest earthmovers in the UK, such as Caterpillar's D11R bulldozer, Liebherr's massive 320 tonne R9350s and the mighty 520 tonne Q&K RH200 at Banks Mining Shotton surface mine in Northumberland, a short hop over the Scottish border. It also takes a look at a 1.5 tonne mini digger, special trailers that can lift and transport 1800 tonne bridges into position, and covers Demag's H485 record breaking mining shovel amongst others. Taking pride of place in the book are over 400 stunning photographs, many of which have not been seen before and many of which feature machines that were the first of their kind. Each high quality photo has been carefully composed to capture each machine in all its power and brilliance with the spectacular Scottish scenery as a backdrop and 80 of the most important and detailed images are presented as double pages to help you get close to the action. This beautiful book sets out to provide its owner with a comprehensive look at Scottish earthmovers scene, and will be of interest to enthusiasts, owners, drivers and site managers worldwide.

Clean Fuel Supply Organisation for Economic Co-operation and Development 1978

Diesel Fuel Oils 1960

19. Internationales Stuttgarter Symposium Michael Bargende 2019-05-24 In einer sich rasant verändernden Welt sieht sich die Automobilindustrie fast täglich mit neuen Herausforderungen konfrontiert: Der problematischer werdende Ruf des Dieselmotors, verunsicherte Verbraucher durch die in der Berichterstattung vermischte Thematik der Stickoxid- und Feinstaubemissionen, zunehmende Konkurrenz bei Elektroantrieben durch neue Wettbewerber, die immer schwieriger werdende öffentlichkeitswirksame Darstellung, dass ein großer Unterschied zwischen Prototypen, Kleinserien und einer wirklichen Großserienproduktion besteht. Dazu kommen noch die Fragen, wann die mit viel finanziellem Einsatz entwickelten alternativen Antriebsformen tatsächlich einen Return of Invest erbringen, wer die notwendige Ladeinfrastruktur für eine Massenmarkttauglichkeit der Elektromobilitätsbauten und finanzieren wird und wie sich das alles auf die Arbeitsplätze auswirken wird. Für die Automobilindustrie ist es jetzt wichtiger denn je, sich den Herausforderungen aktiv zu stellen und innovative Lösungen unter Beibehaltung des hohen Qualitätsanspruchs der OEMs in Serie zu bringen. Die Hauptthemen sind hierbei, die Elektromobilität mit höheren Energiedichten und niedrigeren Kosten der Batterien voranzutreiben und eine wirklich ausreichende standardisierte und zukunftsichere Ladeinfrastruktur darzustellen, aber auch den Entwicklungspfad zum schadstofffreien und CO₂-neutralen Verbrennungsmotor konsequent weiter zu gehen. Auch das automatisierte Fahren kann hier hilfreich sein, weil das Fahrzeugverhalten dann - im wahrsten Sinne des Wortes - kalkulierbarer wird. Dabei ist es für die etablierten Automobilhersteller strukturell nicht immer einfach, mit der rasanten Veränderungsgeschwindigkeit mitzuhalten. Hier haben Start-ups einen großen Vorteil: Ihre Organisationsstruktur erlaubt es, frische, unkonventionelle Ideen zügig umzusetzen und sehr flexibel zu reagieren. Schon heute werden Start-ups gezielt gefördert, um neue Lösungen im Bereich von Komfort, Sicherheit, Effizienz und neuen Kundenschnittstellen zu finden. Neue Lösungsansätze, gepaart mit Investitionskraft und Erfahrungen, bieten neue Chancen auf dem Weg der Elektromobilität, der Zukunft des Verbrennungsmotors und ganz allgemein für das Auto der Zukunft.
