School-Based Management

Lori Jo Oswald, Ph.d. 2014-09-25 School-based management (SBM), the decentralization of decision-making authority to the school site, comes in many variations. However, all forms of SBM require a rethinking of how and

where budgeting, curriculum, and personnel decisions are made. This book provides an overview of what SBM is and how it is implemented by summarizing some of the educational research in this area. Throughout, examples are provided from Oregon schools, particularly the Salem-Keizer Public Schools, which implemented SBM in 1989. Interviews with 14 administrators and educators supplement the literature review. Chapter 1 provides definitions and an overview of SBM philosophy, with a list of advantages and disadvantages. Chapter 2 explains the change in roles and responsibilities of the "stakeholders": the school board, superintendent and district office, principal, teachers, parents and community

members, and students. In each section, a list of concerns about the role transition is included. Strategies for enlisting stakeholder involvement in the successful implementation of SBM are discussed in the third chapter. Chapter 4 explains the function of the school council, with particular attention to Oregon site-based councils. The fifth chapter lists additional implementation guidelines, focusing on budget, personnel, and curriculum. Chapter 6 discusses issues related to and methods of determining SBM success. Finally, recommendations and conclusions are made in the seventh chapter.

Forms of Modernity

Rachel Lynn Schmidt
2011-01-01 It's a critical cliché that Cervantes' Don Quixote is the first modern novel, but this distinction raises two fundamental questions. First, how does one

define a novel? And second, what is the relationship between this genre and understandings of modernity? In *Forms of Modernity*, Rachel Schmidt examines how seminal theorists and philosophers have wrestled with the status of Cervantes' masterpiece as an 'exemplary novel', in turn contributing to the emergence of key concepts within genre theory. Schmidt's discussion covers the views of well-known thinkers such as Friedrich Schlegel, José Ortega y Gasset, and Mikhail Bakhtin, but also the pivotal contributions of philosophers such as Hermann Cohen and Miguel de Unamuno. These theorists' examinations of Cervantes's fictional knight errant character point to an ever-shifting boundary

between the real and the virtual. Drawing from both intellectual and literary history, *Forms of Modernity* richly explores the development of the categories and theories that we use today to analyze and understand novels.

Brain Matters Patricia Wolfe 2010-09-15

Everyone agrees that what we do in schools should be based on what we know about how the brain learns. Until recently, however, we have had few clues to unlock the secrets of the brain. Now, research from the neurosciences has greatly improved our understanding of the learning process, and we have a much more solid foundation on which to base educational decisions. In this completely revised and updated second edition, Patricia Wolfe clarifies how we can effectively match teaching practice

with brain functioning. Encompassing the most recent and relevant research and knowledge, this edition also includes three entirely new chapters that examine brain development from birth through adolescence and identify the impact of exercise, sleep, nutrition, and technology on the brain. *Brain Matters* begins with a "mini-textbook" on brain anatomy and physiology, bringing the biology of the brain into context with teaching and learning. Wolfe describes how the brain encodes, manipulates, and stores information, and she proposes implications that recent research has for practice—why meaning is essential for attention, how emotion can enhance or impede learning, and how different types of rehearsal are necessary

for different types of learning. Finally, Wolfe introduces and examines practical classroom applications and brain-compatible teaching strategies that take advantage of simulations, projects, problem-based learning, graphic organizers, music, active engagement, and mnemonics. These strategies are accompanied by actual classroom scenarios—spanning the content areas and grade levels from lower elementary to high school—that help teachers connect theory with practice.

The Disabled & Their Parents Leo F. Buscaglia 1994 Discusses the emotional needs of disabled people and their families and examines methods for helping the handicapped to live fulfilling lives
Results Now Mike

Schmoker 2006-06-30
According to author Mike Schmoker, there is a yawning gap between the most well-known essential practices and the reality of most classrooms. This gap persists despite the hard, often heroic work done by many teachers and administrators. Schmoker believes that teachers and administrators may know what the best practices are, but they aren't using them or reinforcing them consistently. He asserts that our schools are protected by a buffer—a protective barrier that prevents scrutiny of instruction by outsiders. The buffer exists within the school as well. Teachers often know only what is going on in their classrooms—and they may be completely in the dark about what other teachers in the school

are doing. Even principals, says Schmoker, don't have a clear view of the daily practices of teaching and learning in their schools. Schmoker suggests that we need to get beyond this buffer to confront the truth about what is happening in classrooms, and to allow teachers to learn from each other and to be supervised properly. He outlines a plan that focuses on the importance of consistent curriculum, authentic literacy education, and professional learning communities for teachers. What will students get out of this new approach? Learning for life. Schmoker argues passionately that students become learners for life when they have more opportunities to engage in strategic reading, writing with explicit guidance, and argument and discussion.

Through strong teamwork, true leadership, and authentic learning, schools and their students can reach new heights. Results Now is a rally cry for educators to focus on what counts. If they do, Schmoker promises, the entire school community can count on unprecedented achievements.

"Finnish pupils' success in international student assessment tests and the characteristics of the Finnish educational system are the focus of interest all around in the world. The significance of Finnish educational policy and societal atmosphere are continuously discussed. This book provides explanations, answers and reflections to these questions. Over 30 expert authors have contributed to this book by bringing their own specific research-based points of view. The second edition of the book introduces the new national curriculum for basic education that now provides guidelines for school-based curricula. Students' learning with engagement and schools as learning communities are core visions of the reform. The authors also reflect on the PISA 2012 results. The book gives

an example on how to use PISA information for national improvements. In Finland, all evaluations are enhancement-led and this also includes PISA measurements. The book illustrates how teaching and learning of different subjects is realized in Finnish schools and describes the essential characteristics and methods of teaching, learning materials and research on these issues. The book provides important insight and reflections to international researchers, teachers, students, journalists and policy makers, who are interested in teaching and learning in Finnish schools. It shows the results of the systematic and persistent work that has been done on education and schooling in Finland. The main

features of education in Finland are: Strong equity policy. Teachers as autonomous and reflective academic experts. Flexible educational structures and local responsibility for curriculum development. Evaluation for improvements, not for ranking. No national testing, no inspectorate. Research-based teacher education. Teachers' high competence in content knowledge and pedagogy. What We Owe Children
Caleb Gattegno 2010 How do children learn? How are they taught? These are two fundamental questions in education. Caleb Gattegno provides a direct and lucid analysis, and concludes that much current teaching, far from feeding and developing the learning process, actually stifles it. Memory, for instance, the weakest of the mental powers available for intelligent use, is almost the only faculty to be exploited in the educational system, and holds little value in preparing a student for the future. Gattegno's answer is to show how learning and teaching can properly work together, what schools should achieve, and what parents have a right to expect.

International Research on Multilingualism: Breaking with the Monolingual Perspective

Eva Vetter 2019-10-22

This volume contributes to a better understanding of both psycho- and sociolinguistic levels of multilingualism and their interplay in development and use. The chapters stem from an international group of specialists in multilingualism with chapters from Austria, Canada, Germany,

Hungary, Israel, Italy, Slovakia, South Africa, Spain and the United States. The chapters provide an update on research on third language acquisition and multilingualism, and pay particular attention to new research concepts and the exploration of contact phenomena such as transfer and language learning strategies in diverse language contact scenarios. Concepts covered include dominant language constellations, mother tongue, germination factors and communicative competence in national contexts. Multilingual use as described and applied in the volume aims at demonstrating and identifying current and future challenges for research on third language acquisition and multilingualism. The third languages in focus include widely and less widely used official,

minority and migrant languages in instructed and/or natural contexts, including Albanian, Arabic, Basque, English, French, German, Hungarian, Italian, Romanian, Spanish, Punjabi, Russian, Turkish, and Vietnamese, thereby mapping a high variety of language constellations.

Parentology

Dalton Conley 2014-03-18 An award-winning scientist offers his unorthodox approach to childrearing:

“Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions” (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you’re like many

parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to

getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley’s sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You’ll be laughing and learning at the same time.

The Chicano Latino

He looks to me more like a ñî Tiburcio glanced at the manís face, ñ a Luis.î Mrs. Renteriaís neighbors call out a litany of names that better suit the mysterious corpse: Roberto, Antonio, Henry, Enrique, Miguel, Roy, Rafael. The very first winner of the Chicano / Latino Literary Prize in 1974, Ron Ariasí ñThe Wetbackî uses dark humor to reflect on the appearance of a dead

brown man in their midst. This landmark collection of prize-winning fiction, poetry, and drama paints a historical and aesthetic panorama of Chicana/o and Latina/o letters over a twenty-five-year period beginning in 1974 and ending in 1999. Most, but not all, of the winning entries are featured in this anthology, which also includes second- and third-place winners, as well as honorable mentions. Now entering its thirty-first year, the award has recognized a wide variety of writers, from established ones such as Juan Felipe Herrera, Michael Nava, and Helena Maria Viramontes, to those that are lesser known. Many of the pieces in this anthology are considered to be foundational texts of Chicana/o and Latina/o literature, and those

that are not as widely recognized deserve more serious study and attention. Presented in chronological order, the selected writings are primarily in English, although some are written in Spanish, and others in Spanglish. Some, like Francisco X. Alarcon's poem "Raíces / Roots," appear in both languages: "Mis raíces / las cargo / siempre /

conmigo / enrolladas / me sirven / de almohada." "I carry / my roots / with me / all the time / rolled up / I use them / as my pillow." In addition to the diverse array of authors, styles, and genres, the works included in this collection cover a wide range of themes, from more political issues of ethnic, gender, and class.
