world’s 900 million extremely poor rural people. Every day, indigenous communities all over the world face issues of violence and brutality. Indigenous peoples are stewards of some of the most biologically diverse areas of the globe, and their assets at risk have also increased, with consequences for disaster risk. Opportunities for managing risks of weather- and climate-related disasters exist or can be developed at any scale, local to international. Prepared following strict IPCC procedures, SREX is an invaluable assessment for anyone interested in climate extremes, environmental disasters and adaptation to climate change, including policymakers, the private sector and academic researchers.

The world’s health needs are greater than ever. The COVID-19 pandemic has highlighted the fragility of our healthcare systems, the importance of universal health coverage, and the urgent need for more equity in health outcomes. The health crisis, in combination with the economic and social upheaval resulting from wider trends, has underscored the need for a fundamental shift in the management of health and healthcare systems.

Extreme weather and climate events, interacting with exposed and vulnerable human and natural systems, can lead to disasters. Changes in the frequency and severity of extreme weather and climate events, for example, have been linked to an increased risk of flooding, heatwaves, and droughts. The World Bank Group’s latest report, "Managing the Risks of Climate Extremes to Advance Climate Change Adaptation," examines the role of risk management in climate change adaptation and highlights effective strategies that can help mitigate the impacts of extreme weather and climate events. The report emphasizes the importance of integrating risk management into climate change adaptation efforts to ensure that communities are better prepared to withstand and recover from the impacts of extreme weather and climate events.
