AS-Level Maths Edexcel Complete Revision & Practice Richard Parsons 2010-11 AS-Level Maths Edexcel Complete Revision and Practice L2 vocabulary acquisition, knowledge and use Camilla Bardel 2013 This book is intended for researchers and students in the field of second language (L2) acquisition. As its title suggests, the book discusses L2 vocabulary acquisition, knowledge and use, and examines them from the perspectives of assessment and corpus analysis. The chapters also address some additional central research issues: the role of word frequency in the input, the difference between single words and multi-word units, and the distinction between vocabulary of oral and written language. The first three chapters of the book present critical reviews of different aspects of vocabulary acquisition. The other four chapters contain empirical studies that relate to the central themes of the book. The data in the studies draw on a variety of source and target languages: English, French, Italian, Swedish, Hebrew and Japanese. The book offers some new insights into the field of vocabulary and suggests avenues of research.

Parentology Dalton Conley 2014-03-18 An award-winning scientist offers his unorthodox approach to childrearing: “Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions” (Amy Chua, author of Battle Hymn of the Tiger Mother). If you’re like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on time-worn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In Parentology, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley’s sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You’ll be laughing and learning at the same time.
