Kumukanda Kayo Chingonyi
2017-06-01 *Winner of the Dylan Thomas Prize 2018* *Winner of the Somerset Maugham Award 2018* 'A brilliant debut - a tender, nostalgic and, at times, darkly hilarious exploration of black boyhood, masculinity and grief. A gorgeous and necessary collection from one of my favourite writers' Warsan Shire
Translating as 'initiation', kumukanda is the name given to the rites a young boy from the Luvale tribe must pass through before he is considered a man. The poems of Kayo Chingonyi's remarkable debut explore this

passage: between two worlds, ancestral and contemporary; between the living and the dead; between the gulf of who he is and how he is perceived.

Underpinned by a love of music, language and literature, here is a powerful exploration of race, identity and masculinity, celebrating what it means to be British and not British, all at once. *Shortlisted for the Costa Poetry Prize; Seamus Heaney Centre First Poetry Collection Prize; Ted Hughes Award for New Work in Poetry; Roehampton Poetry Prize; Jhalak Prize 2018*

Public Examinations Examined

Thomas Kellaghan 2019-11-19

High-stakes public examinations exert a dominant influence in most education systems. They affect both teacher and student behavior, especially at the middle and upper levels of secondary education. The content of past examinations tends to dictate what is taught and how it is taught and, more important, what is learned and how it is learned. By changing aspects of these examinations, especially their content and format, education systems can have a strong positive impact on teacher behavior and student learning, help raise student achievement levels, and better prepare students for tertiary-level education and for employment. Examination agencies, many of which have followed the same procedures over decades, can learn from the successes and

failures of other systems. This book addresses current issues related to the development, administration, scoring, and usage of these high-stakes public examinations, identifying key issues and problems related to examinations in many emerging market economies as well as in advanced economies. The book's primary audience consists of public examination officials on national, regional, and state examination boards, but the book should also be of interest to senior education policy makers concerned with certification and learning achievement standards, to academics and researchers interested in educational assessment, to governmental and education agencies responsible for student selection, and to professionals at development organizations. "This extremely well-written and comprehensive book offers a timely review of the diversity of public examination practices worldwide;

of the tensions between examinations and learning; and of the technical expertise involved in the creation of valid, reliable, and fair assessments. It reminds us that as “the diploma disease” takes hold with an ever-greater intensity at every stage of education worldwide, and the commercial business of testing flourishes, those concerned with educational quality and meaningful learning must be on guard to prevent the assessment tail wagging the educational dog.” Angela W. Little, Professor Emerita, Institute of Education, University College London “This book is very well structured and written and draws on the authors’ remarkable global knowledge across countries and histories. It will be a great asset both to administrators responsible for examinations and to academics and other professionals who seek to understand the nature and impact of examinations of

different types and in different settings.” Mark Bray, UNESCO Chair Professor of Comparative Education, University of Hong Kong; and former Director, UNESCO International Institute for Educational Planning “I am sure that Public Examinations Examined, which thoroughly analyzes the practice of public examinations in different countries and makes profound and well-grounded conclusions, will arouse very great interest and will serve to further improve public examinations.” Victor Bolotov, Distinguished Professor, Higher School of Economics, National Research University, Moscow; member, Russian Academy of Education; and former Deputy Minister of Education, Russian Federation

shore. In their place, job categories that require knowledge management, abstract reasoning, and personal services seem to be growing. The modern workplace requires workers to have broad cognitive and affective skills. Often referred to as "21st century skills," these skills include being able to solve complex problems, to think critically about tasks, to effectively communicate with people from a variety of different cultures and using a variety of different techniques, to work in collaboration with others, to adapt to rapidly changing environments and conditions for performing tasks, to effectively manage one's work, and to acquire new skills and information on one's own. The National Research Council (NRC) has convened two prior workshops on the topic of 21st century skills. The first, held in 2007, was designed to examine research on the skills required for

the 21st century workplace and the extent to which they are meaningfully different from earlier eras and require corresponding changes in educational experiences. The second workshop, held in 2009, was designed to explore demand for these types of skills, consider intersections between science education reform goals and 21st century skills, examine models of high-quality science instruction that may develop the skills, and consider science teacher readiness for 21st century skills. The third workshop was intended to delve more deeply into the topic of assessment. The goal for this workshop was to capitalize on the prior efforts and explore strategies for assessing the five skills identified earlier. The Committee on the Assessment of 21st Century Skills was asked to organize a workshop that reviewed the assessments and related research for each of the five skills identified at the

previous workshops, with special attention to recent developments in technology-enabled assessment of critical thinking and problem-solving skills. In designing the workshop, the committee collapsed the five skills into three broad clusters as shown below:

Cognitive skills: nonroutine problem solving, critical thinking, systems thinking

Interpersonal skills: complex communication, social skills, team-work, cultural sensitivity, dealing with diversity

Intrapersonal skills: self-management, time management, self-development, self-regulation, adaptability, executive functioning

Assessing 21st Century Skills provides an integrated summary of the presentations and discussions from both parts of the third workshop.

consolidated power in Germany and was leading the world into war. A young foreign correspondent was on hand to bear witness. More than two decades prior to the publication of his acclaimed history, *The Rise and Fall of the Third Reich*, William L. Shirer was a journalist stationed in Berlin. During his years in the Nazi capital, he kept a daily personal diary, scrupulously recording everything he heard and saw before being forced to flee the country in 1940. *Berlin Diary* is Shirer's first-hand account of the momentous events that shook the world in the mid-twentieth century, from the annexation of Austria and Czechoslovakia to the fall of Poland and France. A remarkable personal memoir of an extraordinary time, it chronicles the author's thoughts and experiences while living in the shadow of the Nazi beast. Shirer recalls the surreal spectacles of the Nuremberg

rallies, the terror of the late-night bombing raids, and his encounters with members of the German high command while he was risking his life to report to the world on the atrocities of a genocidal regime. At once powerful, engrossing, and edifying, *William L. Shirer's Berlin Diary* is an essential historical record that illuminates one of the darkest periods in human civilization.

Commons: Education Committee
2013-06-11 The 2012 GCSE
English results prompted
significant controversy, which
ultimately resulted in an
application for judicial review.
This report sets out the
background to these events and
identifies lessons to be learned.
The problems with GCSE
English can be traced back to the
2007-09 development phase of
the qualification- in particular the
turbulence which resulted from
the shift away from a mostly
linear to a modular system,
combined with a high proportion
of controlled assessment and
generous marking tolerances.
Exam board experts raised
concerns at the time, but these
were not acted upon by the
regulator (the then-interim
Ofqual). Further difficulties arose
because of pressures from the
school accountability system. The
problems experienced with
GCSE English in 2012
highlighted serious weaknesses

in the moderation of speaking
and listening, with consequences
for grade awarding. The current
status of Ofqual, as an
independent regulator
accountable to Parliament, is the
right one. However, the Coalition
Government is bringing in
wholesale changes to GCSEs and
A levels, to a tight timetable and
at the same time. Ofqual must
have systems in place. The
Committee is also concerned that
there is a rush towards separate
exam systems for England, Wales
and Northern Ireland, without
careful reflection on what might
be lost, or consensus that this is
the right thing to do.
