Parentology  Dalton Conley
2014-03-18  An award-winning scientist offers his unorthodox approach to childrearing: “Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions” (Amy Chua, author of Battle Hymn of the Tiger Mother). If you’re like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In Parentology, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley’s sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You’ll be laughing and learning at the same time.

Grading for Equity Joe Feldman 2018-09-25 “Joe Feldman shows us how we can use grading to help students become the leaders of their own learning and lift the veil on how to succeed. . . . This must-have book will help teachers learn to implement improved,
“equity-focused grading for impact.” --Zaretta Hammond, Author of Culturally Responsive Teaching & The Brain Crack open the grading conversation Here at last—and none too soon—is a resource that delivers the research base, tools, and courage to tackle one of the most challenging and emotionally charged conversations in today’s schools: our inconsistent grading practices and the ways they can inadvertently perpetuate the achievement and opportunity gaps among our students. With Grading for Equity, Joe Feldman cuts to the core of the conversation, revealing how grading practices that are accurate, bias-resistant, and motivational will improve learning, minimize grade inflation, reduce failure rates, and become a lever for creating stronger teacher-student relationships and more caring classrooms. Essential reading for schoolwide and individual book study or for student advocates, Grading for Equity provides A critical historical backdrop, describing how our inherited system of grading was originally set up as a sorting mechanism to provide or deny opportunity, control students, and endorse a “fixed mindset” about students’ academic potential—practices that are still in place a century later A summary of the research on motivation and equitable teaching and learning, establishing a rock-solid foundation and a “true north” orientation toward equitable grading practices Specific grading practices that are more equitable, along with teacher examples, strategies to solve common hiccups and concerns, and evidence of effectiveness Reflection tools for facilitating individual or group engagement and understanding As Joe writes, “Grading practices are a mirror not just for students,
but for us as their teachers.” Each one of us should start by asking, “What do my grading practices say about who I am and what I believe?” Then, let’s make the choice to do things differently . . . with Grading for Equity as a dog-eared reference.

Interactive Homework Workbook Grade. 6 (EnVisionMATH) Scott Foresman 2007-06

The final installment of enVisionMATH, Grade 6, ensures that your child has a solid understanding of fundamental math concepts.

This curriculum for homeschooling features a host of math activities that provide hands-on education for your child. Furthermore, the materials use pictures and graphs to cater to visual learning styles. Whether your child likes to try math problems to better grasp the concepts you teach or use visual aids, enVisionMATH will help him or her excel.

When you select enVisionMATH: Grade 6, you'll get all the tools you need to create dynamic and interesting lesson plans.

This program is organized by math concept. Over time your child will learn to:

- Understand the concept of ratios.
- Multiply and divide using fractions.
- Apply prior math knowledge to rational and irrational numbers.
- Solve algebraic equations that use a single variable.
- Differentiate between dependent and independent variables.
- Solve area equations for 3-D shapes.
- Understand and use absolute value.
- Use graphs to explain distribution.
- Comprehend and use median, mode, range, minimum, maximum and mean.

enVisionMATH: Grade 6 will also further develop your child's problem-solving skills and improve his or her quantitative- and abstract-thinking abilities. The information and skills your child gleans from this curriculum, and the lessons you teach with it, will help him or her in other subject areas as well.

The Grade 6 curriculum transitions smoothly from Grade 5, ensuring your child is ready to move to the next math level. Independent scientific research has proven that the enVisionMATH series is successful in teaching math education. When you use
this set, you know you'll be helping your child achieve his or her learning goals. For more information on the specific materials included in enVisionMATH: Grade 6, visit the Features and Benefits page.

**Investigations**
Stuart A. Kauffman 2002-09-19 "It may be that I have stumbled upon an adequate description of life itself."
These modest yet profound words trumpet an imminent paradigm shift in scientific,
economic, and technological thinking. In the tradition of Schrödinger's classic What Is Life?, Kauffman's Investigations is a tour-de-force exploration of the very essence of life itself, with conclusions that radically undermine the scientific approaches on which modern science rests--the approaches of Newton, Boltzman, Bohr, and Einstein. Building on his pivotal ideas about order and evolution in complex life systems, Kauffman finds that classical science does not take into account that physical systems--such as people in a biosphere--effect their dynamic environments in addition to being affected by them. These systems act on their own behalf as autonomous agents, but what defines them as such? In other words, what is life? Kauffman supplies a novel answer that goes beyond traditional scientific thinking by defining and explaining autonomous agents and work in the contexts of thermodynamics and of information theory. Much of Investigations unpacks the progressively surprising implications of his definition. Significantly, he sets the stages for a technological revolution in the coming decades. Scientists and engineers may soon seek to create autonomous agents--both organic and mechanical--that can not only construct things and work, but also reproduce themselves! Kauffman also lays out a foundation for a new concept of organization, and explores the requirements for the emergence of a general biology that will transcend terrestrial biology to seek laws governing biospheres anywhere in the cosmos. Moreover, he presents four candidate laws to explain how autonomous agents co-create their biosphere and the startling idea of a "co-creating" cosmos. A showcase of Kauffman's most fundamental and significant ideas,
Investigations presents a new way of thinking about the fundamentals of general biology that will change the way we understand life itself--on this planet and anywhere else in the cosmos.
