Genetics - Wikipedia

Genetics is the study of genes, genetic variation, and heredity in organisms. It is an important branch in biology because heredity is vital to organisms' evolution. Gregor Mendel, a Moravian Augustinian friar working in the 19th century in Brno, was the first to study genetics scientifically. Mendel studied "trait inheritance", patterns in the way traits are handed down from parents to ...

May 20, 2022 · Genes are found inside the cells of all living things. They get passed on from parents to offspring. Genes contain instructions for the production of proteins that determine how the body is made and how it functions. Some human traits that are controlled by genes include eye color, hair color, and height.

What is a gene?: MedlinePlus Genetics

Genes are made up of DNA. Some genes act as instructions to make molecules called proteins. However, many genes do not code for proteins. In humans, genes vary in size from a few hundred DNA bases to more than 2 million bases. An international research effort called the Human Genome Project, which worked to determine the sequence of the human genome and identify ...
