Privacy-Invading Technologies and Privacy by Design Demetrius Klitou 2014-07-05 Privacy-invading technologies (PITs) such as Body scanners, Public space CCTV microchips, Public space CCTV loudspeakers and Human-implantable microchips (RFID implants/GPS implants) are dealt with in this book. The book shows how and why laws that regulate the design and development of privacy-invading technologies (PITs) may more effectively ensure the protection of privacy than laws that only regulate data controllers and the use of such technologies. The premise is supported and demonstrated through a discussion on these four specific PITs as case studies. In doing so, the book overall attempts to explain how laws/regulations that mandate the implementation of Privacy by Design (PBD) could potentially serve as a viable approach for collectively safeguarding privacy, liberty and security in the 21st Century. This book will be of interest to academic researchers, law practitioners, policy makers and technology researchers.

Optimizing Digital Solutions for Hyper-Personalization

Books, Bytes and Business

Bill Martin 2016-04-08

How are businesses responding to global changes in markets
driven by changes in technology? Whatever the industry,
the trends are familiar: globalization and the rise of
industrial conglomerates, mergers and acquisitions, the
networking of businesses and markets, outsourcing and
shifts in the distribution of resources and production, and
reflections on the emergence of new products and services and new forms of competition. As
arguably the first knowledge-based business, book
publishing provides an ideal setting for the study of
challenge and opportunity. The industry is currently
experiencing fierce levels of competition, extreme
financial pressures, restructuring and the threat of
technology-induced obsolescence. Added to these are the
challenges posed by new and potential entrants to the
market, the emergence of new products and services, new
ways of doing business, including digital and mobile
markets, and the vulnerability of traditional business
models. The suitability of book publishing as a context
for researching the emergence of knowledge-based
business becomes all too apparent. Through combining
primary research with secondary analysis drawn from the
relevant literatures, Books, Bytes and Business is both
a readable and informative account of business in the
knowledge-based economy.

Taxation in a Global Digital Economy Ina Kerschner 2017-10-04 Time to discuss anti-BEPS measures around digitalization In the course of the BEPS Report on Action 1, it was concluded that there was no instantaneous need for specific rules to address base erosion and profit shifting (BEPS) made possible by the digitalization of enterprises and new digital businesses. At the same time, it was acknowledged that general measures may not suffice with the assessment of results to begin in 2020. While awaiting possible fundamental reforms of the tax framework, it is time to discuss anti-BEPS measures bearing in mind the peculiar features of the digital economy such as increased mobility, no need for physical presence, and dematerialization. The Book focuses on five key areas of interest: International Tax Policy Tax Treaty Law Transfer Pricing Indirect Taxation Issues EU Law "Taxation in a Global Digital Economy" analyses the issues and addresses the five key areas of interest from various viewpoints.
