With over 2,200 drawings and photographs, the book discusses basic theory, preliminary building design guidelines, and detailed design procedure for buildings of all sizes. The updated twelfth edition includes over 300 new illustrations, plus information on the latest design trends, codes, and technologies, while the companion website offers new interactive features including animations, additional case studies, quizzes, and more.

Environmental control systems are the components of a building that keep occupants comfortable and help make the building work. Mechanical and Electrical Equipment for Buildings covers both active controls, like air conditioners and heaters, as well as passive controls like daylighting and natural ventilation. Because these systems comprise the entire energy use and costs of a building's life, the book stresses the importance of sustainability considerations during the design process, by both architects and builders. Authored by two leading green design educators, MEEB provides the most current information on low-energy architecture, including topics like: Context, comfort, and environmental resources Indoor air quality and thermal control Illumination, acoustics, and electricity Fire protection, signal systems, and transportation Occupant comfort and building usability are the most critical factors in the success of a building design, and with environmental concerns mounting, it's becoming more and more important to approach projects from a sustainable perspective from the very beginning. As the definitive guide to environmental control systems for over 75 years, Mechanical and Electrical Equipment for Buildings is a complete resource for students and professionals alike.

Strategy of Firefighting Vincent Dunn 2007
This is a "how to" book written by a "know how" person for anyone who practices firefighting strategy. Deputy Chief Vincent Dunn is passing on to the next generation of firefighters the lessons ("strategy summaries") he learned from his years of firefighting experience. He describes firefighting strategies for the most common types of fire scenarios and identifies specific firefighting problems presented to an incident commander by occupancy and construction type. More importantly, he explains firefighting solutions and offers firefighting plans, standard procedures, action plans, ideas, guidelines, explanations, key steps, and systems of firefighting procedures. This book is not about tactics. It's about strategy - plans of firefighting, logical ways to solve problems at fires.

Monitoring at Chemical Agent Disposal Facilities National Research Council 2005-10-13 Under the direction of the U.S. Army’s Chemical Materials Agency (CMA) and mandated by Congress, the nation is destroying its chemical weapons stockpile. Over the past several years, the Army has requested several studies from the NRC to assist with the stockpile destruction. This study was requested to advise the CMA about the status of analytical instrumentation technology and systems suitable for monitoring airborne chemical warfare agents at chemical weapons disposal and storage facilities. The report presents an assessment of current monitoring systems used for airborne agent detection at CMA facilities and of the applicability and availability of innovative new technologies. It also provides a review of how new regulatory requirements would affect the CMA’s current agent monitoring procedures, and whether new measurement technologies are available and could be effectively incorporated into the CMA’s overall chemical agent monitoring strategies.
