Wireless Cofferdam Alarm System Operation Manual Supervisory of Supervisor of Salvage NAVSEA 00CS 2017-01-31 The wireless cofferdam alarm system was developed to allow Maintenance Activities to monitor cofferdam blanking patch differential pressures. This manual provides information on proper operation and maintenance of the Wireless Cofferdam Alarm System. The majority of the pages are devoted to step-by-step instructions for performing various functions of the system. The manual is organized into ten sections: 1. Introduction, 2. Equipment, 3. Operation, 4. Maintenance, 5. Troubleshooting, 6. Installation, 7. Construction, 8. Calibration, 9. Safety, and 10. Warranty. The manual is designed to provide guidance for users to effectively operate and maintain the Wireless Cofferdam Alarm System. The manual also contains information on the installation and calibration of the system. The manual is focused on providing practical guidance for users to understand and use the Wireless Cofferdam Alarm System.
2005-10-13 Under the direction of the U.S. Army's Chemical Materials Agency (CMA) and mandated by Congress, the nation is destroying its chemical weapons stockpile. Over the past several years, the Army has requested several studies from the NRC to assist with the stockpile destruction. This study was requested to advise the CMA about the status of analytical instrumentation technology and systems suitable for monitoring airborne chemical warfare agents at chemical weapons disposal and storage facilities. The report presents an assessment of current monitoring systems used for airborne agent detection at CMA facilities and of the applicability and availability of innovative new technologies. It also provides a review of how new regulatory requirements would affect the CMA's current agent monitoring procedures, and whether new measurement technologies are available and could be effectively incorporated into the CMA's overall chemical agent monitoring strategies.
