The role of human factors in home health care is critical to improving the quality of care and reducing errors. Human factors research aims to identify the physical, psychological, and social factors that influence the design, execution, and outcomes of care. This includes understanding the capabilities and limitations of human beings, as well as the interaction between humans and technology. The National Research Council has convened a public workshop to explore the evolving role of home health care in supporting aging in place and in helping high-risk, chronically ill, and disabled Americans receive health care in their homes. The workshop brought together a spectrum of public and private stakeholders and thought leaders to discuss the challenges and opportunities lead to the consideration of how home health care fits into the future of health care. The book's recommendations cover the regulation of health care technologies, proper training and education, and the development of innovative practices to improve the quality of home health care. The book also identifies knowledge gaps in the field and how these can be addressed through research and development initiatives. Health Care Comes Home lays the foundation for the integration of human factors with the design and implementation of home health care devices, technologies, and practices. The book describes ways in which the Agency for Healthcare Research and Quality (AHRQ), the U.S. Food and Drug Administration (FDA), and federal housing agencies can collaborate to improve the quality of health care at home. It is also a valuable resource for residential health care providers and caregivers.
