Community Rehabilitation in Neurology Michael P. Barnes 2003-09-04 Rehabilitation should not stop when the disabled person is discharged from hospital, and many neurological patients require ongoing rehabilitation in order to maximize their functional abilities after discharge. This book is intended for the clinician managing the neurologically disabled patient. This book is written from the point of view of patients and staff, and views are drawn from many different perspectives, including the views of disabled people, rehabilitation clinicians and service providers. Many examples of community rehabilitation are described, and the book discusses patients with a wide range of neurological conditions, including those affected by head injuries and strokes. The authors take an international view, and there are chapters dealing with the disabled child in the community and with neuropsychological rehabilitation. This important book examines the growing trend towards community rehabilitation in neurology and is directed both at professionals and laypeople.
