Immigration and Entrepreneurship in the United States
Pierre Azoulay 2020 Immigration can expand labor supply and create greater competition for native-born workers. But immigrants may also start new firms, expanding labor demand. This paper uses U.S. administrative data and other data resources to study the role of immigrants in entrepreneurship. We ask how often immigrants start companies, how many jobs these firms create, and how these firms compare with those founded by U.S.-born individuals. A simple model provides a measurement framework for addressing the dual roles of immigrants as founders and workers. The findings suggest that immigrants act more as "job creators" than "job takers" and that non-U.S. born founders play outsized roles in U.S. high-growth entrepreneurship.

Immigrant Integration
Kenise Murphy Kilbride 2014 Thorough and relevant, this book includes the research of academics, policymakers, and experts from a wide range of disciplines, including sociology, immigration and settlement, public policy, social work, and geography. With a sense of urgency, these essays illustrate the existing and developing strains that Canadian public policy has created and will continue to create unless built upon the evidence of current research has produced.--pub. desc.

Migration to Switzerland
Dominique M. Gross 2012 From less than 5 percent in 1980, the share of residents from the former Republic of Yugoslavia in the total foreign population in Switzerland rose to almost 25% in 2000, to become one of the largest foreign communities. The largest increase occurs mostly between 1985 and 1998 and represents a unique development in the composition of immigration to Switzerland, as it coincides with a new policy, which from 1995 gives priority to workers from the European Union for new permits and severely restricts work permits for migrants from the rest of the world. The empirical analysis shows that when there is no discriminatory treatment by immigration policy, immigrant workers from the former Yugoslavia respond to financial and cultural incentives in the same way as their unskilled counterparts from Southern European countries. The restriction on permit availability in the mid-1990s appears to have weakened the financial and cultural attractiveness of Switzerland for immigrants from the former Yugoslavia. This may signal a change in the characteristics of migrants from the region toward higher skill levels.

The New Americans
National Research Council 1997-11-14 This book sheds light on one of the most controversial issues of the decade. It identifies the economic gains and losses from immigration--for the nation, states, and local areas--and provides a foundation for public discussion and policymaking. Three key questions are explored: What is the influence of immigration on the overall economy, especially national and regional labor markets? What are the overall effects of immigration on federal, state, and local government budgets? What effects will immigration have on the future size and makeup of the nation's population over the next 50 years? The New Americans examines what immigrants gain by coming to the United States and what they contribute to the country, the skills of immigrants and those of native-born Americans, the experiences of immigrant women and other groups, and much more. It offers examples of how to measure the impact of immigration on government revenues and expenditures--estimating one year's fiscal impact in California, New Jersey, and the United States and projecting the long-run fiscal effects on government revenues and expenditures. Also included is background information on immigration policies and practices and data on where immigrants come from, what they do in America, and how they will change the nation's social fabric in the decades to come.

Statistics on U.S. Immigration
National Research Council 1996-07-27 The growing importance of immigration in the United States today prompted this examination of the adequacy of U.S. immigration data. This volume summarizes data needs in four areas: immigration trends, assimilation and impacts, labor force issues, and family and social networks. It includes recommendations on additional sources for the data needed for program and research purposes, and new questions and refinements of questions within existing data sources to improve the understanding of immigration and immigrant trends.

Immigration
Eugene Tartakovsky 2013-01-01 This collected volume presents immigration research from an interdisciplinary perspective. It includes chapters written by psychologists, sociologists, anthropologists, economists, educators, and lawyers. The books chapters focus on both immigrants and the host societies, reflecting different narratives of immigration. The studies presented in the book use a wide array of methodologies: quantitative and qualitative research, longitudinal studies, and analyses of macro-level data. They also provide a broad time perspective on immigration processes that span from the pre-migration period, and include second and third generation immigrants. Finally, the book includes studies conducted in different parts of the world: in Australasia, Eastern and Western Europe, the Middle East, and both Americas.

Immigration Economics
George J. Borjas 2014-06-09 Nearly 3% of the world's population no longer live in the country where they were born. George Borjas synthesizes the theories, models, and econometric methods used to identify the causes and consequences of international labor flows, and lays out with clarity a full spectrum of topics with crucial implications for framing debates over immigration.

Economic Research on the Determinants of Immigration
George J. Borjas 1999-01-01 This publication summarizes some of the key research findings from current literature and applies the lessons from it to the potential migration problem faced by countries in the EU. Its main objective is to present a review of existing economic theory and empirical evidence to evaluate the likelihood of migration flows from acceding or neighboring countries toward the current EU member states. This publication is a Technical Paper sponsored by the Poverty Reduction and Economic Management Network of the World Bank's Europe and Central Asia Division. It is part of a comprehensive series regarding the many important factors that influence European Union (EU) accession in the Central and East European countries (CEEC). The topics in the series cover both the social and economic aspects of accession.
across a broad range of sectors. The series also provides background information for specific acceding countries. These publications will be of interest to EU member and candidate countries, their ministries, and any one studying the accession issue.

Black Identities Mary C. WATERS 2009-06-30 The story of West Indian immigrants to the United States is generally considered to be a great success. Mary Waters, however, tells a very different story. She finds that the values that gain first-generation immigrants initial success--a willingness to work hard, a lack of attention to racism, a desire for education, an incentive to save--are undermined by the realities of life and race relations in the United States. Contrary to long-held beliefs, Waters finds, those who resist Americanization are most likely to succeed economically, especially in the second generation.

Immigration as a Social Determinant of Health National Academies of Sciences, Engineering, and Medicine 2019-01-28 Since 1965 the foreign-born population of the United States has swelled from 9.6 million or 5 percent of the population to 45 million or 14 percent in 2015. Today, about one-quarter of the U.S. population consists of immigrants or the children of immigrants. Given the sizable representation of immigrants in the U.S. population, their health is a major influence on the health of the population as a whole. On average, immigrants are healthier than native-born Americans. Yet, immigrants also are subject to the systematic marginalization and discrimination that often lead to the creation of health disparities. To explore the link between immigration and health disparities, the Roundtable on the Promotion of Health Equity held a workshop in Oakland, California, on November 28, 2017. This summary of that workshop highlights the presentations and discussions of the workshop.

Qualitative Research in European Migration Studies Ricard Zapata-Barrero 2018-06-19 This open access book covers the main issues, challenges and techniques concerning the application of qualitative methodology to the study of migration. It discusses theoretical, epistemological and empirical questions that must be considered before, during, and after undertaking qualitative research in migration studies. It also covers recent innovative developments and addresses the key issues and major challenges that qualitative migration research may face at different stages i.e. crafting the research questions, defining approaches, developing concepts and theoretical frameworks, mapping categories, selecting cases, dealing with concerns of self-reflection, collecting and processing empirical evidence through various techniques, including visual data, dealing with ethical issues, and developing policy-research dialogues. Each chapter discusses relative strengths and limitations of qualitative research. The chapters also identify the main drivers for qualitative research development in migration studies. It is a unique volume as it brings together a multidisciplinary perspective as well as illustrations of different issues derived from the research experience of the recognized authors. One additional value of this book is its geographic focus on Europe. It seeks to explore theoretical and methodological issues that are raised by distinctive features of the European context. This volume will be a useful reference source for scholars and professionals in migration studies and in social sciences as well. The publication is also addressed to graduate and post-graduate students and, more generally, to those who embark on the task of doing qualitative research for the first time in the field of migration.

The The most common arguments against immigration and why they're wrong

Alex Nowrasteh 2021-06-16 "Immigrants and amnesty jobs." "They won't learn English." "We've heard it all. The most common arguments against immigration and why they're wrong contains the 15 most common arguments against immigration and Cato Institute scholar Alex Nowrasteh's responses to them.

Immigration has been the most hotly debated public policy issue in the United States since Donald Trump entered the Republican primary in mid-2015. A new Biden Administration has an opportunity to reverse the anti-immigration actions of the Trump Administration and expand legal immigration. From economics to crime, terrorism, and national security, a long list of arguments are made to explain the disadvantages that unauthorized immigrants bring. Nowrasteh considers the most common arguments against immigration and rejection of these myths using sound reasoning and evidence.

Parents Without Papers
Frank D. Bean 2015-10-01 For several decades, Mexican immigrants in the United States have outnumbered those from any other country. Though the economy increasingly needs their labor, many remain unauthorized. In Parents Without Papers, immigration scholars Frank D. Bean, Susan K. Brown, and James D. Bachmeier document the extent to which the outsider status of these newcomers affects multiple hardships on their children and grandchildren.

Parents Without Papers provides both a general conceptualization of immigrant integration and an in-depth examination of the Mexican American case. The authors draw upon unique retrospective data to shed light on three generations of integration. They show in particular that the "membership exclusion" experienced by unauthorized Mexican immigrants—that is, their fear of deportation, lack of civil rights, and poor access to good jobs—hinders the education of their children, even those who are U.S.-born. Moreover, they find that children are hampered not by the unauthorized entry of parents itself but rather by the long-term inability of parents, especially mothers, to acquire green cards. When unauthorized parents attain legal status, the disadvantages of the second generation begin to disappear. These second-generation men and women achieve schooling on par with those whose parents come legally. By the third generation, socioeconomic levels for women equal or surpass those of native white women. But men reach parity only through greater labor-force participation and longer working hours, results consistent with the idea that their integration is delayed by working-class imperatives to support their families rather than attend college. An innovative analysis of the transmission of advantage and disadvantage among Mexican immigrants, Parents Without Papers presents a powerful case for immigration policy reforms that provide not only realistic levels of legal less-skilled migration but also attainable pathways to legalization. Such measures, combined with affordable access to college, are more important than ever for the integration of vulnerable Mexican immigrants and their descendants.

The Problems of Immigration and Assimilation in a Multicultural Society
Tamara Schaub 2008-01-Seminar paper from the year 2005 in the subject American Studies - Culture and Applied Geography, grade: 2.0, University of Mannheim (Americanistik), course: A survey of contemporary America, 7 entries in the bibliography, language: English, abstract: The USA is sometimes called "land of the immigrants" or "the promised land." In early times immigrants from different origins and nationalities immigrated to the USA. That's why the USA developed to a multicultural society. There is the great idea of all people from different nations living together. America is designates as a "melting pot." This term tries to describe the assimilation of immigrants into American life. Its literal meaning is a chemical one: several different elements melted together to form a new product. The idea was that immigrants would fuse together with the "old" Americans, giving up their old lifestyles and cultures to form one American nation. The motto " e pluribus unum" which still appears on American coins today, has been used since 1782, reflecting how even the early Americans saw their country. But does a multicultural society system like this really work? That's the main point I will try to work out in my research paper. To get through this topic it needs to be defined very clearly what immigrations means in general and to describe briefly the immigration process from the early times till nowadays. This should be explained with some facts and figures to build the foundation of the following analysis. I will also show the reasons and problems of illegal immigration which is an important topic in the American society. That brings us to the next point the Hispanic Americans, which representativ for American immigrants. I will use The Hispanic Americans as an example to mark the assimilation problem of immigrants in the USA. Furthermore you can use this group of immigrants to explain the multicultural situation in the USA today. I will round off my work with the part of the conclusion and I.

World Migration Report 2020
United Nations 2019-11-27 Since 2000, IOM has been producing world migration reports. The World Migration Report 2020, the tenth in the world migration report series, has been produced to contribute to increased understanding of migration throughout the world. This new edition presents key data and information on migration as well as thematic chapters on highly topical migration issues, and is structured to focus on two key contributions for readers: Part I: key information on migration and migrants (including migration-related statistics); and Part II: a balanced evidence-based analysis of complex and emerging migration issues.

Foundational Essays in Immigration Economics
George J. Borjas 2021-10-04 The Association of Southeast Asian Nations (ASEAN) has been one of the world's most dynamic and fastest-growing regions over the years. Its average combined GDP growth rate is 5.4% per annum, and its average combined GDP per capita is 31.0% of the world average. But this is not enough if we want to compete with the US.
more than 6% and the total combined GDP was valued at US$3.0 trillion in 2018. ASEAN countries have managed to significantly reduce their national poverty over the last few decades. Although a correlation exists between economic growth and poverty reduction, millions of people in ASEAN countries still do not have sufficient incomes to fulfill their basic needs including food, shelter, clothes and sanitation. This book is a collection of working group papers contributed by members of Network of ASEAN-China Think-tanks (NACT) and covers best practices on poverty alleviation in ASEAN member states as well as in China, and ASEAN-China cooperation. It discusses experiences of ASEAN member states and China such as with regard to national policies, principles, definitions, approaches, progress, and challenges in poverty reduction. It reviews and evaluates the way forward including existing joint projects, opportunities, and challenges in the future cooperation and offers policy recommendations from both national and regional perspectives to help policymakers better cope with the daunting poverty challenges.

*Of Love and Papers* Laura E. Enriquez 2020-04-28 A free open access ebook is available upon publication. Learn more at www.luminoso.org. Of Love and Papers explores how immigration policies are fundamentally reshaping Latino families. Drawing on two waves of interviews with undocumented young adults, Enriquez investigates how immigration status creeps into the most personal aspects of everyday life, intersecting with gender to constrain family formation. The imprint of illegality remains, even upon obtaining DACA or permanent residency. Interweaving the perspectives of US citizen romantic partners and children, Enriquez illustrates the multigenerational punishment that limits the upward mobility of Latino families. Of Love and Papers sparks an intimate understanding of contemporary US immigration policies and their enduring consequences for immigrant families.

**The Economic and Fiscal Consequences of Immigration**

National Academies of Sciences, Engineering, and Medicine 2017-07-13 The Economic and Fiscal Consequences of Immigration finds that the long-term impact of immigration on the wages and employment of native-born workers overall is very small, and that any negative impacts are most likely to be found for prior immigrants or native-born high school dropouts. First-generation immigrants are more costly to governments than are the native-born, but the second generation are among the strongest fiscal and economic contributors in the U.S. This report concludes that immigration has an overall positive impact on long-run economic growth in the U.S. More than 40 million people living in the United States were born in other countries, and almost an equal number have at least one foreign-born parent. Together, the first generation (foreign-born) and second generation (children of the foreign-born) comprise almost one in four Americans. It comes as little surprise, then, that many U.S. residents view immigration as a major policy issue facing the nation. Not only does immigration affect the environment in which everyone lives, learns, and works, but it also interacts with nearly every policy area of concern, from jobs and the economy, education, and health care, to federal, state, and local government budgets. The changing patterns of immigration and the evolving consequences for American society, institutions, and the economy continue to fuel public policy debate that plays out at the national, state, and local levels. The Economic and Fiscal Consequences of Immigration assesses the impact of dynamic immigration processes on economic and fiscal outcomes for the United States, a major destination of world population movements. This report will be a fundamental resource for policy makers and law makers at the federal, state, and local levels but extends to the general public, nongovernmental organizations, the business community, educational institutions, and the research community.

The academic discourse about new Asian immigrants in New Zealand David Gloskey 2004-01-03 Seminar paper from the year 2002 in the subject English Language and Literature Studies - Culture and Applied Geography, grade: 1,7 (A-), Victoria University of Wellington (Robert Stout Research Centre), course: Contemporary New Zealand, 10 entries in the bibliography, language: English, abstract: Until the end of the 1980s, New Zealand’s experience with immigrants from Asia was limited in two ways: Firstly, the New Zealand Asian population was rather homogenous and practically limited to mainland Chinese and Indians, who recruited the two visible Asian communities in the country. Regarding ethnic origin, the 1986 census still divided the New Zealand population into European (2,651,376), New Zealand Maori (295,317), several Pacific Island Polynesian origins (total 94,656), Chinese (19,506), Indian (12,126) and ‘other’ (14,487). Secondly, the Asian population was disappearingly small. Since the arrival of the first Chinese and Indian immigrants in the 19th century, their proportion to/with the total population had only grown very little, from 0.3 % in 1945, over 0.7 % in 1966 to 1.0 % in 1986. Changed immigration rules led to a far broader influx of Asian immigrants from 1987 onwards. The fourth Labour government had initiated the first ele mentary recast of immigration policy since 1961. In the 1986 White Paper, which set out the policy of the 1987 Immigration Act, there was no reference to traditional links with Britain – a novelty since the foundation of New Zealand. Its main objective was to ‘select new settlers principally on the strength of their potential personal contribution to the future well-being of New Zealand.’ In the same year, the Business Immigration Policy (BIP) was introduced. Many Asian immigrants took the opportunity under the general and business categories. In 1991 the newly elected National government substituted the general category with a points system. Under the new 1991 system, the business immigration numbers dropped sharply, and the points system became even more important. 2 Whereas Asian immigrants had comprised under 20 % of the total immigration numbers until 1986, this figure rose to well above 50 % after 1991. The main sources of Asian immigration were no longer China and India, but mainly Taiwan, Hong Kong, South Korea, Malaysia, also Thailand, Singapore, the Philippines, Sri Lanka and Japan. The traditional New Zealand conception of who Asian immigrants were, was no longer applicable. The change faced New Zealand academics with a challenge, when they were writing about Asian immigration after 1986. This essay examines the academic discourse about new Asian immigrants in the years 1995 and 1996. It focuses on a selection of three texts from Manying Ip (1995), Ravi Arvind Palat (1996) and Malcolm McKinnon (1996)... Moving for Prosperity: Global Migration and Labor Markets The World Bank
