Eager to Learn by Education. National Research Council 2001-01-22 Clearly babies come into the world remarkably receptive to its sounds, and their attention is drawn to them. But, does that mean they are actually learning to process the sounds they hear? No. The next three years is a critical period during which the child establishes the foundations for language and literacy development. During this period, a range of factors come together to influence the child's learning and development. The book documents how very early in life learning really begins. Valuable conclusions and recommendations are presented in areas of the teacher-child relationship, the organization and content of curriculum, meeting the needs of those children most at risk of school failure, teacher preparation, assessment of learning and teacher education. Physical, social and emotional development are emphasized as key ingredients that affect the child's overall development. The book also highlights the need for a national agenda that would provide the conditions necessary for all young children to have a high quality early childhood learning, along with a clear path toward improving this important stage of life for all children.
