Developing Intelligent Agent Systems Lin Padgham 2005-06-24 Build your own intelligent agent system... Intelligent agent technology is a tool of modern computer science that can be used to engineer complex computer programmes that behave rationally in dynamic and changing environments. Applications range from small programmes that intelligently search the Web buying and selling goods via electronic commerce to large-scale military applications. The design of such systems is a difficult problem. Factors to be considered include the representation of the knowledge the agent has, how this knowledge is to be used, and the development of intelligent agent software requires high levels of training and skill. The authors of this book have developed and tested a methodology and tools for developing intelligent agent systems. With this methodology (Prometheus) developers can start agent-oriented designs and implementations easily from scratch saving valuable time and resources. Developing Intelligent Agent Systems not only answers the questions “what are agents?” and “why are they useful?” but also the crucial question: “how do I design and build intelligent agent systems?” The book covers everything a practitioner needs to know to begin to effectively use this technology - including an introduction to the notion of agents, a description of the concepts involved, and a software engineering methodology. Read on for: a practical step-by-step introduction to designing and building intelligent agent systems. a full life-cycle methodology for developing intelligent agent systems covering specification, analysis, design and implementation of agents. PDT: Prometheus Design Tool – software support for the Prometheus design process, the example of an electronic bookstore to illustrate the design process throughout the book. Electronic resources including the Prometheus Design Tool (PDT), can be found at: http://www.cs.rmit.edu.au/agents/prometheus This book is aimed at industrial software developers, software engineers and at advanced undergraduate students. It assumes knowledge of basic software engineering but does not require knowledge of Artificial Intelligence or of mathematics. Familiarity with Java will help in reading the examples in chapter 10.

Death Waits in the Dark Mark Edward Langley 2020-08-04 It took all of thirty seconds for two shots to bring the world of Margaret Tabaaha crashing down around her. After losing her husband in Afghanistan during the first year of Operation Enduring Freedom, her two sons were all she had left. Now they had been taken from her violently, deliberately, plunging her into a whiskey bottle and stripping away her reason for living. When Arthur Nakai receives a call from his first love, Margaret, her voice pleading for his help, it comes as he is attending a wake for one of the men he considered a brother from his days in the Marines 6th LAR Wolf Pack Battalion. Feeling a deep and responsible obligation to help her, Arthur soon finds himself involved in the multi-billion-dollar world of the oil and gas industry and coming face-to-face with an old adversary, Elias Dayton. Their paths had crossed when Arthur was a member of the Shadow Wolves, an elite tactical unit within US Customs and Border Protection. Now Dayton runs Patriot Security, a Blackwater-type firm that keeps the oil rigs, gas wells, and man camps secure from the Water Protectors, protesters pushing to stop the fracking and poisoning of Native lands. As Arthur works through the case from his end, Navajo police officers bravely tackle it from another angle, looking into the strained relationship between the oil company and the Navajo people, all while searching for a missing Navajo man that may have become an unwilling piece on the reservation checkerboard. But when Arthur learns the identity of the boys’ killer, he struggles to make sense of it. Because if the clues are right, he will be forced to make a decision that will haunt him for the rest of his life.

Ecology of Riparian Forests in Japan Hitosako Sakio 2008-08-25 Riparian forests along streams and rivers are diverse in species, structure, and regeneration processes, and have important ecological functions in maintaining landscape and biodiversity. This book discusses riparian forests from subpolar to warm-temperate zones, covering headwater streams, braided rivers on alluvial fans, and low-gradient meandering rivers. It presents the dynamics and mechanisms that govern the coexistence of riparian tree species, tree demography, the response to water stress of trees, and the conservation of endangered species, and focuses on natural disturbances, life-history strategies, and the ecophysiology of trees. Because many riparian landscapes have been degraded and are disappearing at an alarming rate, the regeneration of the remaining riparian ecosystems is urgent. With contributions by more than 20 experts in diverse fields, this book offers useful information for the conservation, restoration, and rehabilitation of riparian ecosystems that remain in world streams and rivers.

Evidence-based Care for Normal Labour and Birth Denis Walsh 2007-04-19 Evidence-based care is a well established principle in contemporary healthcare and a world wide health care movement. However, despite the emphasis on promoting evidence-based or effective care without the unnecessary use of technologies and drugs, intervention rates in childbirth are rising rapidly. Evidence-based Care for Normal Labour and Birth brings to light much of the evidence around what works best for normal birth, what has, until now, remained largely hidden and ignored by maternity care professionals. Beginning with the decision about where to have a baby, through all the phases of labour to the immediate post-birth period, it systematically details research and other evidence sources that endorse a low intervention approach. The book: highlights where the evidence is compelling discusses its application where women question its relevance to them and where the practitioner's expertise leads them to challenge it gives background and context before discussing the research to date includes questions for reflection and practice recommendations generated from the evidence. Using research data, Evidence-based Care for Normal Labour and Birth critiques institutionalised, scientifically managed birth and endorses a more humane midwifery-led model. Packed with up-to-date and relevant information, this controversial book will help all students, practising midwives and doulas keep abreast of the evidence surrounding normal birth and ensure their practice takes full advantage of it.

To My Arrogant Boss J. S. Cooper 2021-01-01 To Mr. Tate Howard, You are quite possibly the most infuriating, annoying and grumpy man I’ve ever met in my life. I know you think that you’re God’s gift to women, but I have a secret to let you in on: you’re not. You’re God’s gift to yourself. Get over your wanna-be cool surfer and grow up. I thought it was time that someone addressed your big head and told you straight to your face that you’re not all that. Just because you have an Ivy league education doesn’t mean you’re the smartest man in the world. In fact, I’m not even sure if you would have gotten in if you didn’t have rich parents. Yes, I went there. Every woman doesn’t want to sleep with you and I’m sure you’re not even good in bed. And I’m someone that would know. From, Your Secret Not Admirer

Engineering Geology for Society and Territory - Volume 4 Giorgio Lollino 2014-08-12 This book is one out of 8 IAEG XII Congress volumes, and deals with the processes occurring on the coastal zone, which represents a critical interface between land and sea, as the contribution of the ocean to the provision of energy and mineral resources will likely increase in the coming decades. Several related topics fit into this volume, such as: coastal developments and infrastructures; dredging and beach re-nourishment; sediment erosion, transport and accumulation; geohazard assessment; seafloor uses; seabed mapping; exploration and exploitation of the seafloor, of the sub-seafloor, and of marine clean energies and climatic and anthropogenic impacts on coastal and marine environments. Examples of specific themes are coastal management and shore protection, taking into account storms, related events and natural and anthropogenic changes in the relative sea level, planning of waste disposal, remedial works for coastal pollution, seafloor pipeline engineering, slope stability analysis, or tsunami propagation and flooding. The Engineering Geology for Society and Territory volumes of the IAEG XII Congress held in Torino from September 15-19, 2014, analyze the dynamic role of engineering geology in our changing world and build on the four main themes of the congress: environment, processes, issues and approaches. The congress topics and subject areas of the
