The book begins with an integrated review of Keynesian and monetarist approaches and introduces the main elements of the intertemporal approach through a series of two-period competitive general equilibrium models—the foundations of modern macroeconomics. It examines a number of models, each of which is suitable for investigating specific issues but may be unsuitable for others. After presenting a treatment of modern macroeconomics, presented through a sequence of dynamic general equilibrium models based on intertemporal household choices and macroeconomic outcomes; equilibrium asset returns, prices, and bubbles; labor supply, growth, and business cycles; and open-economy issues.
