Wage Inequality in Latin America Julián Messina 2017-12-28 What caused the decline in wage inequality of the 2000s in Latin America? Looking to the future, will the current economic slowdown be regressive? Wage Inequality in Latin America: Understanding the Past to Prepare for the Future addresses these two questions by reviewing relevant literature and providing new evidence on what we know from the conceptual, empirical, and policy perspectives. The answer to the first question can be broken down into several parts, although the bottom line is that the changes in wage inequality resulted from a combination of three forces: (a) education expansion and its effect on falling returns to skill (the supply-side story); (b) shifts in aggregate domestic demand; and (c) exchange rate appreciation from the commodity boom and the associated shift to the nontradable sector that changed interfirm wage differences. Other forces had a non-negligible but secondary role in some countries, while they were not present in others. These include the rapid increase of the minimum wage and a rapid trend toward formalization of employment, which played a supporting role but only during the boom. Understanding the forces behind recent trends also helps to shed light on the second question. The analysis in this volume suggests that the economic slowdown is putting the brakes on the reduction of inequality in Latin America and will likely continue to do so—but it might not actually reverse the region's movement toward less wage inequality.

Righteous Porkchop Nicolette Hahn Niman 2010-10-19 Asked to head up Robert F. Kennedy Jr.'s environmental organization's "hog campaign," Nicolette Hahn Niman embarked upon a fascinating odyssey through the inner workings of the "factory farm" industry. What she discovered transformed her into an intrepid environmental lawyer determined to lock horns with the big business farming establishment. She even, unexpectedly, found love along the way. A searing account of an industry gone awry and one woman's passionate fight to remedy it, *Righteous Porkchop* chronicles Niman's investigation and her determination to organize a national reform movement to fight the shocking practices of industrial animal operations. She offers necessary alternatives, showing how livestock farming can be done in a better way—and she details both why and how to choose meat, poultry, dairy, eggs, and fish from traditionally farmed sources.

Energy Pardeep Singh 2021-09-06 Energy Global energy demand has more than doubled since 1970. The use of energy is strongly related to almost every conceivable aspect of development: wealth, health, nutrition, water, infrastructure, education and even life expectancy itself are strongly and significantly related to the consumption of energy per capita. Many development indicators are strongly related to per-capita energy consumption. Fossil fuel is the most conventional source of energy but also increases greenhouse gas emissions. The economic development of many countries has come at the cost of the environment. However, it should not be presumed that a reconciliation of the two is not possible. The nexus concept is the interconnection between the resource energy, water, food, land, and climate. Such interconnections enable us to address trade-offs and seek synergies among them. Energy, water, food, land, and climate are essential resources of our natural environment and support our quality of life. Competition between these resources is increasing globally and is exacerbated by climate change. Improving resilience and securing resource availability would require improving resource efficiency. Many policies and programs are announced nationally and internationally for replacing the conventional mode and also emphasizing on conservation of fossil fuels and reuse of exhausted energy, so a gap in implications and outcomes can be broadly traced by comparing the data. This book aims to highlight problems and solutions related to conventional energy utilization, formation, and multitudes of ecological impacts and tools for the conservation of fossil fuels. The book also discusses modern energy services as one of the sustainable development goals and how the pressure on resource energy disturbs the natural flows. The recent advances in alternative energy sources and their possible future growth are discussed and on how conventional energy leads to greenhouse gas formation, which reduces energy use efficiency. The different policies and models operating is also addressed, and the gaps that remained between them. Climate change poses a challenge for renewable energy, and thus it is essential to identify the factors that would reduce the possibility of relying on sustainable energy sources. This book will be of interest to researchers and stakeholders, students, industries, NGOs, and governmental agencies directly or indirectly associated with energy research.

Foundation Engineering Handbook Hsai-Yang Fang 2013-06-29 More than ten years have passed since the first edition was published. During that period there have been a substantial number of changes in geotechnical engineering, especially in the applications of foundation engineering. As the world population increases, more land is needed and many soil deposits previously deemed unsuitable for residential housing or other construction projects are now being used. Such areas include problematic soil regions, mining subsidence areas, and sanitary landfills. To overcome the problems associated with these natural or man-made soil deposits, new and improved methods of analysis, design, and implementation are needed in foundation construction. As society develops and living standards rise, tall buildings, transportation facilities, and industrial complexes are increasingly being built. Because of the heavy design loads and the complicated environments, the traditional design concepts, construction materials, methods, and equipment also need improvement. Further, recent energy and material shortages have caused additional burdens on the engineering profession and brought about the need to seek alternative or cost-saving methods for foundation design and construction.

Sharing Success - Owning Failure: Preparing to Command in the Twenty-First Century Air Force Colonel Usaf David L Goldfein 2012-08-17 Command is the ultimate service. It is a time when we have the singular responsibility to create and lead strong Air Force units. A time when our passion for our Air Force and our vision for its future must be overwhelmingly clear. Early in the "Developing Aerospace Leaders" initiative, we began to focus on the way in which the institution teaches leadership and prepares airmen for command. What we found was a wide range of practices and a wide range of expectations - a complicating factor in today's Expeditionary Aerospace Force. We realize that preparing our officers to command effective, mission-oriented units must be a deliberate process. It must develop our unique airman perspective, creating commanders who are able to communicate the vision, have credibility in the mission area, and can lead our people with inspiration and heart. The foundation of our institution's effectiveness has always been its leaders. Colonel Goldfein's work provides valuable lessons learned and serves as a worthwhile tool to optimize your effectiveness as a squadron commander. This book is a must-read, not only for those selected to command a squadron but for all our young officers, helping them understand what the requirements of squadron command will be. Remember, command is a unique privilege - a demanding and crucial position in our Air Force. "Sharing Success - Owning Failure" takes you a step closer to successfully meeting that challenge.

Henri Cartier-Bresson, Interviews and Conversations, 1951-1998 Henri Cartier-Bresson 2017 Presented for the first time in English, this volume brings together twelve notable interviews and conversations with Henri Cartier-Bresson carried out between 1951 and 1998. While many of us are acquainted with his images, there are so few texts available by Cartier-Bresson on his photographic process. These verbal, primary accounts capture the spirit of the master photographer and serve as a lasting document of his life and work, which has inspired generations of photographers and artists. Here, Cartier-Bresson speaks passionately, with metaphors and similes, about the world and photography. A man of principles shaped by the evolving eras of the twentieth century, his major influences included Surrealism, European politics of the 1930s and '40s, the Second World War, and his experiences with Magnum as cofounder and reporter. This book illuminates his thoughts, personality, and reflections on a seminal career. In his own words: [Photography] is a way of questioning the world and questioning yourself at the same time. . . . It entails a discipline. For me, freedom is a basic frame of reference, and inside that frame are all the possible variations. Everything, everything, everything. But it is within a frame. The important thing is the sense of limit. And visually, it is the sense of form. Form is important. The structure of things. The space.

Natural Products and Their Active Compounds on Disease Prevention M. Mohamed Essa 2012 It is well documented that most natural products are enriched with bio-active components that have protective action. There is currently a growing body of evidence that supplementing the human diet with natural products is of major benefit for human health and well-being. Nowadays, the use of complementary/alternative medicine, functional food and especially the consumption of natural products have been increasing rapidly world-wide, mostly because of the supposedly less

frequent side effects. Both in conventional and traditional medicines, natural products continue to provide valuable therapeutic agents. The issues regarding the efficacy and safety of currently available modern medicine agents have prompted the search for safer and more effective alternatives. This book focuses on implications of traditional and processed foods for health and disease prevention.
