developments and shopping centers. Based on an extended period of research in two local steel factories, this book combines a lively, descriptive account with a wide-ranging critique of post-industrial capitalism. Its central argument is that recent government attempts to engineer Britain's transition to a post-industrial and classless society have instead created volatile post-industrial spaces marked by informal labor, industrial sweatshops and levels of risk and deprivation that divide citizens along lines of gender, age, and class. The author discovers a link between production and reproduction, and demonstrates the centrality of kinship relations, child and female labor, and intra-household exchanges to the economic process of de-industrialization. Paradoxically, government policies have reinvigorated working-class militancy, spawned local industrial clusters and re-embedded the economy in the spatial and social structure of the neighborhood.
