David Vizard's How to Build Horsepower

David Vizard 2010

Extracting maximum torque and horsepower from engines is an art as well as a science. David Vizard is an engineer and more aptly an engine building artist who guides the reader through all the aspects of power production and high-performance engine building. His proven high-performance engine building methods and techniques are revealed in this all-new edition of How to Build Horsepower. Vizard goes into extreme depth and detail for drawing maximum performance from any automotive engine. The production of power is covered from the most logical point from the air entering the engine all the way to spent gasses leaving through the exhaust.

Explained is how to optimize all the components in between, such as selecting heads for maximum flow or port heads for superior power output, ideal valvetrain components, realizing the ideal rocker arm ratios for a particular application, secrets for selecting the best cam, and giving unique insight into all facets of cam performance. In addition, he covers how to select and setup superchargers, nitrous oxide, ignition and other vital aspects of high-performance engine building.

Modern Engine Tuning
Graham Bell 2002-04-01
First published in 1989 as Tuning New Generation Engines, this best-selling book has been fully updated to include the latest developments in four-stroke engine technology in the era of pollution controls, unleaded and low-lead petrol, and electronic management systems. It explains in non-technical language how modern engines can be modified for road and club competition use, with the emphasis on power and economy, and how electronic management systems and emission controls work.

Automotive Machining
Machining is an essential part of high-performance engine building and stock rebuilding, as well as certain servicing procedures. Although you may not own the expensive tooling and machining to perform all or any of the machining required for a quality build, you need to understand the principles, procedures, and goals for machining, so you can guide the machining process when outsourced. Classic and older engines typically require extensive machining and almost every major component of engine, including block, heads, intake, crankshaft, and pistons, require some sort of machining and fitment. A detailed, authoritative, and thorough automotive engine-machining guide for the hard-core enthusiast has not been available until now. Mike Mavrigian, editor of Engine Building Professional, walks you through each important machining procedure. A stock 300-hp engine build has far different requirements than a 1,000-hp drag race engine, and Mavrigian reveals the different machining procedures and plans according to application and engine design. The author also shows you how to inspect, measure, and evaluate components so you can provide astute guidance and make the best machine work choices. Machining procedures included are cylinder boring, align boring/honing, decking, valveseat cutting, cam tunnel boring, and a multitude of other services. In addition, multi-angle valve jobs, setting the valveseats, altering rocker arm ratio, re-conditioning connecting rods, and machining and matching valvetrain components are also covered. Whether you're an enthusiast engine builder or prospective machining student who wants to pursue a career as an automotive machinist, this book will provide insight...
and in-depth instruction for performing the most common and important machining procedures. **Chevrolet Corvette, 1968-1982** John Haynes 1999-07-30 Haynes disassembles every subject vehicle and documents every step with thorough instructions and clear photos. Mercedes-Benz G-Wagen

Nik Greene 2020-04-14

Codenamed W460, the iconic Mercedes-Benz G-Wagen, with its boxy, square edged no frills look, set out to be Stuttgart’s answer to the Range Rover. However, by going back to Gottlieb Daimler’s premise of "Nothing but the best," it quickly took its place throughout the world as "The Best 4X4." This Essential Buyer’s Guide will navigate you through the various model changes, starting from the simple hand-built W460, through to the more luxurious market of the W463. You will find details of model changes, engine specifications, and
issues that you may come across when looking to buying one of the best purpose-made vehicles around. Nik Greene has written many feature articles and regular copy for popular classic car and club magazines in the UK and France, and his passion for Mercedes cars has steered him towards researching and writing for one of the elite motor manufacturers. Having restored many cars, his present stable of cars includes the Mercedes W126 S-Class 560SE and his beloved Mercedes G-Wagen, as well as several classic Citroens and Renaults.
