Popular Science 1975-09 Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better. The Bluejackets’ Manual Bill Beardon 1993 Containing information on the US Navy's customs and ceremonies, this new edition includes details of the recent technological advances in today's Navy. The book has sections covering weapons, ships, uniforms and the code of military justice.

Parenthood Dalton Conley 2014-03-18 An award-winning scientist offers his unorthodox approach to childrearing: "Parenthood is brilliant, jaw-droppingly complex, and full of wisdom... Bound to change your thinking about parenting and its consequences" (Chua, author of Battle Hymn of the Tiger Mother). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on tradition or cultural practices. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, turned to scientific research to make the big decisions. In Parenthood, Conley hilariously reports the results of those experiments, from building his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that.
