The Horse That Won't Go Away Thomas Heinzhen 2015-01-06 Can a horse really do arithmetic? For a time a great many people thought so, enthralled by the exploits of Clever Hans, a horse that could seemingly answer any question about mathematics, language, and music with stomps of his hoof. Even as celebrated scientists endeavored to discover Hans's secret, people were perfectly comfortable believing something no rational mind should have accepted. How is that possible? In The Horse That Won't Go Away, Tom Heinzhen, Scott Lienhard, and Susan Nolan explore the confounding story of Clever Hans and how we continue to be deceived by beliefs for which there is no supporting logic or evidence. From Clever Hans, to the unsupported claims that facilitated communication could allow persons with autism to communicate, to the exaggerated fear of many parents that their child may be kidnapped the odds of such an event are astronomical, the authors show just how important it is to rely on the scientific method as we navigate our way through everyday life. Exploring Psychology David G. Myers 2010-05-15 Movies and Mental Illness Danny Wedding 2014-05-01 Parenting Conley Donley 2014-03-18 An award-winning scholar offers his unorthodox approach to childrearing. "Parenting is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its consequences." (Amy Chua, author of Battle Hymn of the Tiger Mother). If you’re like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on time-worn religious or cultural traditions. But when Conley Conley, a dual-doctorate student and full-bloated nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In Parenting, Conley hilariously reports the results of these experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley’s sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You’ll be laughing and learning at the same time.

Exploring the Self Dan Zahavi 2000-01-01 The aim of this volume is to discuss recent research into self-experience and its disorders, and to contribute to a better integration of the different empirical and conceptual perspectives. Among the topics discussed are questions like 'What is a self?', 'What is the relation between the self-consciousness of consciousness and the givenness of the conscious self?', 'How should we understand the self-disorders encountered in schizophrenia?' and 'What general insights into the nature of the self can pathological phenomena provide us with?'. Most of the contributions are characterized by a distinct phenomenological approach. The chapters by Butterworth, Strawson, Zahavi, and Marbach are general in nature and address different psychological and philosophical aspects of what it means to be a self. Next Eilan, Panas, and Sass turn to schizophrenia and ask both how we should approach and understand this disorder, and, more specifically, what we can learn about the nature of selfhood and existence from psychopathology. The chapters by Blakemore and Gallagher present a defense and a criticism of the so-called model of self-monitoring, respectively. The final three chapters by Cutting, Stanghellini, Schwartz and Wiggins represent anthropologically oriented attempts to situate pathologies of self-experience. (Series B) Psychology James S. In The Psychology of Superheroes, almost two dozen psychologists get into the heads of today's most popular and intriguing superheroes. Why do superheroes choose to be superheroes? Where does Spider-Man's altruism come from, and what does it mean? Why is there so much prejudice against the X-Men, and how could they have responded to it, other than the way they did?
