Exploring the Self Dan Zahavi 2000-01-01 The aim of this volume is to discuss recent research into self-experience and its disorders, and to contribute to a better integration of the different empirical and conceptual perspectives. Among the topics discussed are questions like 'What is a self?,' 'What is the relation between the self-givenness of consciousness and the givenness of the conscious self?,' 'How should we understand the self-disorders encountered in schizophrenia?' and 'What general insights into the nature of the self can pathological phenomena provide us with?' Most of the contributions are characterized by a distinct phenomenological approach. The chapters by Butterworth, Strawson, Zahavi, and Marbach are general in nature and address different psychological and philosophical aspects of what it means to be a self. Next Eilan, Parnas, and Sass turn to schizophrenia and ask both how we should approach and understand this disorder, and, more specifically, what we can learn about the nature of selfhood and existence from psychopathology. The chapters by Blakemore and Gallagher present a defense and a criticism of the so-called model of self-monitoring, respectively. The final three chapters by Cutting, Stanghellini, Schwartz and Wiggins represent anthropologically oriented attempts to situate the pathologies of self-experience. (Series B) Psychology Richard A. The Man Who Mistook His Wife for a Hat Oliver Sacks 2021-09-14 In his most extraordinary book, the bestselling author of Awakenings and "poet laureate of medicine" (The New York Times) recounts the case histories of patients inhabiting the compelling world of neurological disorders, from those who are no longer able to recognize common objects to those who gain extraordinary new skills. Featuring a new preface, Oliver Sacks's The Man Who Mistook His Wife for a Hat tells the stories of individuals afflicted with perceptual and intellectual disorders: patients who have lost their memory and with them the greater part of their pasts; who are no longer able to recognize people and common objects; whose limbs seem alien to them; who lack some skills yet are gifted with uncanny artistic or mathematical talents. In Dr. Sacks's splendid and sympathetic telling, his patients are deeply human and his tales are studies of struggles against incredible adversity. A great healer, Sacks never loses sight of medicine's ultimate responsibility: "the suffering, afflicted, fighting human subject."

A Bright Red Scream Marilee Strong 1999-10-01 "I highly recommend A Bright Red Scream, because it's beautifully written and ... so candid." –Amy Adams, star of HBO’s Sharp Objects in Entertainment Weekly

Self-mutilation is a behavior so shocking that it is almost never discussed. Yet estimates are that upwards of eight million Americans are chronic self-injurers. They are people who use knives, razor blades, or broken glass to cut themselves. Their numbers include the actor Johnny Depp, Girl Interrupted author Susanna Kaysen, and the late Princess Diana. Mistakenly viewed as suicide attempts or senseless masochism—even by many health professionals—"cutting" is actually a complex means of coping with emotional pain. Marilee Strong explores this hidden epidemic through case studies, starting new research from psychologists, trauma experts, and
neuroscientists, and the heartbreaking insights of cutters themselves—who range from troubled teenagers to middle-age professionals to grandparents. Strong explains what factors lead to self-mutilation, why cutting helps people manage overwhelming fear and anxiety, and how cutters can heal both their internal and external wounds and break the self-destructive cycle. A Bright Red Scream is a ground-breaking, essential resource for victims of self-mutilation, their families, teachers, doctors, and therapists.

The Worry Trick
David A. Carbonell 2016-02-02 Are you truly in danger or has your brain simply "tricked" you into thinking you are? In The Worry Trick, psychologist and anxiety expert David Carbonell shows how anxiety hijacks the brain and offers effective techniques to help you break the cycle of worry, once and for all.

Anxiety is a powerful force. It makes us question ourselves and our decisions, causes us to worry about the future, fills our days with emotional turbulence. Based in acceptance and commitment therapy (ACT) and cognitive behavioral therapy (CBT), this book is designed to help you break the cycle of worry. Worry convinces us there's danger, and then tricks us into getting into fight, flight, or freeze mode—even when there is no danger.

The techniques in this book, rather than encouraging you to avoid or try to resist anxiety, shows you how to see the trick that underlies your anxious thoughts, and how avoidance can backfire and make anxiety worse. If you're ready to start observing these genes work, common misconceptions about genes, and their implications for the future of genetic engineering. 30,000 first printing.

Handbook of Family Therapy
Thomas L. Sexton 2015-12-07 Integrative, research-based, multisystemic: these words reflect not only the state of family therapy, but the nature of this comprehensive handbook as well. The contributors, all well-recognized names who have contributed extensively to the field, accept and embrace the tensions that emerge when integrating theoretical perspectives and science in clinical settings to document the current evolution of couples and family therapy, practice, and research. Each individual chapter contribution is organized around a central theme—that the integration of theory, clinical wisdom, and practical and meaningful research produce the best understanding of couple and family relationships, and the best treatment options. The handbook contains five parts:

- Part I describes the history of the field and its current core theoretical constructs
- Part II analyzes the theories that form the foundation of couple and family therapy, chosen because they best represent the broad range of schools of practice in the field
- Part III provides the best examples of approaches that illustrate how clinical models can be theoretically integrative, evidence-based, and clinically responsive
- Part IV summarizes evidence and provides useful findings relevant for research and practice
- Part V looks at the application of couple and family interventions that are based on emerging clinical needs, such as divorce and working in medical settings.

Handbook of Family Therapy illuminates the threads that are common to family therapies and gives voice to the range of perspectives that are possible. Practitioners, researchers, and students need to have this handbook on their shelves, both to help look back on our past and to usher in the next evolution in family therapy.

Movies and Mental Illness Danny Wedding 2014-05-01 The Greening of Theology Steven Bouma-Prediger 1995 This volume examines the contributions of three contemporary theologians -- Rosemary Radford Ruether, Joseph Sittler, and Jürgen Moltmann -- to the development of Christian ecological theology. Against the charge that the Christian tradition is ecologically bankrupt, the author demonstrates the intellectual and spiritual resources available within Christianity for addressing ecological issues. Of particular interest are Ruether's doctrine of God and her emphasis on ecojustice, Sittler's cosmic Christology and reconception of the relation between nature and grace, and Moltmann's doctrine of the Holy Spirit and argument for social trinitarianism. Beyond evaluating the issues raised by Ruether, Sittler, and Moltmann, the author presents sixteen theses or desiderata for any adequate Christian ecological theology.
