Organizational Maintenance Manual 1971
The Home Owner's Guide to HVAC Rob Turner P.E. 2021-08-04 How green is green? The average homeowner is usually well-informed about which products and concepts are considered “green,” but they seem to have less of an understanding of

how they compare, and which things work the best for the lowest investment. Did you know that 40 percent of the average home power bill is dedicated to air conditioning in warm climates? Further, energy is spent on cooking, hot water, clothes dryers, and such. Did you know that solar hydronic panels are way more efficient than solar

voltaic panels? How about instantaneous water heaters? Are they good? Homeowners need to make dozens of decisions about which products or services they need in order to make their home the most efficient it can be for the given budget. Do you have mold or humidity problems? If you want to learn about things like the home envelope, HVAC, hot water, and electrical systems, this book is for you. It is written in plain English, and covers all the bases. Also, given are tips on saving the environment from an engineer's perspective. The author is a big fan of the environment, but does not like "greenwashing." The generic definition of greenwashing is the practice of making an unsubstantiated or misleading claim about the environmental benefits of a product, service, or technology. Pros and cons of various "green" products are discussed so that the homeowner can understand the

smartest purchases and practices. One of the things you will learn is that the envelope of the home is just as important as the HVAC. You have to understand both to be successful. The envelope is thoroughly discussed as well as HVAC, plumbing, electrical, and the various green technologies.

Human Rights and Digital Technology

Susan Perry 2016-12-07 Analysing the convergence of law and regulation with rapidly evolving communications technologies, this interdisciplinary work navigates the intricate balancing act between human rights protection and technological innovation in a digital age, and illuminates the comprehensive potential of human rights to frame our intelligent use of technology. The authors address such pressing questions as how to protect user privacy online, whether digital pollution is a health hazard, who should

have control and be responsible for data technologies and how to maintain human autonomy in a world of interconnected objects. By considering specific cases, this book provides an in-depth exploration of the many regulatory and technological choices citizens, states, civil society organizations and the private sector should consider to ensure that digital technology more fully serves human needs.

Building Energy Modeling with OpenStudio

Larry Brackney 2018-05-15 This textbook teaches the fundamentals of building energy modeling and analysis using open source example applications built with the US DOE's OpenStudio modeling platform and EnergyPlus simulation engine. Designed by researchers at US National Laboratories to support a new generation of high performance buildings, EnergyPlus and OpenStudio are revolutionizing how building energy modeling is taught in

universities and applied by professional architects and engineers around the world. The authors, all researchers at National Renewable Energy Laboratory and members of the OpenStudio software development team, present modeling concepts using open source software that may be generally applied using a variety of software tools commonly used by design professionals. The book also discusses modeling process automation in the context of OpenStudio Measures—small self-contained scripts that can transform energy models and their data—to save time and effort. They illustrate key concepts through a sophisticated example problem that evolves in complexity throughout the book. The text also examines advanced topics including daylighting, parametric analysis, uncertainty analysis, design optimization, and model calibration. Building Energy Modeling with OpenStudio teaches students

to become sophisticated modelers rather than simply proficient software users. It supports undergraduate and graduate building energy courses in Architecture, and in Mechanical, Civil, Architectural, and Sustainability Engineering.

Hive Lisa M. Cini 2017-04-27 This is not just a book, its a MOVEMENT. Lisa did not choose to write Hive, Hive chose her. Kute Blackson, transformational teacher and bestselling author of You.Are.The.One. Four generations live under one roof in Columbus, Ohio, and theyve figure out to make it work: dividing responsibilities and chores, re-designing some physical spaces for privacy, and reconfiguring others into common areas for all to gather and enjoy living together. This tale of heartache, heroism, and hope is one familys multi generational social experiment, which encompasses kids in their teens, parents in their forties, grandparents in their

seventies, and a ninety-plus year-old great-grandmother. Together, as they navigate the joys and challenges that come with aging in America, theyre also answering the question, How does family help you thrive at home when youre old? An Alzheimers/dementia diagnosis adds a layer of complexity, yet the family resolves to keep their eldest at home for as long as shes happy, safe and engaged in life. The younger generation learns much from their elders, and the elders from their children. While mastering the use of technology and new family systems, theyre also mastering the use of humor, tolerance, and patience. Ultimately, thats what makes this four-generation experiment a success. Practical design advice and clear-eyed strategies are mixed with personal tips and observations, making it easy to see how anyone can transform their home in into their own multi-generational living situation. Her

stories are honest, both funny and poignant. The family's fiascos are counterbalanced by their many successes, the greatest one being that as individuals and as a family, they continue to thrive.

The Animal Lover's Guide to Changing the World Stephanie Feldstein 2018-06-05

"This book belongs on every animal lover's shelf—and it's a particularly great gift for young people who are on fire to save animals but are unsure where to start. Hooray!!" —Sy Montgomery, author of *The Good Good Pig* and *The Soul of an Octopus*

The Animal Lover's Guide to Changing the World is the inspiring, accessible, and empowering book for everyone who loves animals and wants to live a more animal-friendly life, even if they aren't ready to join a movement or give up bacon. With more than 7.5 billion people on the planet, wildlife is going extinct at the fastest rate since the dinosaurs. Three to four million

dogs and cats are killed in shelters every year; billions of chickens, pigs, and cows are killed for food; and countless animals are killed in research labs or their habitat. The numbers are daunting, but there's good news too! Even one person truly can make a difference without breaking the bank. With Stephanie Feldstein's straightforward and encouraging guidance, readers will learn how to take action to create a better world for the animals we love. It starts with changes as simple as taking a shorter shower, skipping meat once a week, wearing "this" not "that," and extends all the way to online activism and politics. The animals need us; so let's get on with some world changing!

Building Cities to LAST Jassen Callender 2021-12-31 *Building Cities to LAST* presents the myriad issues of sustainable urbanism in a clear and concise system, and supports holistic thinking about sustainable development in urban environments by providing four broad measures of urban sustainability that differ radically from other, less long-lived patterns: these are

Lifecycle, Aesthetics, Scale, and Technology (LAST). This framework for understanding the relationship between these four measures and the essential types of infrastructure—grouped according to the basic human needs of Food, Shelter, Mobility, and Water—is laid out in a simple and easy-to-understand format. These broad measures and infrastructures address the city as a whole and as a recognizable pattern of human activity and, in turn, increase the ability of cities—and the human race—to LAST. This book will find wide readership particularly among students and young practitioners in architecture, urban planning, and landscape architecture.

The Business Model: How to Develop New Products, Create Market Value and Make the Competition Irrelevant

Alexander Chernev 2017-03-19 New product success is often attributed to

intuition. Yet, while some products born from intuition do make it big, many others crash and burn. The reason is that intuition is only one aspect of new product development. The other key ingredient of success is having a business model that outlines the ways in which new products will create market value. This book offers a systematic approach to identifying market opportunities and developing breakthrough business models. It outlines the key principles of business model generation, presents a value-based framework for developing viable new offerings, and provides a set of practical tools for creating a meaningful value proposition that drives market success. The business model framework outlined in this book applies to a wide range of companies—startups and established enterprises, consumer-packaged-goods companies and business-to-business enterprises, high-tech and low-

tech ventures, online and brick-and-mortar entities, product manufacturers and value-added service providers, nonprofit organizations and profit-driven companies. Practical, actionable, and succinct, *The Business Model* is the essential reference and how-to guide for everyone seeking to achieve market success: from entrepreneurs to experienced managers, from senior executives to product designers, from those creating new market offerings to those improving on existing ones. This book is for those passionate about building great products that create market value and disrupt industries.

Machine Learning with Go Quick Start Guide Michael Bironneau 2019-05-31 This quick start guide will bring the readers to a basic level of understanding when it comes to the Machine Learning (ML) development lifecycle, will introduce Go ML libraries and then will exemplify common ML methods

such as Classification, Regression, and Clustering Key Features Your handy guide to building machine learning workflows in Go for real-world scenarios Build predictive models using the popular supervised and unsupervised machine learning techniques Learn all about deployment strategies and take your ML application from prototype to production ready Book Description Machine learning is an essential part of today's data-driven world and is extensively used across industries, including financial forecasting, robotics, and web technology. This book will teach you how to efficiently develop machine learning applications in Go. The book starts with an introduction to machine learning and its development process, explaining the types of problems that it aims to solve and the solutions it offers. It then covers setting up a frictionless Go development environment, including running Go interactively with Jupyter

notebooks. Finally, common data processing techniques are introduced. The book then teaches the reader about supervised and unsupervised learning techniques through worked examples that include the implementation of evaluation metrics. These worked examples make use of the prominent open-source libraries GoML and Gonum. The book also teaches readers how to load a pre-trained model and use it to make predictions. It then moves on to the operational side of running machine learning applications: deployment, Continuous Integration, and helpful advice for effective logging and monitoring. At the end of the book, readers will learn how to set up a machine learning project for success, formulating realistic success criteria and accurately translating business requirements into technical ones. What you will learn Understand the types of problem that machine learning solves, and the

various approaches Import, pre-process, and explore data with Go to make it ready for machine learning algorithms Visualize data with gonum/plot and Gophernotes Diagnose common machine learning problems, such as overfitting and underfitting Implement supervised and unsupervised learning algorithms using Go libraries Build a simple web service around a model and use it to make predictions Who this book is for This book is for developers and data scientists with at least beginner-level knowledge of Go, and a vague idea of what types of problem Machine Learning aims to tackle. No advanced knowledge of Go (and no theoretical understanding of the math that underpins Machine Learning) is required.

WHAT IT CAN DO Homekit products, along with an iOS device allows the user to connect directly with home accessories to set lights, thermostat and lock timers to go off or on at certain times. It also enables you to use voice commands to perform some of these tasks within your home.

Home Automation Lisa Montgomery, Editor, Electronic House Magazine 2014-09-12 Smart home, automated home, connected home or intelligent home. Whatever you call it, a home that's able to take the drudgery out of common, everyday

tasks is something that every family can appreciate. In this inaugural book about home automation you'll learn how to incorporate the right types of products and systems into your house to achieve a new level of comfort, convenience, safety and efficiency. The book walks you step-by-step through the process of automating your home, and because automation systems are able to control just about anything electronic you can imagine, we've provided plenty of practical ideas. In 10 Key Features of a Home Automation System and Automation Ideas for Every System of Your House you'll gather more than enough recommendations to get started in your automation endeavor. No matter how many great ideas you gather from our Home Automation book, though, it's important that the system you buy today incorporates the most recent iterations of control technologies. We've followed the

automation trends, put them into perspective, and offer advice on the critical new updates, upgrades and upstarts you'll want to look into when selecting a system. In addition to deciding what you want your automation system to do, you'll want to determine whether you'd like to install the system yourself or hire a professional to handle the task. Both methods offer their own unique set of advantages and disadvantages, so be sure to read *DIY or Professionally Installed?* before making your decision. You'll also want to check out our comprehensive directory of home automation manufacturers before taking the plunge. Finally, we finish the book with a series of finished automation installations, which range from a basic starter package in a condo to a full-blown, bells-and-whistles system for a bigger house. You'll see what types of features that owners of these homes chose to incorporate and hear how

automation is truly making a difference in their lives. The technology has been so carefully designed and meticulously installed, that you may not even notice it in the full-color photography of many of the rooms where lights, motorized window shades and A/V equipment have been automated to dim, brighten, turn on and off, open and close and adjust and reset, based on the time of day, occupancy or the single touch of a button.

Designing for Sustainability Tim Frick 2016-08-23 Pixels use electricity, and a lot of it. If the Internet were a country, it would

be the sixth largest in terms of electricity use. That's because today's average web page has surpassed two megabytes in size, leading to slow load times, frustrated users, and a lot of wasted energy. With this practical guide, your web design team will learn how to apply sustainability principles for creating speedy, user-friendly, and energy-efficient digital products and services. Author Tim Frick introduces a web design framework that focuses on four key areas where these principles can make a difference: content strategy, performance optimization, design and user experience, and green hosting. You'll discover how to provide users with a streamlined experience, while reducing the environmental impact of your products and services. Learn why 90% of the data that ever existed was created in the last year Use sustainability principles to innovate, reduce waste, and function more efficiently

Explore green hosting, sustainable business practices, and lean/agile workflows Put the right things in front of users at precisely the moment they need them—and nothing more Increase site search engine visibility, streamline user experience, and make streaming video more efficient Use Action Items to explore concepts outlined in each chapter

The Guide Peter Heller 2022-05-10

NATIONAL BESTSELLER • The best-selling author of *The River* returns with a heart-racing thriller about a young man who is hired by an elite fishing lodge in Colorado, where he uncovers a plot of shocking menace amid the natural beauty of sun-

drenched streams and forests. "Peter Heller is the poet laureate of the literary thriller." —Michael Koryta, New York Times best-selling author of *Those Who Wish Me Dead* Kingfisher Lodge, nestled in a canyon on a mile and a half of the most pristine river water on the planet, is known by locals as "Billionaire's Mile" and is locked behind a heavy gate. Sandwiched between barbed wire and a meadow with a sign that reads "Don't Get Shot!" the resort boasts boutique fishing at its finest. Safe from viruses that have plagued America for years, Kingfisher offers a respite for wealthy clients. Now it also promises a second chance for Jack, a return to normalcy after a young life filled with loss. When he is assigned to guide a well-known singer, his only job is to rig her line, carry her gear, and steer her to the best trout he can find. But then a human scream pierces the night, and Jack soon realizes that this idyllic fishing lodge may

be merely a cover for a far more sinister operation. A novel as gripping as it is lyrical, as frightening as it is moving, *The Guide* is another masterpiece from Peter Heller.

Build Tony Fadell 2022-05-03 **New York Times, Wall Street Journal, and USA Today Bestseller** Tony Fadell led the teams that created the iPod, iPhone and Nest Learning Thermostat and learned enough in 30+ years in Silicon Valley about leadership, design, startups, Apple, Google, decision-making, mentorship, devastating failure and unbelievable success to fill an encyclopedia. So that's what this book is. An advice encyclopedia. A mentor in a box. Written for anyone who wants to grow at work—from young grads navigating their first jobs to CEOs deciding whether to sell their company—*Build* is full of personal stories, practical advice and fascinating insights into some of the most impactful

products and people of the 20th century. Each quick 5-20 page entry builds on the previous one, charting Tony's personal journey from a product designer to a leader, from a startup founder to an executive to a mentor. Tony uses examples that are instantly captivating, like the process of building the very first iPod and iPhone. Every chapter is designed to help readers with a problem they're facing right now—how to get funding for their startup, whether to quit their job or not, or just how to deal with the jerk in the next cubicle. Tony forged his path to success alongside mentors like Steve Jobs and Bill Campbell, icons of Silicon Valley who succeeded time and time again. But Tony doesn't follow the Silicon Valley credo that you have to reinvent everything from scratch to make something great. His advice is unorthodox because it's old school. Because Tony's learned that human nature doesn't change.

You don't have to reinvent how you lead and manage—just what you make. And Tony's ready to help everyone make things worth making.
