Introduction to Database Systems Itl
Education Solutions Limited 2010-09
Database Systems Elvis Foster
2014-12-24 Database Systems: A
Pragmatic Approach is a classroom
textbook for use by students who are
learning about relational databases,
and the professors who teach them. It
discusses the database as an
essential component of a software
system, as well as a valuable,
mission critical corporate resource.
The book is based on lecture notes
that have been tested and proven over
several years, with outstanding
results. It also exemplifies mastery
of the technique of combining and
balancing theory with practice, to
give students their best chance at
success. Upholding his aim for
brevity, comprehensive coverage, and
relevance, author Elvis C. Foster's
practical and methodical discussion
style gets straight to the salient
issues, and avoids unnecessary fluff
as well as an overkill of theoretical
calculations. The book discusses
concepts, principles, design,
implementation, and management issues
of databases. Each chapter is organized systematically into brief, reader-friendly sections, with itemization of the important points to be remembered. It adopts a methodical and pragmatic approach to solving database systems problems. Diagrams and illustrations also sum up the salient points to enhance learning. Additionally, the book includes a number of Foster's original methodologies that add clarity and creativity to the database modeling and design experience while making a novel contribution to the discipline. Everything combines to make Database Systems: A Pragmatic Approach an excellent textbook for students, and an excellent resource on theory for the practitioner.

RUDIMENTS OF MODERN COMPUTER APPLICATION

Applied Computing Suresh Manandhar
2005-01-11 The focus of the Asian Applied Computing Conference (AACC) is primarily to bring the research in computer science closer to practical applications. The conference is aimed primarily at topics that have immediate practical benefits. By hosting the conference in the developing nations in Asia we aim to provide a forum for engaging both the academic and the commercial sectors in that region. The first conference “Information Technology Prospects and Challenges” was held in May 2003 in Kathmandu, Nepal. This year the conference name was changed to “Asian Applied Computing Conference” to reflect both the regional and the application-oriented nature of the conference. AACC is planned to be a themed conference with a primary focus on a small set of topics although other relevant applied topics will be considered. The theme in AACC 2004 was on the following topics: systems and architectures, mobile and ubiquitous computing, soft computing, man machine interfaces, and innovative applications for the developing world. AACC 2004 attracted 184 paper submissions from around the world, making the reviewing and the selection process tough and time consuming. The selected papers covered a wide range of topics: genetic algorithms and soft computing; scheduling, optimization and constraint solving; neural networks and support vector machines; natural language processing and information retrieval; speech and signal processing; networks and mobile computing; parallel, grid and high-performance computing; innovative applications for the developing world; cryptography and security; and machine learning. Papers were primarily judged on
originality, presentation, relevance and quality of work. Papers that had clearly demonstrated results were given preference.
