Scientific and Statistical Database Management Marianne Winslett 2009-05-22 This volume contains the proceedings of SSDBM 2009, the 21st International Conference on Scienti?c and Statistical Database Management. SSDBM 2009 took place during June 2–4, 2009, at the Hotel Monteleone in New Orleans, USA. The SSDBM conference series brings together scienti?c domain experts, database researchers, practitioners, and developers for the presentation and -change of current research concepts, tools, and techniques for scienti?c and s- tistical database applications. SSDBM organizersstrive to provide a stimulating environment to encourage discussion, fellowship, and exchange of ideas in all aspects of research related to scienti?c and statistical databases, including both original research contributions and insights from practical system design, imp- mentation, and evaluation. SSDBM 2009 received 76 submissions from 18 countries. Each

submission was reviewed by three Program Committee members, leading to the acceptance of 29long papers and 12 shortpapers.The shortpapers include a mix ofdem- strations, poster papers, and traditional conference presentations. Medical Data Privacy Handbook Aris Gkoulalas-Divanis 2015-11-26 This handbook covers Electronic Medical Record (EMR) systems, which enable the storage, management, and sharing of massive amounts of demographic, diagnosis, medication, and genomic information. It presents privacy-preserving methods for medical data, ranging from laboratory test results to doctors' comments. The reuse of EMR data can greatly benefit medical science and practice, but must be performed in a privacy-preserving way according to data sharing policies and regulations. Written by world-renowned leaders in this field, each chapter offers a survey of a research direction or a solution to problems in established and emerging research areas. The authors explore scenarios and techniques for facilitating the anonymization of different types of medical data, as well as various data mining tasks. Other chapters present methods for emerging data privacy

applications and medical text de-identification, including detailed surveys of deployed systems. A part of the book is devoted to legislative and policy issues, reporting on the US and EU privacy legislation and the cost of privacy breaches in the healthcare domain. This reference is intended for professionals, researchers and advanced-level students interested in safeguarding medical data.

The Korean Automotive Industry, Volume 1 A. J. Jacobs 2022 In 1962, South Korea assembled just 1,100 new automobiles. By 1996, this total had soared to 2,812,714. What explains this remarkable growth? The answer is complex, and involves a combination of a supportive State, timely technology alliances, a skilled but historically low-paid workforce, aggressive pricing, savvy entrepreneurs, and fortuitous circumstances. Despite this amazing ascent, comparatively little has been written about the Korean auto industry in English. In the first of a two-volume set, this 11-chapter book seeks to help fill this void by providing in-depth examinations of all six of Koreas automakers from their beginnings through 1996. Uniquely written from the perspective of industry analysts at the time (without knowledge of the Asian Fiscal Crisis), the book should prove informative to practitioners, scholars, and students interested in automotive history, international political economy, Asian studies, and more. A.J. Jacobs is Professor of Sociology at East Carolina University, USA.

Activity Recognition in Pervasive Intelligent Environments Liming Chen 2011-05-04 This book consists of a number of chapters addressing different aspects of activity recognition, roughly in three main categories of topics. The first topic will be focused on activity modeling, representation and reasoning using mathematical models, knowledge representation formalisms and AI techniques. The second topic will concentrate on activity recognition methods and algorithms. Apart from traditional methods based on data mining and machine learning, we are particularly interested in novel approaches, such as the ontology-based approach, that facilitate data integration, sharing and automatic/automated processing. In the third topic we intend to cover novel architectures and frameworks for activity recognition, which are scalable and applicable to large scale distributed dynamic environments. In addition, this topic will also include the underpinning technological infrastructure, i.e. tools and APIs, that supports function/capability sharing and reuse, and rapid development and deployment of technological solutions. The fourth category of topic will be dedicated to representative applications of activity recognition in intelligent environments, which address the life cycle of activity recognition and their use for novel functions of the end-user systems with comprehensive implementation, prototyping and evaluation. This will include a wide range of application scenarios, such as smart homes, intelligent conference venues and cars.

Web Reasoning and Rule Systems Pascal Hitzler 2010-09-20 The Semantic Web aims at allowing knowledge to be freely accessed and - changed by software. It is now widely recognized that if the Semantic Web is to contain deep knowledge, the need for new representation and reasoning te-niques is critical. These techniques need to ?nd the right trade-o? between - pressiveness, scalability, and robustness to deal with the inherently incomplete, contradictory, and uncertain nature of knowledge on the Web. The annual International Conference on Web Reasoning and Rule Systems (RR) addresses these needs and has grown into a major international forum for the discussion and dissemination of new results concerning Web Reasoning and Rule Systems. The ?rst three International Conferences on Web Reasoning and Rule Systems (see http://www.rr-conference.org), held in Innsbruck, A- tria (2007), Karlsruhe, Germany (2008), and Chantilly, Virginia, USA (2009), received enthusiastic support from the Web Reasoning community. This volume contains the papers presented at the Fourth International C-ference on Web Reasoning and Rule Systems (RR 2010), which was held in Bressanone/Brixen, Italy, September 22-24, 2010, and which continued the - cellence of the RR series. It contains nine full papers, six short papers, four poster/position papers, one PhD paper, and two system descriptions, which wereselectedoutof31submissionsfollowinga rigorousreviewingprocess,where each submission was reviewed by at least three program committee members.
