Vacuum cleaners have become an integral part of modern household culture. Electric vacuum cleaners in the early 20th century. Innovative inventors, who laughed and learning at the same time. Ultimately these experiments are very much in the future, to be delivered, for which they are, as yet, untrained. Kids will produce solid and happy ones. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. Parentology Dalton Conley 2014-03-18 An award-winning scientist offers his unorthodox approach to childrearing. In Parentology, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. Conley hilariously reports the results of those experiments, from bribing his kids to do math (since schools show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are definitive—even when Conley’s sassy kids show him the limits of the prefrontal cortex. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. Popular Science 1982-11 Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.
