**Embedded System Applications**

Jean-Claude Baron 2013-04-17

Embedded systems encompass a variety of hardware and software components which perform specific functions in host systems, for example, satellites, washing machines, hand-held telephones and automobiles. Embedded systems have become increasingly digital with a non-digital periphery (analog power) and therefore, both hardware and software codesign are relevant. The vast majority of
computers manufactured are used in such systems. They are called 'embedded' to distinguish them from standard mainframes, workstations, and PCs. Although the design of embedded systems has been used in industrial practice for decades, the systematic design of such systems has only recently gained increased attention. Advances in microelectronics have made possible applications that would have been impossible without an embedded system design. Embedded System Applications describes the latest techniques for embedded system design in a variety of applications. This also includes some of the latest software tools for embedded system design. Applications of embedded system design in avionics, satellites, radio astronomy, space and control systems are illustrated in separate chapters. Finally, the book contains chapters related to industrial best-practice in embedded system design. Embedded System Applications will be of interest to researchers and designers working in the design of embedded systems for industrial applications.

Strategic Management in the Arts Lidia Varbanova 2013-01-03 Strategic Management in the Arts looks at the unique characteristics of organisations in the arts and culture sector and shows readers how to tailor a strategic plan to help these diverse organizations meet their objectives. Strategic management is an essential element that drives an organisation’s success, yet many cultural organizations have yet to apply strategic thinking and entrepreneurial actions within the management function. Varbanova reviews the existing theories and models of strategic management and then relates these specifically to cultural organisations. Also included are sections on entrepreneurship and innovations in the arts, considering the concept of a ‘learning organisation’ — an organisation able to adapt its strategy within a constantly changing, complex environment. The book is structured to walk the reader through each element of the strategic plan systematically. With a fresh approach, key questions, examples, international cases to connect theory with practice and suggestions for further reading,
this book is designed to accompany classes on strategic planning, cultural management or arts management.
