by experts from around the world who discuss extreme hydrology topics, from monitoring, to modeling and management. With extreme climatic and hydrologic events becoming so frequent, this book is a critical source, adding knowledge to the science of extreme hydrology. Topics covered include hydromonitoring monitoring, climate variability and trends, hydrological variability and trends, landscape dynamics, drought processes, and extreme events management, adaptation and mitigation. Each of the book’s chapters provide background and theoretical foundations followed by approaches used and results of the applied studies. This book will be highly used by water resource managers and extreme event researchers who are interested in understanding the processes and teleconnectivity of large-scale climate dynamics and extreme events, predictability, simulation and intervention measures. Presents datasets used and methods followed to support the findings included, allowing readers to follow these steps in their own research. Provides variable methodological approaches, thus giving the reader multiple hydrological modeling information to use in their work. Includes a variety of case studies, thus making the context of the book relevant to everyday working situations for those studying extreme hydrology. The Jordan Rift Valley

Aharon Horowitz 2001-01-01

Delivering a synthesis of almost one hundred and fifty years of research into the Jordan Rift Valley, this genuinely comprehensive text presents a model explaining the tectonic evolution of this part of the Syro-African Rift Valley, which may affect opinions regarding the geotectonic pattern of the entire western Levant. Also including datings and paleoenvironmental reconstructions for all important phases in the history of the Jordan Valley, particular focus is placed on the last two million years, when numerous habitation sites, the oldest of which represents the initial spread of Man out of Africa, indicate the region was almost continuously populated. The Jordan Rift Valley: A Barren Heritage 2015-10-28 This book examines the political development and transformation of Hamas from a resistance movement into a political authority in the Gaza Strip, as a result of the group’s victory in the Palestinian national elections of 2006. From a political science and conflict transformation perspective, it focuses on the political opportunities, challenges and process of environmental and structural change which led the resistance movement to evolve from an underground militant group to a force in conventional politics. This study offers an analysis of Hamas’ formation, development, political and strategic transformation, and the organizational structure shifts required by the transition. Through the adoption of a peace studies perspective, Hamas Transformation: Opportunities and Challenges also explores the political changes made by Hamas, including the structural alterations that took place within Palestinian society in the Gaza Strip as a result of the movement’s growing political influence, culminating in the 2006 elections and the formation of the new Hamas government in 2007. Additionally, the book examines the new dimensions and phases of Hamas’ political development after its victories in the elections, Palestinian division and the setbacks of the Arab Spring. Relying on a range of sources regarding the experiences of Hamas in governance, the book concludes with an in-depth illustration of Hamas’ mixed strategy of governance and resistance.
