Social Play in Primates Euclid Smith 2012-12-02 Social Play in Primates provides comprehensive discussions on the social aspect of play in the behavior of primates. It also presents various approaches in understanding the complex behavioral phenomenon of play. Composed of 11 chapters, the book starts by discussing the historical background of play. It also traces the development of the interest in the study of play from the writings of Aristotle, through educational reformers of the 17th and 18th centuries, to the psychologists of the 19th and early 20th centuries. The book then presents important data on the effects of gonadectomy on social play in group-living thersus monkeys. It also presents a comparative study about the play behavior of three of the four great ape species. Furthermore, it offers a view of the function of play in primate society.

Finally, the book examines play in young humans by citing some significant information on the nature of peer- vs. adult-oriented early social experience. The book concludes by presenting both the theoretical and methodological aspects on the study of play. Of Women and Salt Gabriela Garcia 2021-05-11 A sweeping, masterful debut about a daughter's fateful choice, a mother motivated by her own past, and a family legacy that begins in Cuba before either of them were born. 1866, Cuba: Maria Isabel is the only woman working at a cigar factory, where each day the workers are read Victor Hugo and encouraged to recognize their value and strength. But these are dangerous political times, and as Maria begins to see marriage and motherhood as her only options for survival, the sounds of war are approaching. In present-day Miami, Jeanette is battling addiction. Daughter of Carmen, a Cuban immigrant, she is determined to learn more about her family history from her reticent mother and makes the snap decision to take in the daughter of a neighbour detained by immigration officers. Carmen, still wrestling with the trauma of displacement, must process her difficult relationship with her own mother while trying to raise a wayward Jeanette. Steadfast in her quest for understanding, Jeanette travels to Cuba to see her grandmother and reckon with secrets from the past destined to erupt. From 19th-century cigar factories to present-day detention centers, from Cuba to Mexico, Gabriela Garcia's Of Women and Salt follows Latina women of fierce pride and longing, all irrevocably linked by the inheritance of trauma, and the stories passed between them. It is a haunting meditation on the choices of mothers and the tenacity of women who choose to tell their stories despite those who wish to silence them. WHO Guidelines on Safety Monitoring of Herbal Medicines in Pharmacovigilance Systems World Health Organization 2004-01-01 Safety is a fundamental principle in the provision of herbal medicines and herbal products for health care and a critical component of quality control. These guidelines provide practical technical guidance for monitoring the safety of herbal medicines with pharmacovigilance systems. Mind-body Interventions for Gastrointestinal Conditions 2001 Long-Term Field Studies of Primates Peter M. Kappeler 2012-01-07 Some primate field studies have been on-going for decades, covering significant portions of individual life cycles or even multiple generations. In this volume, leading field workers report on the history and infrastructure of their projects in Madagascar, Africa, Asia and South America. More importantly, they provide summaries of their long-term research efforts on primate behaviour, ecology and life history, highlighting insights that were only possible because of the long-term nature of the study. The chapters of this volume collectively outline the many scientific reasons for studying primate behaviour, ecology and demography over multiple generations. This kind of research is typically necessitated by the relatively slow life histories of primates. Moreover, a complete understanding of social organization and behaviour, factors often influenced by rare but important events, requires long-term data collection. Finally, long-term field studies are also becoming increasingly important foc of local conservation activities.

Substance and Non-substance Addiction Xiaochu Zhang 2017-11-10 This book focuses on the similarities and differences between substance and non-substance addictions. It discusses in detail the mechanisms, diagnosis and treatment of substance and non-substance addictions, and addresses selected prospects that will shape future studies on addiction. Addiction is a global problem that costs millions of lives tremendous damage year after year. There are mainly two types of addiction: substance addiction (e.g., nicotine, alcohol, cannabis, heroin, stimulants, etc.) and non-substance addiction (e.g., gambling, computer gaming, Internet, etc.). Based on existing evidence, both types of addiction produce negative impacts on individuals' physical, mental, social and financial well-being, and share certain common mechanisms, which involve a dysfunction of the neural reward system and specific gene transcription factors. However, there are also key differences between these two types of addiction. Covering these aspects systematically, the book will provide researchers and graduate students alike a better understanding of drug and behavioral addictions.

The book provides an in-depth examination of the ecological and social aspects of Tibetan macaque behavior, drawing on a wealth of observational and experimental data. It covers topics such as the role of social structure in reproductive success, the impact of predation pressure on population dynamics, and the role ofcstdint behavior in the maintenance of group cohesion. The book also includes chapters on the behavior of related species, such as the Barbary macaque, which provides valuable comparative perspectives.

Additionally, the new edition includes comprehensive updates to the illustrations and data sets, as well as a new chapter on the behavioral ecology of the red leaf monkeys, which are a closely related species. The book is a must-read for researchers and students interested in the behavioral ecology of non-human primates, particularly macaques.

**Dimensional Psychopathology** Massimo Biondi 2018-05-30 This book presents an innovative approach to clinical assessment in psychiatry based on a number of psychopathological dimensions with a presumed underlying pathophysiology, that are related to fundamental phenomenological aspects and lie on a continuum from normality to pathology. It is described how the evaluation of these dimensions with a specific, validated rapid assessment instrument could easily integrate and enrich the classical diagnostic DSM-5 or ICD-10 assessment. The supplemental use of this dimensional approach can better capture the complexity underlying current categories of mental illness. The findings from a large sample suggest how this assessment could give a first glance at how the taxometric psychopathological components within a dimensional diagnostic category can be, and thereby optimize diagnosis and treatment choices. Beside short and easy to complete, this dimensional assessment can be done in a busy clinical setting, during an ordinary psychiatric visit, and in an acute clinical context, with limited effort by a minimally trained clinician. Therefore, it provides interesting and useful information without additional costs, and allows research work to be performed even in difficult settings.

**Cancer Nanotechnology** Sang Hyun Cho 2013-01-08 Rapid advances in nanotechnology have enabled the fabrication of nanoparticles from various materials with different shapes, sizes, and properties, and efforts are ongoing to exploit these materials for practical clinical applications. Nanotechnology is particularly relevant in the field of oncology, as the leaky and chaotic vasculature of tumors—a hallmark of unrestrained growth—results in the passive accumulation of nanoparticles within tumors. Cancer Nanotechnology: Principles and Applications in Radiation Oncology is a compilation of research in the arena of nanoparticles and radiation oncology, which lies at the intersection of disciplines as diverse as classical radiation oncology, radiation physics and biology, nanotechnology, materials science, and biomedical engineering. The book provides a comprehensive, cross-disciplinary survey of basic principles, research techniques, and outcomes with the goals of eventual clinical translation. Coverage includes A general introduction to fabrication, preferential tumor targeting, and imaging of nanoparticles. The specific applications of nanomaterials in the realms of radiation therapy, hyperthermia, thermal therapy, and normal tissue protection from radiation exposure Outlooks for future research and clinical translation including regulatory issues for ultimate use of nanomaterials in humans. Reflecting profound advances in the application of nanotechnology to radiation oncology, this comprehensive volume demonstrates how the unique physicochemical properties of nanoparticles lead to novel strategies for cancer treatment and depletions. Along with various computational and experimental techniques, each chapter highlights the most promising approaches to the use of nanoparticles for radiation response modulation.

**Hospice Care for Children** Walter Holl 2012-11-30 Retraumatization Melanie P. Duckworth 2012-05-22 Exposure to potentially traumatic events puts individuals at risk for developing a variety of psychological disorders. The complexities involved in treating these numerous and having serious repercussions. How should diagnostic criteria be defined? How can we help a client who does not present with traditional PTSD symptoms? The mechanisms of human behavior need to be understood and treatment needs to be tested before we can move beyond traditional diagnostic criteria in designing and implementing treatment. No better guide than Retraumatization exists to fulfill these goals. The editors and contributors, all highly regarded experts, accomplish six objectives: to define retraumatization outline the controversies related to it provide an overview of theoretical models present data related to the frequency of occurrence of different forms of trauma detail the most reliable strategies
