Tabu Search Fred W. Glover 2013-12-01 Faced with the challenge of solving hard optimization problems that abound in the real world, classical methods often encounter great difficulty - even when equipped with a theoretical guarantee of finding an optimal solution. Vitaly important applications in business, engineering, economics and science cannot be tackled with any reasonable hope of success, within practical time horizons, by solution methods that have been the predominant focus of academic research throughout the past three decades (and which are still the focus of many textbooks). The impact of technology and the advent of the computer age have presented us with the need (and opportunity) to solve a range of problems that could scarcely have been envisioned in the past. Weare confronted with applications that span the realms of resource planning, telecommunications, VLSI design, fmancial analysis, scheduling, space planning, energy distribution, molecular engineering, logistics, pattern classification, flexible manufacturing, waste management, mineral exploration, biomedical analysis, environmental conservation and scores of others.

Dark Water Rising Marian Hale 2006-09-19 I looked and saw water rushing in from Galveston Bay on one side and from the gulf on the other. The two seas met in the middle of Broadway, swirling over the wooden paving blocks, and I couldn't help but shudder at the sight. All of Galveston appeared to be under water. Galveston, Texas, may be the booming city of the brand-new twentieth century, but to Seth, it is the end of a dream. He longs to be a carpenter like his father, but his family has moved to Galveston so he can go to a good school. Still, the last few weeks of summer might not be so bad. Seth has a real job as a builder and the beach is within walking distance. Things seem to be looking up, until a storm warning is raised one sweltering afternoon. No one could have imagined anything like this. Giant walls of water crash in from the sea. Shingles and bricks are deadly missiles flying through the air. People not hit by flying debris are swept away by rushing water. Forget the future, Seth and his family will be lucky to survive the next twenty-four hours. Dark Water Rising is a 2007 Bank Street - Best Children's Book of the Year.

Building Information Modeling Nawari O. Nawari 2015-04-21 BIM for Structural Engineering and Architecture Building Information Modeling: Framework for Structural Design outlines one of the most promising new developments in architecture, engineering, and construction (AEC). Building information modeling (BIM) is an information management and analysis technology that is changing the role of computation in the architectural and engineering industries. The innovative process constructs a database assembling all of the objects needed to build a specific structure. Instead of using a computer to produce a series of drawings that together describe the building, BIM creates a single illustration representing the building as a whole. This book highlights the BIM technology and explains how it is redefining the structural analysis and design of building structures. BIM as a Framework Enabler This book introduces a new

framework—the structure and architecture synergy framework (SAS framework)—that helps develop and enhance the understanding of the fundamental principles of architectural analysis using BIM tools. Based upon three main components: the structural melody, structural poetry, and structural analysis, along with the BIM tools as the frame enabler, this new framework allows users to explore structural design as an art while also factoring in the principles of engineering. The framework stresses the influence structure can play in form generation and in defining spatial order and composition. By highlighting the interplay between architecture and structure, the book emphasizes the conceptual behaviors of structural systems and their aesthetic implications and enables readers to thoroughly understand the art and science of whole structural system concepts. Presents the use of BIM technology as part of a design process or framework that can lead to a more comprehensive, intelligent, and integrated building design Places special emphasis on the application of BIM technology for exploring the intimate relationship between structural engineering and architectural design Includes a discussion of current and emerging trends in structural engineering practice and the role of the structural engineer in building design using new BIM technologies Building Information Modeling: Framework for Structural Design provides a thorough understanding of architectural structures and introduces a new framework that revolutionizes the way building structures are designed and constructed.

The papers are organized in the following topical sections: automated theorem proving and model building, combinations of systems, constraint solving, description logics, interactive theorem proving, modal and epistemic logics, and rewriting and unification.

Corpus-based Analyses of the Problem-solution Pattern Lynne Flowerdew 2008 This book reports research on the Problem-Solution rhetorical pattern, which has to date received very little attention in corpus-based studies. Insights from genre analysis and systemic-functional grammar are also applied to the analysis of the Problem-Solution pattern, thus moving towards a more multi-faceted analysis of corpus data. The pattern is investigated in two specialized corpora of technically-oriented report writing, a professional corpus and a student corpus, using a key word and key-key word analysis. Phraseological analyses of key words in both corpora are presented. Data show that students' writing lacks a range of lexico-grammatical patternings for expressing the Problem and Solution elements of the pattern. The book concludes with some pedagogic implications and applications of the findings. Suggested concordancing activities are discussed within the context of key issues in the field of data-driven learning.

One God – One Cult – One Nation Reinhard G. Kratz 2010-09-27 Recent archaeological and biblical research challenges the traditional view of the history of ancient Israel. This book presents the latest findings of both academic disciplines regarding the United Monarchy of David and Solomon ('One Nation') and the cult reform under Josiah ('One Cult'), raising the issue of fact versus fiction. The political and cultural interrelations in the Near East are illustrated on the example of the ancient city of Beth She'an/Scythopolis and are discussed as to their significance for the transformation in the conception of God ('One God'). The volume contains 17 contributions by internationally eminent scholars from Israel, Finland and Germany.

A Construct Validation Study of Implicit and Time Sensitive Vocabulary Measures Bronson Hui 2021 Vocabulary researchers have started expanding their assessment toolbox by incorporating timed tasks and psycholinguistic instruments (e.g., priming tasks) to gain insights into lexical development (e.g., Elgort, 2011; Godfroid, 2020b; Nakata & Elgort, 2020; Vandenberghe et al., 2021). These timed sensitive and implicit word measures differ qualitatively from traditional paper- or accuracy-based vocabulary tests and are believed to tap into lexical strength and representations in the mental lexicon (Elgort, 2018; Godfroid, 2020b). As a result, there have been calls to use both traditional (explicit) and these timed and implicit word measures in a complementary manner (e.g., Godfroid, 2020b; Nakata & Elgort, 2020; Vandenberghe et al., 2021). At the same time, researchers must first develop a thorough understanding of how these different types of measures (explicit vs. implicit and timed vs. untimed) relate to each other before they can make informed decisions on their measurement battery. It is thus well-motivated to examine the construct validity of these measures empirically and systematically. In this validation study, I took the first step to fill this research gap by assessing both the predictive and factorial structure validity of these measures. One hundred and forty-five learners of English took part in five vocabulary tasks: (1) a receptive form-meaning task, where they chose an option representing the meaning of the target word embedded in a sentence, (2) a productive form-meaning task, where they produced the target word to fit a sentence context, (3) a computerized Yes-No (reaction time) test, where they indicated if they knew the target word by pressing keys on their keyboard, (4) a masked repetition priming task with lexical decisions, where they judged if a letter string forms a word in English, and (5) a semantic priming task with lexical decisions. Items in all five tests were the same 40 English words sampled across the 2K - 5K frequency bands. Data analysis involved item inspection and extraction of person-related parameters based on Rasch and/or mixed-effects models. The measures of person ability obtained from individual tasks were then submitted to confirmatory factor analyses in order to assess the psychometric dimensionality of the measure battery. The resulting latent factor(s), representing a pure measure of vocabulary under a specific conceptualization, was then used to predict self-reported proficiency to shed light on their predictive validity. With method effects accounted for, the one-factor solution ("Vocabulary Knowledge") produces a good fit and is preferred based on the principle of parsimony for both the implicit vs. explicit and timed vs. untimed distinctions. This result provides evidence for psychometric unidimensionality of these measures as representing a potential unitary construct of vocabulary knowledge. At the same time, the vocabulary construct has the most explanatory power (predictive validity) when conceptualized distinctly as lexical knowledge (measured untimed tasks) and strength (measured by timed tasks). Taken together, these results foreground the need for researchers to further specify the nature of the vocabulary construct as well as the operational task features with which it can be assessed empirically. Importantly, I call for more measurement validation work as researchers expand their assessment toolboxes in vocabulary research.

Instructional Models in Computer-Based Learning Environments Sanne Dijkstra 2013-11-11 In the last decade there have

been rapid developments in the field of computer-based learning environments. A whole new generation of computer-based learning environments has appeared, requiring new approaches to design and development. One main feature of current systems is that they distinguish different knowledge bases that are assumed to be necessary to support learning processes. Current computer-based learning environments often require explicit representations of large bodies of knowledge, including knowledge of instruction. This book focuses on instructional models as explicit, potentially implementable representations of knowledge concerning one or more aspects of instruction. The book has three parts, relating to different aspects of the knowledge that should be made explicit in instructional models: knowledge of instructional planning, knowledge of instructional strategies, and knowledge of instructional control. The book is based on a NATO Advanced Research Workshop held at the University of Twente, The Netherlands in July 1991.

Learning Vocabulary in Another Language Google eBook I. S. P. Nation 2013-10-31 An updated edition of the key reference work in the area of second and foreign language vocabulary studies. This book provides a detailed survey of research

and theory on the teaching and learning of vocabulary with the aim of providing pedagogical suggestions for both teachers and learners. It contains descriptions of numerous vocabulary learning strategies which are justified and supported by reference to experimental research, case studies, and teaching experience. It also describes what vocabulary learners need to know to be effective language users. This title shows that by taking a systematic approach to vocabulary learning, teachers can make the best use of class time and help learners get the best return for their learning effort.
