Corpus-based Analyses of the Problem-Solution Pattern—Lynne Flowerdew 2008 This book reports research on the Problem-Solution rhetorical pattern, which has to date received very little attention in corpus-based studies. Insights from genre analysis and corpus studies are combined to bring out aspects of the Problem-Solution pattern, thus moving towards a more multi-faceted analysis of corpus-based writing. This book is written in a technically-oriented report writing, a professional corpus and a student corpus, using a key word and key-word analysis. Thesauric analyses of key words in Language, English and World Critic, WSI 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, and 2011 show that a group of the ten most frequent words in the corpus are the most frequent words in the student corpus. The pattern concludes with some pedagogical implications and applications of the findings including the importance of context in understanding the nature of key words and phrases that are often used in the field of data-driven learning.

Case-Based Reasoning—Michael M. Richter 2013-10-31 This book presents case-based reasoning (CBS) as a broad field of computer science that includes, as well as its own discipline, closely related fields and subfields. It explains what CBS is, why it matters, and what it can contribute. The book introduces the key concepts of CBS from a formal perspective, but explains them in a way that is accessible to readers with little or no background in AI logics. It explains the history and the central challenges in the development of CBS. It shows how recent developments in AI logics allow new cases to be found and how to use these cases for practical reasoning in different domains. It also explains how CBS can be used in practice and gives examples of applications.
