Conceptualizing Processes of Strategic Change. The Contribution of an Attention-Based View to Strategy Formulation Florian Körner 2015-07-06 Master's Thesis from the year 2015 in the subject Business economics - Business Management, Corporate Governance, grade: 1,7, University of Hannover (Personal und Arbeit), course: International Management, language: English, abstract: How and why do organizations change? These questions have been an enduring and central quest of management scholars and many other disciplines. To find answers concerning these questions, it is indisputable that executives need to develop strategies in order to reach their goals and successfully respond and adapt to the environment while facing 'change'. Or as Ocasio (1997) put it, "explaining how firms behave is one of the fundamental issues or questions that define the field of strategy (...) and the contribution it makes to the theory and practice of management." When companies are faced with environmental or internal changes, some organizations start changing their strategies and others do not. Accordingly, in this paper we will view strategic change as the firm's alignment with its external environment and with internal organizational issues. Hence, the starting point for why organizations take action concerns the environment within which the company operates. Over the past decades, managers and scholars assumed that the environment needed to be assessed, observed and enacted in order to gain information, process this information and to formulate a strategy to reach future goals and push the firm's overall performance. The most popular assumptions within the strategy formulation literature are that "the appropriateness of a firm's strategy can be defined in terms of its fit, match, or congruence with the environmental or organizational contingencies facing the firm." Thus, the environment inhibits global competitive pressure, dynamics and uncertainty because of the current ongo-ing internationalization of firms and their willingness and need to

expand and invest in emergent markets in order to survive gain profits. The ongoing revolution and upcoming research stream called Industry 4.0, which is highlighting the importance for and the influ-ence of the internet (e.g. the Internet of Things) on firms, is just one of the examples that shows how firms have to cope with and adapt to the complex environments. Since, for example, the internet improves the information gathering process concerning environmental and internal organizational issues, the actual scarce resource within the firm becomes the managers' amount of attention that they allocate to "searching for, sorting through, and interpreting the available information." [...] **Handbook of Strategy and Management** Andrew M Pettigrew 2001-10-05 New in Paperback: Publishing February 2006! `If you had to read only one book to understand the roots and branches of the study of strategy & organization, this would be it. Pettigrew, Thomas and Whittington have gathered an impressive array of contributions, which provide a comprehensive guide to the current state of the art. It's a book that reflects a maturing field, offering thought-provoking discussions of the major issues in strategy, reflections on how they have been tackled in the last three decades, and identifying the themes, promises and challenges that lie ahead. Useful for a novice and an accomplished scholar alike, this is a remarkable effort that shows how far the Strategy field has come' - Michael G. Jacobides, London Business School `This is an interesting, insightful and thought provoking collection. It not only comprehensively maps the field of strategic management but also offers a critical reflection on past and present work. The rich mix of contributors criticize, entice and provoke, while also scoping a future research agenda. The authors have accomplished a major and important contribution to our understanding of the history and development of strategy and research in strategy' - David Asch, Dean of the Faculty of Business and Law, De Montfort University. `The publication of the Handbook of Strategy and Management is a major event. The Handbook not only brings together the World's leading strategy and management scholars; it is also remarkably well-organized and future-oriented, having the right balance between focus and diversity. By critically taking stock of the field and by discussing future paths of strategy, this Handbook will serve as an important stimulus for intellectual development for years to come'- Nicolai Foss, Copenhagen Business School `Finally! We have a comprehensive, reflective and critical overview of the field of strategy in the new Handbook of Strategy and Management. The strategy literature has come of age with this "mapping of the terrain" by Andrew Pettigrew, Howard Thomas and Richard Whittington. The Handbook provides an useful overview of different streams of thought with contributions by leading scholars and researchers. Equally importantly, this Handbook provides us with reflections on the past and insights into the future of the field. Such a critique is an important aid in understanding and researching strategy for newcomers and experienced scholars alike' - Cynthia Hardy, Head of Department of Management, University of Melbourne The Handbook presents a major retrospective and prospective overview of the strategic management field and will be an important benchmark volume for management scholars worldwide. The Handbook frames, assesses and synthesizes the work in the field and helps to define and shape its current and future development. The editors combine focus with diversity in the material and approaches covered, thus providing a powerful critical analysis and synthesis of diverse disciplinary contributions to this rapidly growing body of knowledge. Each of the four parts of this book concentrates on a specific area of strategy and management. Within these parts, leading international scholars provide historical overviews of the key strands delineating the `topography' of their particular themes, address the central problems and approaches which have characterized these, critically assess the state and quality of current theory and knowledge, and set out agendas for future theoretical and empirical development. The resulting volume is a unique overview of the inputs and dynamics that shape the core ideas and practices of strategy and management.

The Synergy Trap, Asia-Pacific Edition Mark L. Sirower 2010-06-15 "Every CEO and Corporate Director who has been in the path of the 'WOW! GRAB IT!' acquisition locomotive should read this book!" -- Charles R. Shoemate, Chairman and CEO, Bestfoods With global acquisition activity running into the trillions of dollars, the acquisition alternative continues to be the favorite corporate growth strategy of this generation's executives. Unfortunately, creating shareholder value remains the most elusive outcome of these corporate strategies. After decades of research and billions of dollars paid in advisory fees, why do these major decisions continue to destroy value? Building on his groundbreaking research first cited in Business Week, Mark L. Sirower explains how companies often pay too much -- and predictably never realize the promises of increased performance and competitiveness -- in their quest to acquire other companies. Armed with extensive evidence, Sirower destroys the popular notion that the acquisition premium represents potential value. He provides the first formal and functional definition for synergy -- the specific increases in performance beyond those already expected for companies to achieve independently. Sirower's refreshing nuts-and-bolts analysis of the fundamentals behind acquisition performance cuts sharply through the existing folklore surrounding failed acquisitions, such as lack of "strategic fit" or corporate culture problems, and gives managers the tools to avoid predictable losses in acquisition decisions. Using several detailed examples of recent major acquisitions and through his masterful integration and extension of techniques from finance and business strategy, Sirower reveals: The unique business gamble that acquisitions represent The managerial challenges already embedded in current stock prices The competitive conditions that must be met and the organizational cornerstones that must be in place for any possibility of synergy The precise Required Performance Improvements (RPIs)

implicitly embedded in acquisition premiums and the reasons why these RPIs normally dwarf realistic performance gains The seductiveness and danger of sophisticated valuation models so often used by advisors The Synergy Trap is the first expose of its kind to prove that the tendency of managers to succumb to the "up the ante" philosophy in acquisitions often leads to disastrous ends for their shareholders. Sirower shows that companies must meticulously plan -- and account for huge uncertainties -- before deciding to enter the acquisition game. To date, Sirower's work is the most comprehensive and rigorous, yet practical, analysis of the drivers of acquisition performance. This definitive book will become required reading for managers, corporate directors, consultants, investors, bankers, and academics involved in the mergers and acquisitions arena.

The Handbook of Mergers and Acquisitions David Faulkner 2012-06-07 The Handbook bridges hitherto separate disciplines engaged in research in mergers and acquisitions (M&A) to integrate strategic, financial, socio-cultural, and sectoral approaches to the field. It examines the management processes involved, as well as valuations and post-acquisition performance, and considers international and sectoral dimensions.

Rise and Fall of Strategic Planning Henry Mintzberg 1994-01-31 In this definitive and revealing history, Henry Mintzberg, the iconoclastic former president of the Strategic Management Society, unmasks the press that has mesmerized so many organizations since 1965: strategic planning. One of our most brilliant and original management thinkers, Mintzberg concludes that the term is an oxymoron -- that strategy cannot be planned because planning is about analysis and strategy is about synthesis. That is why, he asserts, the process has failed so often and so dramatically. Mintzberg traces the origins and history of strategic planning through its prominence and subsequent fall. He argues that we must reconceive the process by which strategies are created -- by emphasizing informal learning and personal vision -- and the roles that can be played by planners. Mintzberg proposes new and unusual definitions of planning and strategy, and examines in novel and insightful ways the various models of strategic planning and the evidence of why they failed. Reviewing the so-called "pitfalls" of planning, he shows how the process itself can destroy commitment, narrow a company's vision, discourage change, and breed an atmosphere of politics. In a harsh critique of many sacred cows, he describes three basic fallacies of the process -- that discontinuities can be predicted, that strategists can be detached from the operations of the organization, and that the process of strategy-making itself can be formalized. Mintzberg devotes a substantial section to the new role for planning, plans, and planners, not inside the strategy-making process, but in support of it, providing some of its inputs and sometimes programming its outputs as well as encouraging strategic thinking in general. This book is required reading for anyone in an organization who is influenced by the planning or the strategy-making processes.

The Strategy Process in Dynamic Markets Katja Kanngiesser 2007-12-08 Diploma Thesis from the year 2006 in the subject Business economics - Business Management, Corporate Governance, grade: 1,7, European Business School, 136 entries in the bibliography, language: English, abstract: This paper is picking up a combination of three perspectives on strategy that are trying to perform a shift of paradigm towards a new way of strategic thinking serving as the basis for a strategy process in dynamic markets. The combination of these three perspectives has been termed the complexity theory of strategy by Davis and Eisenhardt. This theory combines Austrian economic thinking, the dynamic capabilities view, and complexity theory. Austrian economics perceive markets as a rapid flow of heterogeneous and surprising opportunities that need to be captured by strategic managers. The dynamic capabilities perspective perceives organizational resources as simple capabilities that enable quick, flexible, and creative improvisation to respond effectively to this rapid flow of opportunities. Complexity theory perceives organizations and the economy as simple systems, which produce complex and adaptive responses to environmental change. The complexity theory of strategy, in general, focuses on "[...] simple rules in guiding improvisational actions in the effective execution of a series of often fleeting opportunities." The three particular theories contribute to strategic management thinking to overcome the shortcomings of traditional strategic management thinking in dynamic markets. The purpose of this paper is to create a strategy process from the perspective

of the complexity theory of strategy which meets the requirements of dynamic markets. How do the three underlying theoretical approaches from this theory contribute to form a strategy process for dynamic markets? In order to answer this question, elements from the three theories will be analyzed and assembled in a new framework for creating strategy which is more adequate in dynamic markets than classical process models. The major result of this paper is that there cannot be a process model of sequenced steps for creating strategy because it would be too rigid to consider critical features for creating strategy in dynamic markets. Rather, the result is a loose framework for creating strategy in dynamic markets that is formed out of elements from the complexity theory of strategy. The framework does not rely on a single strategic process sequence nor is it completely reactive. Rather than ignoring change it helps creating a relentless pace of change and, thus, may be able to meet the requirements of dynamic markets.

Project Set Strategies F.G.J. Derkinderen 2012-12-06 Project Set Strategies focuses on an issue of vital concern to corporate managers: the development and implementation of strategy. Regretfully, this topic has received too little attention in the literature of finance and has been treated in completely in the management journals. In fact, not everyone recognizes that it falls within the sphere of finance. However, since the important issues discussed in this book strategically shape the destiny of the company and can seal its fate long before the point is reached where conventional finance considerations come into play, it is essential that this recognition be acknowledged. From the management point of view, it has long been realized that strategic elements play a crucial role in the continued well-being of the firm. Nevertheless, this truth is overlooked to some extent with most management techniques since there is insufficient typification, often leading to unjustified generalizations and inadequate attention to the requirements of the specific situation. Also, these management techniques are not grounded upon the long-established financial economic theories of valuations and thus can lead to misdirected guidance. Since the two

academic disciplines of "management" and "finance" have much insight to offer each other, this book represents an effort to link the strategic management area to a theoretically sound and usable financial-economic foundation. In this way, the probability of errors of omission or unjustified generalizations is decreased and help is offered for ascertaining more relevant goal-directed recommendations.

However, starting a business is a challenge. Without proper procedures and guidelines, a new business owner cannot identify and maintain a game plan to success. Creating a rough outline or game plan by the issuing of a mission statement is part of the strategic management process. To coincide with a mission statement, a vision statement is created that describes what the organization

wants to become. This paper will review how important these factors are as well as the four concepts of business: planning, leading, controlling, and organization are to the creating and implementation of a strategic business plan.
