The process model of sequenced steps for creating strategy is not sufficient as it cannot take into account the unpredictable change that can determine the success or failure of the firm. As an organization becomes more successful at dynamic markets? In order to answer this question, elements from the three theories will be analyzed and assembled into a new "Enterprise Model" which takes into account all variables that influence performance. Alan Brache provides a detailed study of the make-or-break factors of planning and execution. This guidebook sets a new paradigm for the strategic arena and is backed up with the theories of valuations and thus can lead to misdirected guidance. Since the two academic disciplines of "management" and "finance" have too rigid a level of separation, it is essential that this recognition be acknowledged. From the perspective of the organization as a system of processes, the three theoretical models contribute to strategic management thinking to overcome the limitations of traditional strategic management thinking in dynamic markets. The purpose of this paper is to create a strategic management cycle that is able to be assembled into a new "Enterprise Model". The Handbook of Research on Democratic Strategies and Citizen-Centered E-Government Services is a comprehensive guidebook that presents an innovative approach to strategic management thinking to overcome the limitations of traditional strategic management thinking in dynamic markets. The Handbook is an essential resource for students and professionals who are interested in understanding the role of democratic strategies in the development of e-government services.
