Antistatic Sprays: National Aeronautics and Space Adm NASA 18-10-25 Antistatic sprays are applied as a fogging agent to surfaces that need to be protected from contamination potential. They are used to protect electronics, digital equipment, and other surfaces from static charges.

In addition, the chemical composition of the antistatic sprays is determined by infrared spectrophotometry, mass spectrometry, and ultraviolet spectrophotometry. The tests for antistatic sprays for contamination potential. Of these sprays, 7 are also noncorrosive to an aluminum surface. And of these, only 2 demonstrate good electrostatic properties with respect to the protection of surfaces. The results indicate that antistatic sprays can be used on a limited basis where contamination potential, corrosiveness, and electrostatic effectiveness is not critical. Each application is different and proper evaluation of the situation is necessary. Information on some of the properties of some antistatic sprays is presented in this document to aid in the evaluation process.
